No. 15 and other passenger trains with diesel engines must not exceed maximum speed of 80 miles per hour. No. 17 must not exceed maximum speed of 75 miles per hour with F-6 engines. Other passenger trains must not exceed maximum speed of 70 miles per hour. Freight trains with S-2

or S-3 or diesel engines must not exceed maximum speed of 55 miles per hour, other freight trains 50 miles per hour. Maximum speed for F-5 and F-6 engines is 75 miles per hour, S-2 and S-3 engines 70 miles per hour.

EASTWARD TRAINS ARE SUPERIOR TO WESTWARD TRAINS OF THE SAME CLASS.

Double Track is in use between Minneapolis and Tower E 14, between E 118 and E 122 and between Rock Cut and Montevideo. Between E 118 and E 122, trains will keep to the LEFT, unless otherwise directed. Automatic Block System is in use between South Minneapolis and Montevideo. No. 15 when not displaying signals for a following section will register at Montevideo by register ticket. No. 15 will stop at Glencoe to get first class mail dispatched at Glencoe from No. 5 for No. 15.

Centralized Traffic Control is in use between east siding switch at Glencoe and Montevideo.

No. 17 will stop at Granite Falls to let off revenue passengers from Minneapolis or beyond or pick up revenue passengers for Spokane or west. No. 6 will hold at Granite Falls for U. S. Mail from G. N. No. 52, if that train arrives at G. N. station before No. 6 is due to leave.

Glenn Lake Spur switch is located 1361 feet west of Tower E-14. No. 5 will stop at Norwood daily except Saturday.

FIRST SUBDIVISION—EASTWARD

SPECIAL INSTRUCTIONS

15

ALL SUBDIVISIONS

G1 Engineers operating engines equipped with the oscillating emergency red headlight will be governed by the following:

When the air brakes are applied from any cause other than in normal operation by the engineer, or when it is found necessary to stop train due to some defect, or under circumstances which might cause a derailment and the fouling of adjacent main track, engineer must immediately display the oscillating red headlight.

Engineers on approaching trains will take notice and immediately bring train to a stop, and will not proceed until track is found to be safe and clear for their movement.

These instructions are applicable at all times, both day and night. The emergency headlight should not be used for any other purpose.

The operation and use of this device does not in any way relieve trainmen and enginemen from full compliance with Rules 99 and 102.

The following will govern the use and handling of the "Emergency Red Rear End Light" on trains so equipped:

Emergency Red Rear End Lights. Trainmen on trains equipped with oscillating emergency red rear end lights must familiarize themselves with the location of the switches which control the lights and will be governed by the following:

The emergency red rear end light will be used on trains so equipped in the following manner:

To provide protection to trains on adjacent tracks as required by Rule 102.

To provide supplemental protection under Rule 99 in all circumstances where its use is necessary to stop following trains on one or more tracks.

A following train observing this emergency red light displayed must immediately reduce to restricted speed and be governed by instructions of flagman.

The use of this emergency red light does not in any way relieve the flagman from full compliance with Rules 99 and 102.

Portable emergency red lights must be removed before coupling onto the car.

G2 The Mars white light on engines so equipped shall be used at all times between the hours of sunset and sunrise, and during daylight hours on days that are dark, or during sleet, snow, fog or rain, such as would impair the vision of motorists and hinder them from observing approaching trains, except the light must be turned out when moving through certain portions of large terminals and yards where yard engines are employed, approaching junctions, or meeting points, or while standing at those points, and when approaching trains in the opposite direction on double or three or more tracks.

In case of failure of the regular headlight, the Mars white light should be used in stationary position as the headlight.

G3 Where Approach signals are used in connection with facing point switches or manual block signals, the switch or block signal will be considered as the Home signal.

G4 Employees are prohibited from:

Removing any of the appliances of engines or cars that will endanger the safety of themselves or others.

Standing on top of high cars while passing under bridges or through tunnels.

Getting on the end of an engine or of a car as it approaches them.

Going between or running ahead of moving cars to couple, uncouple, open, close, or arrange knuckles of couplers.

Working on the side of cars or trains where there are buildings, sheds, cattle chutes, or other projections.

Kicking or holding drawbar in position to make a coupling with an approaching car or engine.

Following other dangerous practices.

G5 When, for any reason, adjustment is necessary to a drawbar, knuckle pin, or locking block prior to making coupling or when coupling does not make, the engine or cars must be separated not less than 20 feet and action taken to prevent the cars from moving before going between the cars to make the adjustments.

G6 Whenever a car without a drawbar or draft timber is to be moved by a train or engine and it is necessary to chain the car to other cars or engines, employees are prohibited from going between such car and other cars or engines until the persons performing the work have a thorough understanding with the engineer and other members of the train crew. During the process of chaining up the car, the car itself must be properly secured while being chained to other cars, and if the car is to be chained to the engine, then the car must be secured and the brakes on the engine set to avoid a movement of any kind. The engineer must not release the brakes until he has received verbal information that all employees are out from between the cars or engines, and under no circumstances must employees again go between such car or cars and engines until the engineer and other members of the train crew have been notified and the car properly secured and the engine brake set.

G7 Employees must not handle or board cars or engines that bear BAD ORDER cards without first ascertaining the nature of the defect so that they may guard against injury.

G8 When using hand holds and ladder or stirrup steps to descend from engine, car or other equipment, employees must face the equipment and be sure of a secure handhold and footing.

G9 Employees must not step on track rails nor other similar objects when it can be avoided.

G10 When run-ways, gang-planks or skids are used in handling freight to or from cars, they must be secured to prevent slipping.

G11 Lighting enginemen's torches by holding them in the fire box is hazardous and must not be permitted.

G12 Employees are prohibited from riding:

On engine footboards or pilot steps between engine and car when cars are being pushed.

On leading footboard or pilot steps while coupling engine to cars.

On deadwoods, drawbars, brake beams, journal boxes and brake wheels.

On ends of cars containing lading which may shift.

On engine pilot or footboards, sides or ends of cars, while going in or out of depressed tracks.

On forward footboard or pilot steps of engine in direction the engine is moving except in cases where operating conditions make it necessary for safety and then only one employee must ride on the footboard.

In the gangway of engine.

G13 When necessary to go outside when locomotive is either standing or moving, extreme caution must be exercised to avoid slipping or falling from cab ledge (catwalk) or running board. Cab ledge (catwalk) is not to be used on standing locomotives when access to the running board can be had by other means.

G14 The use of gasoline stoves in Railroad Company's equipment or buildings is prohibited; the use of oil stoves other than modern kerosene stoves (preferably those bearing the Underwriter's label) is also prohibited.

This does not apply to U. S. Army Field Ranges when installed under the supervision of a U. S. Army commissioned officer and operated by his men.

G15 The provisions of Rule 815 also apply to transfer movements within yards.

G16 All 44-ton Diesel engines dead in freight trains must be handled at rear of train just ahead of the caboose and when a pusher engine is placed on the rear of the train, the 44-ton Diesel engine must be placed behind the pusher. When there is a 44-ton dead Diesel engine in the rear of the train, the train must not be pushed nor pulled from the rear, and the dead Diesel engine must not be handled in switching movements in conjunction with other cars.

The following equipment must not be towed or operated under its own power through water in excess of the maximum height of water above rail shown below. When towed or operated under own power through water of lesser depth than that shown below, a speed of three miles per hour must not be exceeded.

Diesel power units 600 and 1000 H.P. Switchers, 4½ inches, all other Diesel engines and Gas-Electric Motor cars, 8 inches.

When operating through water under own power, controller should be in Series position.

G17 The following cars, loaded or empty, will be handled next ahead of the caboose giving preference in the order shown, except that at least one car must be handled between a flat car loaded with rails and the caboose:

Bad order cars.

Wood underframe flat cars.

Switch rear "S.R." cars.

G18 Unoccupied outfit cars of steel underframe or steel center sill construction when inspected and passed by a Car Department inspector, may be hauled in any part of the train.

G19 For the comfort of the passengers, the air-conditioning on our air-conditioned passenger trains should be kept operating as long as possible. When approaching stations where cars are to be picked up or set out between the engine and the rear car, the steam line must be blown out at the proper place and the steam shut off before the train stops. At the final terminal of the equipment, when no cars are to be set out between the engine and the rear car, the fireman will simply shut off the steam as soon as the train stops in the station.

G20 In case of heavy rain or violent windstorm, the operator must notify the section foreman.

G21 A yellow flag by day stencilled **ELECTRIC CHARGE LINE** and in addition, a yellow light by night, placed at one or both ends of a passenger car standing on a yard track, indicates that the battery of the car is connected to a charge line. When thus protected, it must not be coupled to or moved before the charge line has been removed. Other equipment must not be placed on the same track so as to intercept the view of the yellow signals without first notifying the workmen; in the absence of the workmen, the signals may be moved to the end of the equipment so placed to afford the necessary protection.

DEFINITIONS

G22 Centralized Traffic Control.—A block or a series of consecutive blocks, the signals of which, together with certain switches, are controlled from a central location.

Remote Control Interlocking.—A system of operating outlying signal appliances from a designated point.

C.T.C.—Abbreviation for Centralized Traffic Control.

CENTRALIZED TRAFFIC CONTROL

G23 (a) On portions of the railroad so specified in the timetable, trains will be governed by block signals whose indications will supersede the superiority of trains for both opposing and following movement on the same track.

(b) Except as affected by Special Instructions G23 (a), all block signal rules and operating rules remain in force.

(c) The movement of trains and engines will be supervised by the train dispatcher who may also control the C.T.C. When the C.T.C. is controlled by other than the Dispatcher, the Dispatcher will issue the necessary instructions to the operator at the control station, location of control station will be designated by Special Instructions.

(d) Train or engines must not enter C.T.C. territory unless the governing signal displays a Proceed indication or unless authority is obtained from the authorized employee at the control station.

(e) In case of failure of a Stop signal, authority to proceed will be issued orally by the authorized employee at the control station.

(f) Trains or engines must not move beyond the limits of C.T.C. territory without the proper authority including the information required by Rules S-83 and D-83.

(g) When the governing signal displays a Stop indication and the operator knows that the interlocked switches are in proper position and there are no opposing or conflicting train or engine movements involved, he will authorize the train or engine to proceed in the following form:

"You may proceed at restricted speed to the next signal."

If the operator does not positively know that there are no opposing or conflicting train or engine movements involved or that the interlocked switches are in proper position, he will issue authority to proceed in the following form:

"You may proceed under protection of a flagman to the first signal that displays a Proceed indication."

These instructions must be repeated by the conductor or engineer to insure correct understanding.

See Rule 668(A).

(h) When the governing signal displays a Stop indication for an approaching train or engine and the means of communication have failed, the train or engine may proceed at restricted speed, when preceded by a flagman, to the next signal that displays a Proceed indication, or to the next point of communication. Flagman must be sent far enough in advance to insure full protection.

(i) Where main track switches are not interlocked or equipped with electric locks, when a train or engine enters a siding or other track or makes a crossover

movement, the operator in charge must be notified when the movement is complete and the main track switches have been closed and locked. The switches must not be opened nor will the train or engine enter upon or foul the main track without first receiving authority from the operator.

- (j) A train or engine must not move in the opposite direction to that authorized by the governing signal without proper authority from the operator, unless preceded by a flagman sent far enough in advance to insure protection.
- (k) Instructions for the operation of the electric locks on hand operated switches are posted in telephone booths or on the inside of the door of the locks.
- (l) Dual Control switches are located at Interlocking in C.T.C. territory. See Rules 663 (A), 663 (B) and 663 (C).

GENERAL SPEED RESTRICTIONS

G24 When freight cars (except cars that are equipped for passenger train service) are hauled in a passenger train, the maximum speed of that train will be that prescribed for freight trains in that territory unless a different speed is authorized by bulletin or train order.

G25 Diesel or Electric engines with unobstructed view in either direction may be operated at permissible speeds in either direction.

Diesel or Electric engines with restricted view in one direction must, when operated in that direction, reduce speed to the extent necessary for safe operation.

Dead engines must not be hauled in trains without instructions from the chief dispatcher and must be accompanied by a competent rider, except a rider is not required for Gas-Electric or Diesel engines.

Diesel engines moving dead in train will come under the provisions of Rule 806 and when the doors of the locomotive are locked and the hand brake is not accessible, a freight car with operative hand brakes must be coupled to the diesel with uncoupling mechanism made inoperative.

A rider is not required for dead engines handled by yard crews in terminals, except where condition of dead engine or other circumstances may require for safe movement.

Engines with side rods removed from one side only, must not be hauled in trains.

Dead engines equipped with wood underframe tenders, when hauled in trains, should be placed in the rear of the train just ahead of any Switch Rear cars.

G26 Gas-Electric motor cars should not be hauled dead in trains unless disabled. When necessary to haul such cars dead in freight trains, they should be hauled on the rear of short freight trains.

G27 Dead engines must not be hauled backward in trains if it can be prevented and then only at slow speed.

Conductors will notify engineers when one or more dead engines are to be hauled in trains and the conditions under which they are being handled, so that the speed may be regulated accordingly.

G28 When dead engines with side rods disconnected are hauled in trains there must be at least 8 cars between engines so hauled.

G29 Dead engines of Class K type or larger when hauled in trains should be placed approximately 10 cars from the road engine.

G30 Unless otherwise restricted the following equipment must not be moved in excess of the maximum speed shown below and further reduction must be made where conditions require:

Type of equipment	M P H
Trains handling loaded air dump cars (must stop when meeting trains on double track)	25
Work trains with workmen or occupied outfit cars	25
Lidgerwood unloaders	15
Scale Test cars on branch line 20, on main line	25
Class I engines	25
Passenger trains handled or helped by freight engines with single trucks	60
F5 and F6 engines (on divisions or portions of divisions where authorized to be used)	75
K-1 engines on passenger trains (but must not be used except in extreme emergency)	45

L-2 and L-3 engines (on divisions or portions of divisions where authorized to be used)	50
S2 and S3 engines (on divisions or portions of divisions where authorized to be used)	70
Dead engines with side rods disconnected	15
Dead engines with side rods in position	25
Dead engines with all side rods connected, pistons removed and valve motion disconnected	45
Engines with side rods off and main rods connected when working steam, running light or in train	15
Engines (other than Mallet type) with side rods in position and one main rod removed, light or hauling cars	25
Mallet type engines working steam with one main rod removed	20
Diesel switchers, either dead in train or operating under their own power (except 600 HP Alco switchers, 1600 to 1603 inclusive)	45
600 HP Alco switchers, series 1600 to 1603 inclusive	40
All 44-ton Diesel engines:	
When dead in train	25
When under own power	30

G31 Unless otherwise specified, the speed of all trains or engines approaching interlocked railroad crossings must be reduced, and passenger trains must not exceed 45 miles per hour and other trains or engines 25 miles per hour when passing over such crossing. The stated speed must be further reduced where conditions require. This does not apply to railroad crossings protected by automatic signals or gates, trains and engines will approach such crossings at restricted speed and if proper proceed indication is received, may pass over the crossing at the speed prescribed by Special instructions or bulletin.

The speed of all trains must not exceed 20 miles per hour while passing over railroad crossings protected by signals or gates unless otherwise specified.

G32 The speed of trains handled by Gas-Electric or other similar type power, when consisting of power unit only, must not exceed 10 miles per hour when approaching and passing over railroad crossings protected by automatic signals.

G33 That enginemen may have knowledge of the maximum permissible speed around curves and at points where normal authorized speed must be restricted, a yellow sign with the black letters R.S. and black figures and placed at an upward angle of 45° on the right hand side of the track, indicates that the permissible speed beginning 3000 ft. distant corresponds in miles per hour, to the figures shown. A yellow sign with the black letters R.S. and placed in a vertical position on the right hand side of the track, indicates that normal speed may be resumed.

These signs do not apply to trains which by time-table or other instructions, are restricted to a slower speed.

Where these signs have two sets of figures the outside figures apply to the movement of freight trains and those nearest the track apply to passenger trains.

G34 Spring switches:

Movement in facing point direction over a spring switch equipped with facing point lock may be made at normal speed. Movement in facing point direction over a spring switch not equipped with facing point lock must not exceed 25 miles per hour. If switch is lined for turnout, the allowable turnout speed must be observed.

Movement in trailing point direction over a spring switch on track for which the switch is lined may be made at normal speed.

Movement in trailing point direction which springs the switch points must not exceed 40 miles per hour.

If movement is through turnout the allowable turnout speed must be observed.

See Rules 520 to 525 inclusive.

G34(a) Spring switch must not be thrown by hand when wheels are standing on any part of the switch points, nor before the points have completed their full movement after being trailed through.

G35 In addition to Consolidated Code Rule 801 about the handling of occupied outfit cars, the following will also apply on this Railroad:

When occupied outfit cars are set on a siding, the switches at each end should be spiked to prevent any possibility of a train striking the cars.

The same principle will also apply when such cars are placed on other side tracks; but when, for operating reasons, it is not practicable to have the switches spiked, the train dispatcher must be notified.

When occupied outfit cars are standing on other than siding and the switches on each end are not spiked, a yellow signal must be displayed on each end of the outfit cars. Under such conditions, the cars must not be moved except when necessary and then only after the man in charge has given his permission. When other cars are placed on the same track, the yellow signal must be moved to the end of the string of cars on that track where it can be plainly seen.

G36 When a train order office is closed during the period authorized by timetable or bulletin, the light in the train order signal will be extinguished.

G37 Excessive use of sand at any point is prohibited and its use must be restricted to actual necessity.

G38 When passenger trains are unusually delayed passengers should be informed as to cause and extent of delay.

Conductors will make suitable announcements to passengers on trains, or arrange for brakeman and sleeping or parlor car employees to do so.

Agents or station masters will see that such announcements are made to passengers in stations when waiting for trains.

Public address system should be utilized both at stations and on trains when available.

G39 In complying with Rule 3 of the Consolidated Code of Operating Rules and General Instructions, the prescribed form for yardmasters and foremen of yard engines to register the time when watches are compared will be the place provided on back of time slip Form 3256.

G40 When two or more diesel engine units are coupled together the numerals and suffix letter of the leading unit will be illuminated at all times when in service. The numerals and suffix letter of trailing units must not be illuminated.

The number and suffix letter of the leading unit only to be used in train orders.

G41 Where Automatic Block and Interlocking rules and signal indications require movement at RESTRICTED SPEED, such movement must be made prepared to stop short of train, obstruction or switch not properly lined, and be on the lookout for broken rail or anything that may require the speed of a train to be reduced but a speed of 15 miles per hour must not be exceeded.

X1 Trains handling steam derricks must not exceed the following speed limitations. The indicated maximum speeds must be further reduced on tangents and on curves where track is not in proper condition for the specified maximum speeds.

	On Tangent Track	On Curves
Between So. Mpls. and St. Louis Park	35 M.P.H.	25 M.P.H.
Between St. Louis Park and Mo- bridge	40 M.P.H.	25 M.P.H.
Between Aberdeen and Mitchell	25 M.P.H.	20 M.P.H.
Between Farmington and Cologne	25 M.P.H.	15 M.P.H.

Steam derricks that are not restricted may be operated over other subdivisions at not to exceed twenty (20) miles per hour on tangent and ten (10) miles per hour on curves, or at a slower speed if conditions require.

X1 (A) Steam derrick X18 stationed at Mpls. may be operated on 1st, 2nd, 3rd, 4th and 9th Sub-Divisions only.

X2 Trains handling rotary snow plows, locomotive cranes, Jordan Spreaders, shovels, pile drivers and ditching machines must not exceed speed limitations shown below. The indicated maximum speeds must be further reduced on tangents and curves where track conditions do not justify the specified maximum speeds. Engine and train crews will make frequent observations of how these machines are riding and when in damaged or questionable condition, or when this equipment is hauled in trains with the heavy end trailing, the speed must be further reduced to insure safe movement.

	On Tangent Track	On Curves
On First, Second, Third and Ninth Sub-divisions	35 M.P.H.	25 M.P.H.
Between all other points	20 M.P.H.	15 M.P.H.

X3 The speed of all trains or engines passing through turnouts must not exceed 13 miles per hour, except those turnouts laid with long frogs and designated by Special instructions or bulletin where the speed may be increased to 25 miles per hour, unless otherwise authorized.

Turnouts laid with long frogs are located at:

Station	Location	Permissible Speed
Tower E14	End of Double Track Westward Track	50 M.P.H.
Hazeltine	East End of Siding	25 M.P.H.
Stewart	East End of Siding	25 M.P.H.
Hector	East End of Siding	25 M.P.H.
Bird Island	West End of Siding	25 M.P.H.
Bird Island	West End of Yard Track, #1	25 M.P.H.
Danube	East End of Siding	25 M.P.H.
Sacred Heart E118	West End of Siding	25 M.P.H.
	End of Double Track Westward Track	
	Passenger trains	50 M.P.H.
	Other trains	40 M.P.H.
E122	End of Double Track Westward Track	
	Passenger trains	50 M.P.H.
	Other trains	40 M.P.H.
Rock Cut	End of Double Track Eastward Track	50 M.P.H.
Swift	End of Double Track Westward Track	50 M.P.H.
Milan	East end and west end of siding	25 M.P.H.
Milbank	End of Double Track Eastward Track	35 M.P.H.
Summit	End of Double Track Westward Track	35 M.P.H.
Bristol	End of Double Track Eastward Track	35 M.P.H.
Groton	End of Double Track Westward Track	35 M.P.H.
Bath	End of Double Track Eastward Track	35 M.P.H.

X3 (A) All spring switches except those indicated below are equipped with facing point locks, permitting maximum permissible speed in the territory involved while moving against the points. The speed must not exceed 25 MPH while moving against the points at the following spring switches. (See special instructions G34.)

Aberdeen West End of Double Track.

X4 Five minute fuses should be used in Automatic Block Territory and on fourth, fifth, seventh, eighth, tenth, eleventh and twelfth subdivisions.

X5 The speed of steam engines when running backward, either light or handling train, must not exceed 25 miles per hour on the 1st, 2nd, 3rd and 9th Subdivisions or 15 miles per hour on other subdivisions without instructions from proper authority.

X6 Following is location of emergency connections for taking diesel engine boiler water between Minneapolis and Mo-bridge:

Glencoe	—Main line west water column.
Bird Island	—At service tank.
Minnesota Falls	—In fire hydrant house north side of track opposite treating plant.
Montevideo	—Both east and west main line water columns.
Milbank	—East bound main line water column.
Summit	—Inside small storm shed at main line water column.
Bristol	—East bound main line water column.
Roscoe	—West bound main line water column.
Mobridge	—Both east and west bound water column pits.

FIRST SUBDIVISION

19

X7 Speed Restrictions (In addition to General Speed Restrictions).

	Passenger Trains	Other Trains
Tower E-14—Westward Track	50	40
Tower E-14—Eastward Track	70	45
Between E118 and E122 and over G. N. crossing at E122		
Trains using westward track through turn- outs at each end and over G. N. cross- ing at E122	50	40
On 6° and 4° curves, east and west of MP 541	40	40
Trains using eastward track and over G. N. crossing at E122	70	50
Norwood M & StL RR crossing	60	45
Minneapolis through switches be- tween 6th Ave. and 8th Ave.	8	8
Minneapolis approaching and passing over employes crossing middle of 8th St. coach yard	10	10
So. Minneapolis over Cedar and Franklin Aves	8	8
So. Minneapolis over Hiawatha Ave.	10	10
So. Minneapolis over Junction Switch	15	15
Between So. Minneapolis and Minneapolis	Restricted Speed	Restricted Speed
Between So. Minneapolis and St. Louis Park	60	25
St. Louis Park, over Wooddale and Brunswick Avenues	25	25
Hopkins between 7 AM and 5 PM at Thresher works crossings, eastward trains	40	40
Westward trains	25	25
Glencoe over street crossings	25	25
Glencoe—Trains using siding over Greeley Ave.	10	10
Montevideo—2100 ft. east to 1200 ft. west of passenger depot	20	20
Class S2 and S3 engines when running light		45
G6 Engines when running light		25

X8 Class S-2 and S-3 engines must not be operated on the following tracks:

Bass Lake	All yard tracks except 16, 17, 18, 19, 20, 21, 22, 23 and 24.
Chanhasen	House track—400' on stub end.
Augusta	House track—500' on stub end.
Cologne	The Farmington Line main tracks east of the second crossing, east of the east yard switch. Old eastward siding—1500' on east end. Yard tracks 2 and 3—1500' on east end. Yard tracks old 5 and 6—entire length. Mill track. Wye tracks.
Norwood	Mill track.
Plato	House track—west of derail. Mill track—between derails.
Glencoe	All tracks on north side of depot west of depot. Tile track. Mill track.
Brownnton	Middle track.
Hector	Mill track.
Bird Island	Coal dock track from coal hopper east.
Minnesota Falls	House track.
Granite Falls	Siding from depot east. Standard Oil spur. House track from stockyard east.
Wegdahl	House track from elevator to east derail.
Montevideo	House track west of frt. house. Mill spur and all spur tracks leading from same.

Elevator track (Equity).

Old main line.

Sanding track—except 60' from switch.

Roundhouse track No. 6.

Roundhouse coal track.

- X9 At Minneapolis the City Ordinance prohibits the sounding of locomotive whistles within the city limits except in case of emergency or in order to prevent accidents.
- X10 South Minneapolis is a register station only for trains starting or terminating at that station.
- X11 Rules 251, 253 and 254 are in effect on eastward and westward tracks between Tower E-14 and South Minneapolis for movement with the current of traffic.
- X12 At Minneapolis, trains or engines moving into the Depot must receive signal from switch tender at Washington Avenue, and after receiving signal to proceed, move at restricted speed.
- X13 At South Minneapolis, trains or engines in either direction must approach the crossover at 24th Street prepared to stop and proceed only on signal from switchtender.
- X14 All trains or engines in either direction will approach hand throw crossover switches located just east of Cedar Avenue, South Minneapolis, prepared to stop, unless switches are properly lined and signals indicate Proceed.
- X15 Freight trains and yard engines will call yardmaster at South Minneapolis from telephone located at Cedar Avenue and get permission from him to proceed.
- X16 The movement of passenger trains and passenger equipment backing into the Minneapolis depot must be controlled by trainman handling air from the rear car. A complete stop must be made at Washington Avenue bridge, and proceed only into depot tracks at restricted speed.
- X17 Train orders for movements between Minneapolis and St. Louis Park will be issued over the signature of the Superintendent of the H & D division.
- X18 Between South Minneapolis and Bass Lake all trains and engines will operate at a reasonable rate of speed over street crossings.
- X19 Trains and engines will move on south and east legs of wye at South Minneapolis as defined by Rule 93 of the Consolidated Code of Operating Rules and General Instructions.
- X20 At Lake Street crossing between Minnehaha and South Minneapolis, all trains and engines must stop short of the crossing and one member of the crew must walk ahead to the sidewalk and ascertain if the track is clear and that the Griswold signals are in Stop position before giving signal to his crew to proceed over the crossing.
- X20 (A) Cars left on No. 1 track at Cologne must not be left closer than 250 feet east of Adams Street crossing. Cars left on tracks south of No. 1 track must not be left closer than 65 feet from the east edge of the Adams Street crossing.
- X21 C.T.C. Operation on first subdivision is controlled by train dispatcher at Montevideo.
Special Instructions G23 in conjunction with the rules of the Consolidated Code of Operating Rules and General Instructions will govern the movement of trains or engines within this territory.
- X22 At Glencoe trains using siding must not exceed 10 mph over Greeley Ave. crossing east of depot.
- X22 (A) Extra trains may be run between Glencoe and Montevideo without train orders when CTC operation is in use.
- X22 (B) At Tower E14 a light will not be displayed on train order signal until Interlocking route is lined for movement of a train.
- X23 In automatic block signal territory Manual Block System Rules will apply when trains are run against the current of traffic.
- X24 At Plato, Granite Falls, and Wegdahl, the siding is also used as a house track; the train dispatcher need not be notified when cars are left on any of these sidings.
- X25 A 50-mile-per-hour reduce speed sign is located about 4500 feet west of MP 538 on the single track for westward trains and this sign covers movement over the westward track only.
A 50-mile-per-hour reduce speed sign is located about 3000 feet west of E122 and this sign for eastward operation covers movement over the westward track only.

SECOND SUBDIVISION

X26 Speed Restrictions (In addition to General Speed Restrictions).

	Passenger Trains	Other Trains
Montevideo—2100 ft. east to 1200 ft. west of passenger depot.....	20	20
Appleton—GN RR crossing	70	55
From 1000 feet west of MP 573 between Milan and Appleton to 200 feet west of MP 594 between Odessa and Ortonville..	70	
Milbank—over Main St. crossing	40	40
From Summit to Twin Brooks, eastward trains	70	45
Webster over street crossings	35	35
On curves from 4½ miles west of Bristol to mileboard east of Andover on westward track	55	45
Groton C & NW RR crossing	70	55
Aberdeen C & NW & G N crossings.....	20	20
Aberdeen over Main Street and Kline street crossings	10	10
Class S2 and S3 engines when running light.....		45
G6 Engines when running light		25

X27 Class S2 and S3 engines must not be operated on the following tracks:

Montevideo	(See Special Instructions X8).
Watson	Canton Yard spur—except 60' west end.
Appleton	Gravel loading track north of Hiway 7. Storage track except from switch to 1000' east.
Ortonville	Lake track—from bridge to west end. Big Stone spur from Minnesota River bridge to end. All wye tracks. Doubling track.
Milbank	All engine house tracks. Coal shed unloading track from shed east. Boiler house and derrick tracks. Stockyard track from stock chute to west end.
Twin Brooks	House track.
Marvin	House track.
Ortley	Elevator spur. House track.
Waubay	Gravel pit track from switch at house track.
Webster	Auxiliary track.
Holmquist	House track.
Bristol	Engine house tracks. H & D Storage tracks.
Andover	West end house track to stockyard. Engine house lead and all branch line tracks. East leg of wye.
Groton	House track from east switch to depot.
James	House track.
Aberdeen	West yard track No. 10 east end and Nos. 11, 12, 13, 14, 17, 18 and 19. All industry tracks except pocket on City track. All freight house tracks. All repair tracks except wheel pit track and No. 1. Coal storage tracks. Cinder track. 7 wheel storage tracks. South lead to roundhouse off Mitchell Line. Boiler house track. Northwestern Public Service Co. tracks. Supply yard tracks. Coach yard tracks. Ice House west end. C&NW transfer. GN transfer.

X28 Extra trains may be run between Montevideo and Milbank without train orders when CTC operation is in use.

X29 Eastward freight trains of 4000 tons or more will stop at Marvin for inspection and to permit wheels to cool.

X30 At Odessa, engines must not be permitted more than 250 feet beyond the south switch of siding on Cold Spring spur.

X31 At Groton, the normal position of the electrically locked crossing gates is against trains on the C&NW.

X32 A check of the Train Register at the following stations will suffice when passing from double track to single track at points named.

At Milbank—for westward trains entering single track at Summit and Groton.

At Aberdeen and Aberdeen Yard—for eastward trains entering single track at Bath and Bristol.

When opposing trains are due after the registers at the designated stations have been checked, Rule S-83 will govern.

X33 In automatic block signal territory Manual Block System Rules will apply when trains are run against the current of traffic.

X34 At Groton, James, and Bath, the siding is also used as a house track; the train dispatcher need not be notified when cars are left on any of these sidings.

X35 C. T. C. Operation on second subdivision is controlled by train dispatcher at Montevideo.
Special Instructions G23 in conjunction with the rules of the Consolidated Code of Operating Rules and General Instructions will govern the movement of trains or engines within this territory.

THIRD SUBDIVISION

X36 Speed Restrictions (in addition to General Speed Restrictions).

	Passenger Trains	Other Trains
Between west end of double track at Aberdeen and a point approximately 600 ft. west of Aberdeen yard office.....	20	20
Roscoe over Highway crossing just east of depot, trains other than No. 15 and 16....	20	20
Between Java and Java Junction	12	12
Mobridge when passing passenger station..	6	6
Mobridge between 2100 ft. east and 2000 ft. west of depot	20	20
Class S2 and S3 engines when running light.....		45
G6 engines when running light		25

X37 Class S2 and S3 engines must not be operated on the following tracks:

Aberdeen	(See Special Instructions X27).
Roscoe	Roundhouse tracks.
Bowdle	Mill track.
Bowdle Gravel Pit	Wye tracks.
Java	House track.

X37(A) Extra trains may be run between Aberdeen and Mobridge without train orders when the provisions of Rules 261, 263 and 264 are in effect.

X38 At Roscoe, an auxiliary siding 80 cars capacity is located north of main track. Rule 5 applies to the siding south of the main track and west of depot.

X38(A) (a) Between Aberdeen and east end of Mobridge Yard the signals and interlocked switches are controlled by the train dispatcher at Aberdeen. The Westward Stop signal at east end of Mobridge Yard is controlled by the dispatcher at Mobridge.

(b) Trains or engines must not enter this territory without proper signal indication or permission of the dispatcher.

(c) In case of failure of Stop signal authority for a train or engine to proceed will be issued orally by the dispatcher.

(d) When the governing signal displays a Stop indication and the dispatcher knows that the interlocked switches are in proper position and there are no opposing or conflicting train or engine movements involved, he will authorize the train or engine to proceed in the following form: "You may proceed at restricted speed to the next signal."

If the dispatcher does not positively know that there are no opposing or conflicting train or engine movements involved or that the interlocked switches are in proper position, he will issue authority to proceed in the following form: "You may proceed under protection of a flagman to the next signal that displays a Proceed indication."

These instructions must be repeated by the Conductor or Engineer to insure correct understanding. See Rule 663(A).

(e) When the governing signal displays a Stop indication for an approaching train or engine and the means of communication have failed, the train or engine may proceed at restricted speed when preceded by a flagman to the next signal that displays a Proceed indication, or to the next point of communication. Flagman must be sent far enough in advance to insure full protection.

(f) Trains or engines must not move in the opposite direction to that authorized by the governing signal without proper authority from the dispatcher unless preceded by a flagman sent far enough in advance to insure full protection.

(g) Trains or engines must not enter or foul main track or re-enter main track after having cleared it unless the governing signal displays a proceed indication or unless authority is obtained from the dispatcher.

Where main track switches are not interlocked or governed by signal indications, trains or engines must report to the dispatcher when clear of the main track and switches properly lined and locked.

(h) Trains or engines must not pass beyond the limits of this territory without proper authority including the information required by Rule S-83 or D-83.

FOURTH SUBDIVISION

X39 At Shakopee, crews switching Rahr Malting Plant will not move engines over pit on barley track nor over scale on malt track due to reduced clearances.

X40 At Shakopee, the normal position of the electrically locked crossing gates is against movements on the CMStP&P.

At Chaska, the normal position of the electrically locked crossing gates is against movements on the CMStP&P.

At Lakeville, the normal position of the electrically locked crossing gates is against movements on the CMStP&P.

X41 At Prior Lake, Shakopee and Chaska, the siding is also used as a house track; the train dispatcher need not be notified when cars are left on any of these sidings.

X42 At Prior Lake all trains will stop before passing over crossing 100 ft. west of depot.

X42(A) Cars left on No. 1 track at Cologne must not be left closer than 250 feet east of Adams Street crossing. Cars left on tracks south of No. 1 track must not be left closer than 65 feet from the east edge of the Adams Street crossing.

FIFTH SUBDIVISION

X43 At Biscay, the siding is also used as a house track; the train dispatcher need not be notified when cars are left on this siding.
