Nos. 5, 15, and 101 must not exceed maximum speed of 100 miles per hour. Maximum speed for Class A oil burning engines on Hiawatha trains 100 miles per hour. Other passenger trains must not exceed maximum speed of 90 miles per hour. Maximum speed for F-5 and F-6 engines is 75 miles per hour, S-2 and S-3 engines 70 miles per hour.

No. 5 register at Portage by Register Ticket.

Automatic Cab Signal system is in use between Portage and Brookfield.

Double track is in use between Milwaukee and Portage via Wauwatosa.  
Single track is in use between Elm Grove and Air Line Yard via West Allis.

Automatic Block System is in use between Milwaukee and Portage and between Elm Grove and 600 feet west of west switch Soldiers' Home Yard, Milwaukee via West Allis. The east limit of the automatic block system at Milwaukee is at Sixth Street Viaduct approximately 1300 feet west of the passenger station.

Rules 251, 253 and 254 are in effect on eastward and westward tracks between Grand Avenue and Milwaukee for movements with the current of traffic.

Brookfield is a register station for No's. 307, 363, 393, 308, 368 and 394 only.

Watertown is a register station only for trains starting or terminating at that station and such trains may register by register ticket when not displaying signals for a following section.

Freight trains must not exceed maximum speed of 60 miles per hour except between Elm Grove and Greenfield Jct. where trains must not exceed maximum speed of 25 miles per hour.

Automatic Block Signal System is in use between a point 600 feet west of the west switch at Soldiers Home Yard, Milwaukee, and Elm Grove.

When the eastward signal at West Allis depot displays a Stop indication, in addition to complying with Automatic Block Signal rules, a trainman or the engineer must immediately communicate with the Yardmaster at Air Line Yard, Milwaukee, and receive instructions from him before proceeding.

## TELEPHONES FOR EMERGENCY USE WHERE OPERATORS NOT ON DUTY ARE LOCATED AS FOLLOWS:

DISPATCHER TELEPHONES:	Hartland .....	In booth on first pole west of scale house.
	East Rio .....	In pump house.
	Wisconsin Dells .....	In freight office.
	Tomah .....	In scale house.
	Tunnel City .....	At Interlocked Switch.
	Raymore .....	At Interlocked Switch.
	Camp McCoy .....	In booth at crossover.
	West Camp McCoy .....	In booth on pole at crossover switch.
	Madison, Baldwin Street .....	In booth on telegraph pole at crossover between Watertown & Portage Lines.
	North Madison .....	In booth on pole at area switch.
	Windsor .....	In depot.
	Manley .....	In booth on pole near switch.
OTHER TELEPHONES:	West Allis .....	In hallway of depot.
	Wauwatosa .....	On pole east end depot Mid-city switch, Manigold Crossing at Badger Paint Co. in box on pole connected with Brookfield and Grand Avenue. On pole east end house track.
	Kenyon .....	At County Building switch, west of Wauwatosa, connected with Brookfield and Grand Avenue Tower.
	Brookfield .....	In booth on pole west end westward siding connected with Grand Avenue-Oconomowoc block.
	Brookfield .....	Inside baggage room, connected with Grand Avenue and Oconomowoc.
	Brookfield .....	At the switch east of depot.
	Elm Grove .....	Air line Switch in booth, connected with Brookfield & Grand Avenue Tower.
	Pewaukee .....	At crossover 700 feet east of Oakton Ave. crossing connected with Brookfield, Duplainville and Oconomowoc.
	Hartland .....	In baggage room and at west crossover connected with Brookfield, Duplainville and Oconomowoc.
	Nashotah .....	On pole north of tracks opposite depot.
	Okauchee .....	In east waiting room depot connected with Brookfield, Duplainville and Oconomowoc.
	Ixonia .....	In depot waiting room, connected with Oconomowoc and Watertown.
	Watertown, Third St. ....	In booth outside flagman's shanty, connected with Oconomowoc & Watertown
	Watertown, Washington St. ....	In booth on pole across from section shanty, connected with Oconomowoc and Watertown.
	Watertown, Milford St. ....	In booth in flagman's shanty, connected with Watertown and Oconomowoc.
	Watertown, Humboldt St. ....	On telegraph pole connected with Watertown, Ixonia and Oconomowoc.
	Watertown .....	In booth on post at Bull Moose crossing west of Watertown.
	Columbus Sid. W. of Watertown	At remote control shanty at switch, connected with Watertown and Portage.

OTHER  
TELEPHONES:

Voltz .....	In booth on pole at east siding switch.
Voltz .....	In shanty at west switch, connected with Watertown and Portage.
Richwood Depot .....	Connected with Watertown and Portage.
Reeseville .....	In booth on post between crossover switches.
Reeseville .....	Freight house in booth, connected with Watertown and Portage.
Columbus .....	In baggage room.
Columbus .....	East end of eastward siding connected with operators at Portage & Watertown
Fall River .....	West end of depot.
East Rio .....	In pump house connected with Portage and Watertown.
East Rio .....	In booth on pole east end of eastward siding connected with Portage-Oconomowoc block.
Rio .....	In baggage room connected with Portage-Watertown and Oconomowoc.
Portage Jct. East Home Signal ..	Connected with Portage operator on yard phone line.
Portage Jct. West Home Signal ..	Connected with Portage operator on yard phone line.
Portage .....	In shanty west of Hamilton St. (Mulcachys Crossing) connected with yard block.
Portage .....	York Mills, shanty, connected with Portage operator on yard phone line.
Portage .....	East end of passenger platform in shanty, connected with Portage operator on yard phone line.
Portage .....	West end switch, in shanty, connected with Portage operator on yard phone line.
Portage .....	West Yard, in shanty, connected with operator Portage on yard phone line.
Portage .....	In booth on pole 1¼ miles west Portage depot.
Portage .....	In engineer's shanty just south of coal shed connected with Portage operator on yard phone line.
Portage .....	In booth at eastbound home Signal 92-2 at west end of yard connected with operator at Portage.
Lewiston .....	In booth on pole, connected with Portage and New Lisbon.
Cheney .....	On pole opposite station sign connected with Portage and New Lisbon.
Wisconsin Dells .....	In booth at west end of freight depot.
Round Bluff .....	Near crossing in box on pole.
Mauston .....	In baggage room.
New Lisbon .....	In booth on pole opposite No. 1 track switch, connected with New Lisbon, Camp Douglas and Portage.
	In booth on pole at head room track switch.
Tomah .....	In men's waiting room connected with Camp Douglas-La Crosse Block.
Tunnel .....	In booth at overhead bridge west of the tunnel, Camp Douglas-La Crosse Block.
Camp McCoy .....	In booth at crossover, connected with Camp Douglas-La Crosse Block.
West Camp McCoy .....	In booth on pole at crossover switch, connected with Camp Douglas-La Crosse Block.
Sparta .....	In booth on pole at crossover and at eastward home signal about two miles west of Sparta, connected with Sparta.
Rockland .....	In office connected with Sparta and Bangor.
Bangor .....	In freight room connected with Grand Crossing and Sparta.
West Salem .....	In baggage room, at depot.
3 miles East of Medary .....	In booth on pole.
Burke .....	In shanty.
Swift & Co. ....	75 feet west of Main Line switch.
North Madison .....	In depot.

# SPECIAL INSTRUCTIONS

17

## ALL SUBDIVISIONS

**G-1** Engineers operating engines equipped with the oscillating emergency red headlight will be governed by the following:

When the air brakes are applied from any cause other than in normal operation by the engineer, or when it is found necessary to stop train due to some defect, or under circumstances which might cause a derailment and the fouling of adjacent main track, engineer must immediately display the oscillating red headlight.

Engineers on approaching trains will take notice and immediately bring train to a stop, and will not proceed until track is found to be safe and clear for their movement.

These instructions are applicable at all times, both day and night. The emergency headlight should not be used for any other purpose.

The operation and use of this device does not in any way relieve trainmen and enginemen from full compliance with Rules 99 and 102.

**Emergency Red Rear End Lights.** Trainmen on trains equipped with oscillating emergency rear end lights must familiarize themselves with the location of the switches which control the lights and will be governed by the following:

The emergency red rear end lights will be used on trains so equipped in the following manner:

To provide protection to trains on adjacent tracks as required by Rule 102.

To provide supplemental protection under Rule 99 in all circumstances where its use is necessary to stop following trains on one or more tracks.

A following train observing this emergency red light displayed must immediately reduce to restricted speed and be governed by instructions of flagman.

The use of this emergency red light does not in any way relieve the flagman from full compliance with Rules 99 and 102.

Portable emergency red lights must be removed before coupling onto the car.

**G-2** The Mars white light on engines so equipped shall be used at all times between the hours of sunset and sunrise, and during daylight hours on days that are dark, or during sleet, snow, fog or rain, such as would impair the vision of motorists and hinder them from observing approaching trains, except the light must be turned out when moving through certain portions of large terminals and yards where yard engines are employed, approaching junctions, or meeting points, or while standing at those points, and when approaching trains in the opposite direction on double or three or more tracks.

In case of failure of the regular headlight, the Mars white light should be used in stationary position as the headlight.

**G-3** Where Approach signals are used in connection with facing point switches or manual block signals, the switch or block signal will be considered as the Home signal.

**G-4** Employees are prohibited from:

Removing any of the appliances of engines or cars that will endanger the safety of themselves or others.

Standing on top of high cars while passing under bridges or through tunnels.

Getting on the end of an engine or of a car as it approaches them.

Going between or running ahead of moving cars to couple, uncouple, open, close, or arrange knuckles of couplers.

Working on the side of cars or trains where there are buildings, sheds, cattle chutes, or other projections.

Kicking or holding draw bar in position to make a coupling with an approaching car or engine.

Following other dangerous practices.

**G-5** When, for any reason, adjustment is necessary to a draw bar, knuckle pin, or locking block prior to making coupling or when coupling does not make, the engine or cars must be separated not less than 20 feet and action taken to prevent the cars from moving before going between the cars to make the adjustments.

**G-6** Whenever a car without a drawbar or draft timber is to be moved by a train or engine and it is necessary to chain the car to other cars or engines, employees are prohibited from going between such car and other cars or engines until the persons performing the work have a thorough understanding with the engineer and other members of the train crew. During the process of chaining up the car, the car itself must be properly secured while being chained to other cars, and if the car is to be chained to the engine, then the car must be secured and the brakes on the engine set to avoid a movement of any kind. The engineer must not release the brakes until he has received verbal information that all employees are out from between the cars or engines, and under no circumstances must employees again go between such car or cars and engines until the engineer and other members of the train crew have been notified and the car properly secured and the engine brake set.

**G-7** Employees must not handle or board cars or engines that bear BAD ORDER cards without first ascertaining the nature of the defect so that they may guard against injury.

**G-8** When using hand holds and ladder or stirrup steps to descend from engines, cars or other equipment, employees must face the equipment and be sure of a secure handhold and footing.

**G-9** Employees must not step on track rails nor other similar objects when it can be avoided.

**G-10** When run-ways, gang-planks or skids are used in handling freight to or from cars, they must be secured to prevent slipping.

**G-11** Lighting enginemen's torches by holding them in the fire box is hazardous and must not be permitted.

**G-12** Employees are prohibited from riding:

"On engine footboards or pilot steps between engine and car when cars are being pushed.

"On leading footboard or pilot steps while coupling engine to cars.

"On deadwoods, drawbars, brake beams, journal boxes and brake wheels.

"On ends of cars containing lading which may shift.

"On engine pilot or footboards, sides or ends of cars, while going in or out of depressed tracks.

"On forward footboard or pilot steps of engine in direction the engine is moving except in cases where operating conditions make it necessary for safety and then only one employee must ride on the footboard.

"In the gangway of engine."

G-13 When necessary to go outside when locomotive is either standing or moving, extreme caution must be exercised to avoid slipping or falling from cab ledge (catwalk) or running board. Cab ledge (catwalk) is not to be used on standing locomotives when access to the running board can be had by other means.

G-14 The use of gasoline stoves in Railroad Company's equipment or buildings is prohibited; the use of oil stoves other than modern kerosene stoves (preferably those bearing the Underwriter's label) is also prohibited.

This does not apply to U. S. Army Field Ranges when installed under the supervision of a U. S. Army commissioned officer and operated by his men.

G-15 The provisions of Rule 815 also apply to transfer movements within yards.

G-16 All 44-ton Diesel Engines dead in freight trains must be handled at rear of train just ahead of the caboose and when a pusher engine is placed on the rear of the train, the 44-ton Diesel Engine must be placed behind the pusher. When there is a 44-ton dead Diesel Engine in the rear of the train, the train must not be pushed nor pulled from the rear, and the dead Diesel Engine must not be handled in switching movements in conjunction with other cars.

The following equipment must not be towed or operated under its own power through water in excess of the maximum height of water above rail shown below. When towed or operated under own power through water of lesser depth than that shown below, a speed of three miles per hour must not be exceeded.

"Diesel power units 600 and 1000 H. P. Switchers, 4½ inches, all other Diesel Engines and Gas-Electric Motor cars, 3 inches."

When operating through water under own power, controller should be in Series position.

G-17 The following cars, loaded or empty, will be handled next ahead of the caboose giving preference in the order shown, except that at least one car must be handled between a flat car loaded with rails and the caboose:

Bad order cars.

Wood underframe flat cars.

Switch rear "S.R." cars.

G-18 Unoccupied outfit cars of steel underframe or steel center sill construction when inspected and passed by a Car Department inspector, may be hauled in any part of the train.

G-19 For the comfort of the passengers, the air-conditioning on our air-conditioned passenger trains should be kept operating as long as possible. When approaching stations where cars are to be picked up or set out between the engine and the rear car, the steam line must be blown out at the proper place and the steam shut off before the train cars are to be set out between the engine and the rear car, the fireman will simply shut off the steam as soon as the train stops in the station.

G-20 In case of heavy rain or violent windstorm, the operator must notify the section foreman.

G-21 A yellow flag by day stencilled **ELECTRIC CHARGE LINE** and in addition, a yellow light by night, placed at one or both ends of a passenger car standing on a yard track, indicates that the battery of the car is connected to a charge line. When thus protected, it must not be coupled to or be moved before the charge line has been removed. Other equipment must not be placed on the same track so as to intercept the view of the yellow signals without first notifying the workmen; in the absence of the workmen, the signals may be moved to the end of the equipment so placed to afford the necessary protection.

## DEFINITIONS

G-22 Centralized Traffic Control.—A block or a series of consecutive blocks, the signals of which, together with certain switches, are controlled from a central location.

Remote Control Interlocking.—A system of operating outlying signal appliances from a designated point.

C.T.C.—Abbreviation for Centralized Traffic Control.

## CENTRALIZED TRAFFIC CONTROL

G-23 (a) On portions of the railroad so specified in the timetable, trains will be governed by block signals whose indications will supersede the superiority of trains for both opposing and following movement on the same track.

(b) Except as affected by Special Instructions G-23 (a), all block signal rules and operating rules remain in force.

(c) The movement of trains and engines will be supervised by the Train Dispatcher, who may also control the CTC. When the CTC is controlled by other than the Dispatcher, the Dispatcher will issue the necessary instructions to the operator at the control station, location of control station will be designated by special instructions.

(d) Trains or engines must not enter CTC territory unless the governing signal displays a Proceed indication or unless authority is obtained from the authorized employe at the control station.

(e) In case of failure of a Stop signal, authority to proceed will be issued orally by the authorized employe at the control station.

(f) Trains or engines must not move beyond the limits of CTC territory without the proper authority including the information required by Rules S-83 and D-83.

(g) When the governing signal displays a Stop indication and the operator knows that the interlocked switches are in proper position and there are no opposing or conflicting train or engine movements involved, he will authorize the train or engine to proceed in the following form:

"You may proceed at restricted speed to the next signal."

If the operator does not positively know that there are no opposing or conflicting train or engine movements involved or that the interlocked switches are in proper position, he will issue authority to proceed in the following form:

"You may proceed under protection of a flagman to the first signal that displays a Proceed indication."

These instructions must be repeated by the conductor or engineer to insure correct understanding.

See Rule 663(A).

(h) When the governing signal displays a Stop indication for an approaching train or engine and the means of communication have failed, the train or engine may proceed at restricted speed, when preceded by a flagman, to the next signal that displays a Proceed indication, or to the next point of communication. Flagman must be sent far enough in advance to insure full protection.

(i) Where main track switches are not interlocked or equipped with electric locks, when a train or engine enters a siding or other track or makes a crossover movement, the operator in charge must be notified

when the movement is complete and the main track switches have been closed and locked. The switches must not be opened nor will the train or engine enter upon or foul the main track without first receiving authority from the operator.

- (j) A train or engine must not move in the opposite direction to that authorized by the governing signal without proper authority from the operator, unless preceded by a flagman sent far enough in advance to insure protection.
- (k) Instructions for the operation of the electric locks on hand operated switches are posted in telephone booths or on the inside of the door of the locks.
- (l) Dual Control switches are located at Interlocking in CTC territory. See Rules 663 (A), 663 (B) and 663 (C).

### GENERAL SPEED RESTRICTIONS

G-24 When freight cars (except cars that are equipped for passenger train service) are hauled in a passenger train, the maximum speed of that train will be that prescribed for freight trains in that territory unless a different speed is authorized by bulletin or train order.

G-25 Diesel or Electric engines with unobstructed view in either direction may be operated at permissible speeds in either direction.

Diesel or electric engines with restricted view in one direction must, when operated in that direction, reduce speed to the extent necessary for safe operation.

Dead engines must not be hauled in trains without instructions from the chief dispatcher and must be accompanied by a competent rider, except a rider is not required for Gas-Electric or Diesel Engines.

Diesel engines moving dead in train will come under the provisions of Rule 806 and when the doors of the locomotive are locked and the hand brake is not accessible, a freight car with operative hand brakes must be coupled to the diesel with uncoupling mechanism made inoperative.

A rider is not required for dead engines handled by yard crews in terminals, except where condition of dead engine or other circumstances may require for safe movement.

Engines with side rods removed from one side only, must not be hauled in trains.

Dead engines equipped with wood underframe tenders, when hauled in trains, should be placed in the rear of the train just ahead of any Switch Rear cars.

G-26 Gas-Electric Motor cars should not be hauled dead in trains unless disabled. When necessary to haul such cars dead in freight trains, they should be hauled on the rear of short freight trains.

G-27 Dead engines must not be hauled backward in train if it can be prevented and then only at slow speed.

Conductors will notify engineers when one or more dead engines are to be hauled in trains and the conditions under which they are being handled, so that the speed may be regulated accordingly.

G-28 When dead engines with side rods disconnected are hauled in trains there must be at least 8 cars between engines so hauled.

G-29 Dead engines of Class K type or larger when hauled in trains should be placed approximately 10 cars from the road engine.

G-30 Unless otherwise restricted, the following equipment must not be moved in excess of the maximum speeds shown below and further reduction must be made where conditions require:

### Type of equipment

Trains handling loaded air dump cars (must stop when meeting trains on double track) .....	25
Work trains with workmen or occupied outfit cars .....	25
Lidgerwood unloaders .....	15
Scale test cars, on Branch Lines 20, on Main Line .....	25
Class I engines .....	25
Passenger trains handled or helped by freight engines with single trucks .....	60
F-5 and F-6 engines (on divisions or portions of divisions where authorized to be used) .....	75
K-1 engines on passenger trains (but must not be used except in extreme emergency) .....	45
L-2 and L-3 Engines (on divisions or portions of divisions where authorized to be used) .....	50
S-2 and S-3 engines (on divisions or portions of divisions where authorized to be used) .....	70
Dead engines with side rods disconnected .....	15
Dead engines with side rods in position .....	25
Dead engines with all rods connected, pistons removed and valve motion disconnected .....	45
Engines with side rods off and main rods connected when working steam, running light or in train .....	15
Engines (other than Mallet type) with side rods in position and one main rod removed, light or hauling cars .....	25
Mallet type engines working steam with one main rod removed .....	20
Diesel switchers, either dead in train or operating under their own power (except 600 H.P. Alco switchers 1600 to 1603 inclusive) .....	45
600 H.P. Alco switchers, series 1600 to 1603 inclusive ..	40
All 44-ton Diesel engines	
When moved dead in train .....	25
When under own power .....	30

G-31 Unless otherwise specified, the speed of all trains or engines approaching interlocked railroad crossings must be reduced, and passenger trains must not exceed 45 miles per hour and other trains or engines 25 miles per hour when passing over such crossings. The stated speed must be further reduced where conditions require. This does not apply to railroad crossings protected by automatic signals or gates; trains and engines will approach such crossings at a restricted speed and if proper proceed indication is received, may pass over the crossing at the speed prescribed by Special instructions or bulletin.

The speed of all trains must not exceed 20 miles per hour while passing over railroad crossings protected by signals or gates unless otherwise specified.

G-32 The speed of trains handled by Gas-Electric or other similar type power, when consisting of power unit only, must not exceed 10 miles per hour when approaching and passing over railroad crossings protected by automatic signals.

G-33 That enginemen may have knowledge of the maximum permissible speed around curves and at points where normal authorized speed must be restricted, a yellow sign with the black letters **R.S.** and black figures and placed at an upward angle of 45° on the right hand side of the track, indicates that the permissible speed beginning 3000 ft. distant corresponds in miles per hour, to the figures shown. A yellow sign with the black letters **R.S.** and placed in a vertical position on the right hand side of the track, indicates that normal speed may be resumed.

These signs do not apply to trains which by time-table or other instructions, are restricted to a slower speed.

Where these signs have two sets of figures the outside figures apply to the movement of freight trains and those nearest the track apply to passenger trains.

**G-34 Spring switches:**

Movement in facing point direction over a spring switch equipped with facing point lock may be made at normal speed. Movement in facing point direction over a spring switch not equipped with facing point lock must not exceed 25 miles per hour. If switch is lined for turnout, the allowable turnout speed must be observed.

Movement in trailing point direction over a spring switch on track for which the switch is lined may be made at normal speed.

Movement in trailing point direction which springs the switch points must not exceed 40 miles per hour.

If movement is through turnout the allowable turnout speed must be observed.

See Rules 520 to 525 inclusive.

**G-34 (A)** Spring switch must not be thrown by hand when wheels are standing on any part of the switch points, nor before the points have completed their full movement after being trailed through.

**G-35** In addition to Consolidated Code Rule 801 about handling of occupied outfit cars, the following will also apply on this Railroad:

When occupied outfit cars are set on a siding, the switches at each end should be spiked to prevent any possibility of a train striking the cars.

The same principle will also apply when such cars are placed on other side tracks; but when for operating reasons, it is not practicable to have the switches spiked, the train dispatcher must be notified.

When occupied outfit cars are standing on other than siding and the switches on each end are not spiked, a yellow signal must be displayed on each end of the outfit cars. Under such conditions, the cars must not be moved except when necessary and then only after the man in charge has given his permission. When other cars are placed on the same track, the yellow signal must be moved to the end of the string of cars on that track where it can be plainly seen.

**G-36** When a train order office is closed during the period authorized by timetable or bulletin, the light in the train order signal will be extinguished.

**G-37** Excessive use of sand at any point is prohibited and its use must be restricted to actual necessity.

**G-38** When passenger trains are unusually delayed passengers should be informed as to cause and extent of delay.

Conductors will make suitable announcements to passengers on trains, or arrange for brakemen and sleeping or parlor car employees to do so.

Agents or station masters will see that such announcements are made to passengers in stations when waiting for delayed trains.

Public Address System should be utilized both at stations and on trains when available.

**G-39** In complying with Rule 3, of the Consolidated Code of Operating Rules and General Instructions, the prescribed form for yardmasters and foremen of yard engines to register the time when watches are compared will be the place provided on back of time slip Form 3256.

**G-40** When two or more Diesel engine units are coupled together, the numerals and suffix letter of the leading unit will be illuminated at all times when in service. The numerals and suffix letter of trailing units must not be illuminated. The number and suffix letter of the leading unit only to be used in train orders.

**X-1** Trains handling steam derricks must not exceed the following speed limitations. The indicated maximum speeds should be further reduced on tangents and on curves where track is not in proper condition for the specified maximum speeds.

Between	On Tangent Track	On Curves
Milwaukee and Grand Ave. ....	28 MPH	20 MPH
Grand Ave. and La Crosse ....	40 MPH	25 MPH
Watertown and Mile Post 164 on Third Sub-Division ....	35 MPH	20 MPH
Mile Post 164 and Madison on Third Sub-Division ....	15 MPH	10 MPH
Portage and Madison ....	15 MPH	10 MPH
Sparta and Viroqua ....	15 MPH	10 MPH
Westby Jct. and Chaseburg ....	10 MPH	5 MPH

Trains handling steam derrick X-17 which is the new 200-ton crane located at Milwaukee, must not exceed 15 miles per hour passing over Arnold Avenue subway between the Air Line and West Allis. 15 MPH over Bridge C-94½ located 0.7 mile west of Watertown. Must not be handled over Bridge C-94½ on eastward passing track Watertown. 15 MPH over Bridge C-182½ located 0.4 mile east of MP 165 between Rio and Wyocena. 15 MPH over Bridge C-202 located 0.4 mile east of MP 174 between Wyocena and Portage.

**X-2** Trains handling rotary snow plows, locomotive cranes, Jordan Spreaders, shovels, pile drivers and ditching machines must not exceed speed limitations shown below. The indicated maximum speeds must be further reduced on tangents and curves where track conditions do not justify the specified maximum speeds. Engine and train crews will make frequent observations of how these machines are riding and when in damaged or questionable condition, or when this equipment is hauled in trains with the heavy end trailing, the speed must be further reduced to insure safe movement.

	On Tangent Track	On Curves
Milwaukee and La Crosse ....	35 MPH	25 MPH
Watertown and Mile Post 164 on Third Sub-Division ....	20 MPH	15 MPH
Mile Post 164 and Madison on Third Sub-Division ....	15 MPH	10 MPH
Portage and Madison ....	15 MPH	10 MPH
Sparta and Viroqua ....	15 MPH	10 MPH
Westby Jct. and Chaseburg ....	10 MPH	5 MPH

**X-3** The speed of all trains or engines passing through turnouts must not exceed 13 miles per hour except those turnouts laid with long frogs and designated by Special Rule or bulletin where the speed may be increased to 25 miles per hour, unless otherwise authorized.

Location of turnouts laid with long frogs:

Station	Location
Wauwatosa	Crossover opposite the depot.
Elm Grove	Air Line connection.
Elm Grove	Crossover west of the depot.
Brookfield	Long crossover east of depot.
Brookfield	West turnout of westward siding.
Brookfield	Crossover west of the depot.
Duplainville	Crossover at the interlocking.
Pewaukee	Crossover near the old freight house.
Hartland	Crossover east of the depot.
Oconomowoc	Crossover near the freight house.
Ixonia	Crossover east of the depot.
Watertown	Crossover east of river.
Watertown	Crossover east of depot.
Watertown	East turnout of eastward siding.
Voltz	West turnout of westward siding.
Lyndon	Crossover west of depot.
Mauston	Crossover east of depot.
New Lisbon	West end of westward siding.
Tunnel City	End of double track.
Raymore	End of double track.
Camp McCoy	Crossover west of depot.
W. Camp McCoy	Crossover east of depot.
Sparta	West turnout of westward siding.

Sparta Remote controlled crossover from eastward main track to Fifth Subdivision.  
 Medary Crossover opposite tower.  
 Grand Crossing Crossover opposite tower.

- X- 3 (A) All spring switches are equipped with facing point locks, permitting maximum permissible speed in the territory involved while moving against the points. The speed must not exceed 25 M.P.H. while moving against the points at the following spring switches: (See special instruction G-34.)

L. & R. First District ..... None

**X- 4 Interlocked railroad crossings.**

Location	Hiawatha Trains	Other Passenger Trains	Freight Trains
Grand Avenue .....	35 m.p.h.	35 m.p.h.	25 m.p.h.
Duplainville .....	80 m.p.h.	70 m.p.h.	50 m.p.h.
Watertown, Eastward track .....	35 m.p.h.	35 m.p.h.	25 m.p.h.
Watertown, Westward track .....	50 m.p.h.	50 m.p.h.	50 m.p.h.
Portage Jct .....	50 m.p.h.	50 m.p.h.	25 m.p.h.
Camp Douglas .....	70 m.p.h.	70 m.p.h.	45 m.p.h.
Medary .....	70 m.p.h.	70 m.p.h.	45 m.p.h.
Grand Crossing .....	50 m.p.h.	50 m.p.h.	25 m.p.h.

- X- 5 Five minute fusees should be used in Automatic Block System territory and 10 minute fusees should be used in other territories.

**FIRST AND SECOND SUBDIVISIONS**

- X- 6 Speed restrictions (in addition to general speed restrictions).

At Milwaukee, trains and engines must not exceed 12 miles per hour between the passenger depot and North Plankinton Avenue.

Eastward trains or engines, including transfers, about to enter the freight yard at Milwaukee through Cut Off may apply the provisions of Rule 516 to signal 2-0 located just west of the connection into the freight yards.

Between Milwaukee and Grand Ave., trains will not exceed 35 miles per hour over crossing at 13th Street, and 20 miles per hour on curve at 8th Street.

At Wauwatosa, trains must not exceed 35 miles per hour between east city limits and Main Street.

No. 55 will not exceed a speed of 30 MPH through Pewaukee while dispatching mail.

At Portage, trains must not exceed 40 miles per hour between the switches of the yard.

At Raymore, the speed of eastward trains must not exceed 50 miles per hour. Westward trains, when moving against the current of traffic, must not exceed 25 miles per hour through the turnout.

Class S-2 and S-3 engines must not exceed 70 miles per hour when hauling a train nor 45 miles per hour when running light.

The speed of steam engines when running backward, either light or handling trains, must not exceed 25 miles per hour on First and Second Sub-Divisions.

- X6A Eastward trains or engines moving over the eastward track over Copeland Avenue at La Crosse will be governed by signal indications, and eastward trains moving over other tracks will not move over Copeland Avenue until they receive a hand signal from the operator at Copeland Avenue.

- X- 7 In Automatic Block Signal territory Manual Block System Rules will apply when trains are run against the current of traffic.

- X- 8 Within the yard limits of Milwaukee, the officials of the Milwaukee Terminal Division have jurisdiction.

- X- 8 (A) Trains or engines approaching the passenger station at Milwaukee from the west must stop at the illuminated stop sign located 300 feet west of the Sixth Street viaduct, unless proceed signal is given by the Switchtender at Fifth Street.

Trains or engines leaving passenger station at Milwaukee will not proceed unless proceed signal is given by the Switchtender at Second Street and Fifth Street.

- X- 8 (B) At Milwaukee, eastward freight trains and engines that are to enter the yard at the Cut-off will be governed by a light signal located on the overhead pass at 36th Street.

When a yellow light is displayed, eastward freight trains and engines may proceed to Cut-off to enter the yard. When no light is displayed, eastward freight trains and engines must stop west of 36th Street and remain until yellow light is displayed, or permission to proceed is received from Switchtender at the Cut-off.

Telephone for communication with Switchtender at Cut-off is located at the crossing flagman's shanty at 36th Street.

If for any reason eastward freight trains or engines are stopped west of the signal, the head man will immediately go to the telephone and ascertain from switchtender at the Cut-off when movement can be made.

- X- 9 Train orders for movements between Milwaukee and Grand Avenue will be issued over the signature of the superintendent of the L&R Division.

- X-10 When extra trains are run to Milwaukee or Cut Off, the train order must read "Via Wauwatosa" or "Via West Allis."

- X-11 Within the City Limits of Milwaukee, enginemen will not sound the whistle except when necessary to prevent injury to persons or damage to property, or when necessary to warn or signal employees or the public. The bell must be rung continuously when train or engine is moving within city limits.

At Oconomowoc, the steam whistle must not be sounded within the city limits except in case of emergency and to prevent an accident.

At Wisconsin Dells, the whistle must not be sounded between the whistle posts located on either side of the highway crossing 0.8 mile east of the depot except in case of emergency and to prevent an accident. Signal 14(1) given by trains for this crossing must end at the whistle post 80 rods from the crossing.

- X-13 At Duplainville, a light will not be displayed on train order signal until interlocking route is lined for movement of a train.

- X-14 At Brookfield, Rule 83(B) does not apply to eastward trains when operators are not on duty.

- X-15 All La Crosse and River Division eastward second and inferior class and extra trains may run ahead of No. 308.

- X-16 At Brookfield, the eastward train order signal located on the Madison Division, governing eastward movements off the Madison Division, will be controlled from Brookfield during the hours that office is open and from Grand Avenue during the hours Brookfield is closed.

When this signal indicates "Proceed" as per Rule 200-C, eastward trains off the Madison Division may run ahead of eastward first class trains Brookfield to Grand Avenue. The operators at Brookfield and Grand Avenue must not display the Proceed indication of this signal without instructions from the train dispatcher of the La Crosse and River Division.

X-17 At Watertown, the train order signal governs First Subdivision trains only and Rule 83 (B) does not apply to eastward first-class trains entering the First Subdivision from the Third Subdivision if the train order signal indicates Proceed as per Rule 200-C.

X-18 At Watertown, the lower arm or light of the westward signal governs movements from the westward to the eastward main track through the hand operated cross-over located just east of the crossing.

Eastward third subdivision trains or engines moving to the first subdivision must not exceed a speed of 15 MPH over the C&NW crossing.

The normal position of the crossing gates is against movements on the C.M.St.P.&P.R.R. To line the gates for a movement on the engine house lead, the Master gate, which is located on the west side of the crossing, must be swung over and at right angles to the C.&N.W.Ry. tracks. Trains or engines on the engine house track must come to a stop (regardless of the position of the gates) and the gates must not be swung nor the crossing occupied until any train or engine approaching on the C.&N.W.Ry. track has either passed over the crossing or has come to a stop. Trains or engines on the engine house lead must wait 3 minutes after the gates are swung before proceeding over the crossing.

At Watertown, whistle must not be sounded within city limits except in case of emergency.

X-19 At Portage Jct. a derail, pipe connected and arranged to operate in conjunction with the interlocked switch in the westward main track. In case it is necessary to make movement through the interlocking on authority of the operator and under flag protection, the derail in addition to the switch must be examined to make sure that it is in proper position before movement is made.

X-20 At Portage, the light indicating the position of the switch of the track leading to freight house is located on a bracket under eaves on track side of depot.

X-21 At Portage, eastward Automatic Block signal 92-2, located approximately 3000 feet west of the depot, has three arms; the upper arm or light is an Automatic Block signal, the two lower arms or lights are Routing signals. The middle arm or light governs movements from the eastward to the westward main track through the hand-operated crossover located approximately 500 feet east of the signal. The lower arm or light governs movements from the eastward main track to the yard through the hand-operated crossovers located approximately 500 and 750 feet east of the signal. The movements through the crossovers must be made at restricted speed.

X-22 At Portage, the train order signal applies only to first class trains operating through, in either direction, between the first and second subdivisions and Rule 83 (B) does not apply to such trains if the train order signal indicates Proceed as per Rule 200-C.

X-23 C. T. C. operation between Tunnel City and Raymore is controlled by the train dispatcher at La Crosse.

Special Instructions G-23 in conjunction with the rules of the Consolidated Code of Operating Rules and General Instructions will govern the movement of trains or engines within this territory.

X-24 Manually controlled crossing signals, to be used for switching movements, are located at:

Elm Grove	Highway "O", west of depot
Oconomowoc,	at Wood St.
	at Lapham St.
	at Concord Rd.
Columbus,	at Spring St.
	at Birdsey St.
Bangor	at Dutch Creek Road
West Salem	at Mill St.
	at Leonard St.
See Rule 103(C).	

## AUTOMATIC BLOCK AND CAB SIGNAL SYSTEM

X-25 Automatic Cab Signal indicators supplement Automatic Block Signals in governing the use of blocks, but do not supersede the superiority of trains nor dispense with the use or observance of Automatic Block, Interlocking or other signals and rules governing them, except as provided for in Section (e).

(a) A green light displayed in the Automatic Cab signal indicator indicates **Proceed**.

(b) A yellow light in the Automatic Cab signal indicator indicates **Prepare to stop at next signal**. Trains exceeding medium speed, must immediately reduce to that speed.

(c) A red light in the Automatic Cab signal indicator indicates **Prepare to stop—expecting to find a train in the block, broken rail, obstruction or switch not properly set**.

(The above indications do not apply when moving in non-automatic cab signal territory or against the current of traffic.)

(d) When the Automatic Cab signal indicator changes to a more restrictive indication, the engineer must immediately control the train in accordance with the cab signal indication.

(e) When the Automatic Cab signal indicator changes to a less restrictive indication, the train may proceed in accordance with the new indication after the train has moved its own length beyond the point where the indication changed.

(f) Should cab signal and fixed signal conflict, the more restrictive indication will govern.

The cab signal may be cut out under the following conditions: After passing through not less than two consecutive blocks where there is a conflict between the cab signal and fixed signal indications, the cab signal may be cut out and the train may proceed in accordance with the indications of the fixed signals, but at not to exceed 40 miles per hour, to the first available point of communication, where report must be made to the train dispatcher. Train will then be governed by the indications of the fixed signals, but at not to exceed 79 miles per hour, unless a lower speed is provided by time table or other instructions, keeping clear of occupied block. After waiting one minute at stop and proceed or grade signal in stop position it may be regarded that there has been a failure of way-side signal and train may proceed at restricted speed until a more favorable signal indication is encountered.

(g) The opening of switches and derails operate to cause Automatic Cab signals of approaching trains to display restrictive indication. Trainmen and others must guard against any unnecessary restrictive speed indication.

(h) When operating in Cab Signal territory with Cab Signal cut out, the fireman must be so advised and such additional precautions must be taken as conditions may require.

(i) An engineman taking charge of an engine in Automatic Cab Signal territory must check with engineman relieved as to whether the Cab Signal is in service and functioning properly.

(j) Cab Signals must be cut out in the trailing cab of diesel engines, on engines running backward, or on other than the leading engine when more than one engine on train.

X-26 Track Restrictions as to various classes of power.

Tomah engines must not use track known as Old Valley Passing Track.

C-2 or larger engines must not be used on the following tracks:

WAUWATOSA  
WATERTOWN

Bliffert cement track.  
Brick track.  
Perfection Table Slide.  
Watertown Grocery Co.  
East Side industrial tracks and West Side industrial tracks.

L-2 or larger engines must not be used on the following tracks:

WATERTOWN	Malt House. Cities Service. Van Camps. G. B. Lewis Co.
PORTAGE	Sand Pit track west of Portage.
TOMAH	Old bunk car field south of highway crossing. Old Valley siding. New Coach yard.
SPARTA	Track back of the coal shed.

L-3 or larger engines must not be used on the following tracks:

WAUWATOSA	All tracks except the siding and house track from main track to freight house.
PEWAUKEE	Savoy track.
HARTLAND	Gravel Pit track.
OCONOMOWOC	Carnation plant. Oconomowoc Lumber Co. Oconomowoc Can Co. Old Oil track. Standard Oil Co. track. Power House track.

S-2 and S-3 engines must not be used on the following tracks:

COLUMBUS	Borden Walker.
OCONOMOWOC	House track.
IXONIA	Team track.
WATERTOWN	House track. Way Freight track. Timber track. East Side No. 3 and No. 4 track. Transfer track. West Side No. 3 and No. 4 track. Rip track. North and South Coach track. Milk Products track.
REESEVILLE	Hill track.
FALL RIVER	Stock Yard track west of the stockyard.
RIO	Elevator track. Team track.
PORTAGE	All tracks except tracks north of the main tracks, engine track and old main line south of eastward track from east end to first frog west.
WISCONSIN DELLS	Oil tracks No. 2 and No. 6. Lumber track No. 5. Side track to Anderson Mfg. Co. leading from eastward siding. S-2 engines can use the stock track from the east switch to the freight house platform, but must not pass the freight house platform.
MAUSTON	Pickle track. House track. Depot track.
TOMAH	Shop tracks.

## SPARTA

Tracks No. 1, 2, 3 and 4.  
Old eastward siding east of the overhead bridge.  
Storage track next to the old eastward siding.  
S-2 engines may use the portion of the Viroqua Line extending from the switch east of the depot at Sparta to 500 feet east of the C&NW crossing on the Fifth Sub-Division.

## WEST SALEM

All tracks north of main tracks, except westward siding from first farm crossing east of crossover from westward main to west end of stockyard.  
C&NW transfer track.

## X-27 The maximum height of cars or lading through tunnel No. 1 west of Tunnel City:

16 feet 10 inches high above rail when 6 feet wide,  
16 feet 7 inches high above rail when 7 feet wide,  
16 feet 3 inches high above rail when 8 feet wide,  
15 feet 10 inches high above rail when 9 feet wide,  
15 feet 5 inches high above rail when 10 feet wide,  
14 feet 10 inches high above rail when 11 feet wide.

## X-28 Remote Control Interlocking.

Station	Location	By Whom Operated
Elm Grove	Air Line switch	Operator Grand Ave.
Watertown	West end Eastward siding	Operator Watertown
Voltz	East end Westward siding	Operator Watertown
Portage	Portage Jct., Main track crossover and connections with L&R Divn. Fourth Sub-Division L&R Divn. and Milwaukee Divn., 4th Sub-Division	Operator Portage
New Lisbon	West end of Eastward siding	Operator New Lisbon
Sparta	Crossover $2\frac{1}{4}$ miles west of Sparta depot leading from Eastward Main track Second Sub-Division and the Fifth Sub-Division	Operator Sparta

## THIRD AND FOURTH SUBDIVISIONS

### X-33 Speed restrictions (in addition to General Speed Restrictions).

The speed of steam engines when running backward, either light or handling trains, must not exceed 25 miles per hour on Third Sub-Division, and 15 miles per hour on Fourth Sub-Division.

F-6, L-2 and L-3 engines and crane X-17 are restricted to 15 miles per hour over bridge C-574 located 0.7 miles east of MP-147 between Marshall and Waterloo.

All trains will not exceed speed of 35 miles per hour while passing through the Village of Waterloo, Wis.

Within the city of Madison, the speed of all trains and engines must not exceed 15 miles per hour.

On the Fourth Sub-Division, Class F-5 engines must not exceed 35 miles per hour at any point.

Between Darwin and Windsor, trains must not exceed 25 miles per hour over Sanderson Marsh.

X-34 Within the yard limits of Madison, the officials of the Madison Division have jurisdiction.

X-35 At Madison, the whistle must not be sounded within the city limits except in case of emergency.

X-36 At the C.&N.W.Ry. crossing, located 1.6 miles east of Baldwin Street, the speed of trains or engines must not exceed 20 miles per hour. Movements over the crossing from industry tracks are governed by Dwarf signals; the main track switch must be lined up before this signal will display a Proceed-indication.

X-37 At Franklin Street, the main track between the east end of Double track and the junction with the Fourth Sub-Division is used jointly by Third and Fourth Sub-Division trains. All trains must move within these limits at restricted speed. Third Sub-Division first-class trains must be given preference.

X-38 At Madison, all trains must move at restricted speed between the west end of Double track and the passenger depot.

X-39 On the Fourth Sub-Division, the Oscar Mayer Packing Plant is located about 2 miles west of Franklin Street; an Automatic Block signal is located on each side of the C.&N.W.Ry. connection to this industry. When the signal displays a Stop-indication, approaching trains or engines must come to a Stop and will then proceed at restricted speed until the signal that governs opposing trains has been passed.

X-40 At Madison, the normal position of the crossing gates at the C.&N.W.Ry. crossing with the Madison-Portage Line 0.9 miles west of Baldwin Street, is against the trains of the C.&N.W.Ry.

Semaphore type home signals with indications in accordance with Rules 601-A and 601-C located approximately 400 feet from the crossing operate in conjunction with the gates.

Semaphore type approach signals with indications in accordance with Rule 601-B are located approximately 2500 feet from the Home signals.

Trains or engines may proceed over the crossing without stopping after sounding signal 14(b) and at a speed not to exceed 20 miles per hour provided the track is clear, crossing is unobstructed, gates are set against the C.&N.W.Ry and the Home signal displays a proceed indication.

X-41 At Madison, the normal position of the crossing gates at the I.C. crossing, located 0.4 mile west of the depot, is against movements on the I.C. Home signals on the main track and on the yard track operate in conjunction with the gates. Trains or engines on C.M.St.P.&P. tracks must approach the signals prepared to stop, but may proceed over the crossing at a speed not in excess of 15 miles per hour provided the track is clear, crossing is unobstructed, gates are set against the I.C. and the Home signal displays a Proceed-indication.

X-42 At Madison, the normal position of the spring switch at the junction of the L&R Divn. and the Madison Divn. is for the Madison Divn. First Sub-Division. When any of the signals at this point display a Stop-indication for an approaching train or engine and no conflicting movement is evident, a trainman shall proceed to the junction and after having made certain that the switches are properly lined and that the movement may be made with safety, may signal the train to proceed; under such conditions, the movement must be made at restricted speed and must be protected against conflicting movements.

Trains or engines on the L&R Divn. moving toward Madison against the current of traffic must stop at Stop-board east of the end of double track and may proceed under protection of flagman until the junction switch has been passed.

X-43 At Hubbleton, Waterloo, Marshall, Sun Prairie, Windsor, DeForest, Morrisonville and Poynette the siding is also used as a house track; the train dispatcher need not be notified when cars are left on these sidings.

X-44 Track Restrictions as to various classes of power.

Marshall	Engines are not permitted on the Lum- ber Track.
----------	---

X-45 At Truax Field, North Madison, no cars or engines should be placed on any part of the east trestle.

## FIFTH & SIXTH SUBDIVISIONS

X-50 Speed restrictions (in addition to General Speed Restrictions).

The speed of steam engines when running backward, either light or handling trains, must not exceed 15 miles per hour on Fifth and Sixth Sub-Divisions.

At the C.&N.W.Ry. crossing, located 2.5 miles west of Sparta on the Fifth Sub-Division, the speed of trains must not exceed 10 miles per hour.

On Fifth and Sixth Sub-Divisions, freight and mixed trains must not exceed 15 miles per hour when descending grades or around bad curves.

X-51 At Melvina and Chaseburg, the siding is also used as a house track; the train dispatcher need not be notified when cars are left on any of these sidings.

X-52 Rule 83-B does not apply at Westby Junction on the 5th and 6th Sub-divisions and at Chaseburg on the 6th Sub-division, when operator not on duty.
