CHICAGO, ILLINOIS

PICTURE of new top works and preparation plant of Deep Vein Coal Company's new King Station Mine. This plant is capable of preparing coal in all standard sizes—6" Lump, 6x3 Large Egg, 3x2 Small Egg, 2x1 $\frac{1}{4}$ Nut; 2", 1 $\frac{1}{4}$ " and $\frac{3}{4}$ " screenings; 1 $\frac{1}{4}$ x $\frac{3}{4}$, 1 $\frac{1}{4}$ x $\frac{1}{4}$ and $\frac{1}{4}$ x $\frac{3}{4}$.

This is the deepest shaft mine in the state of Indiana and the coal is sold under the trade name of "DEEP VEIN" Coal.

The Deep Vein Coal Company's King Station Mine is working one of the thick-

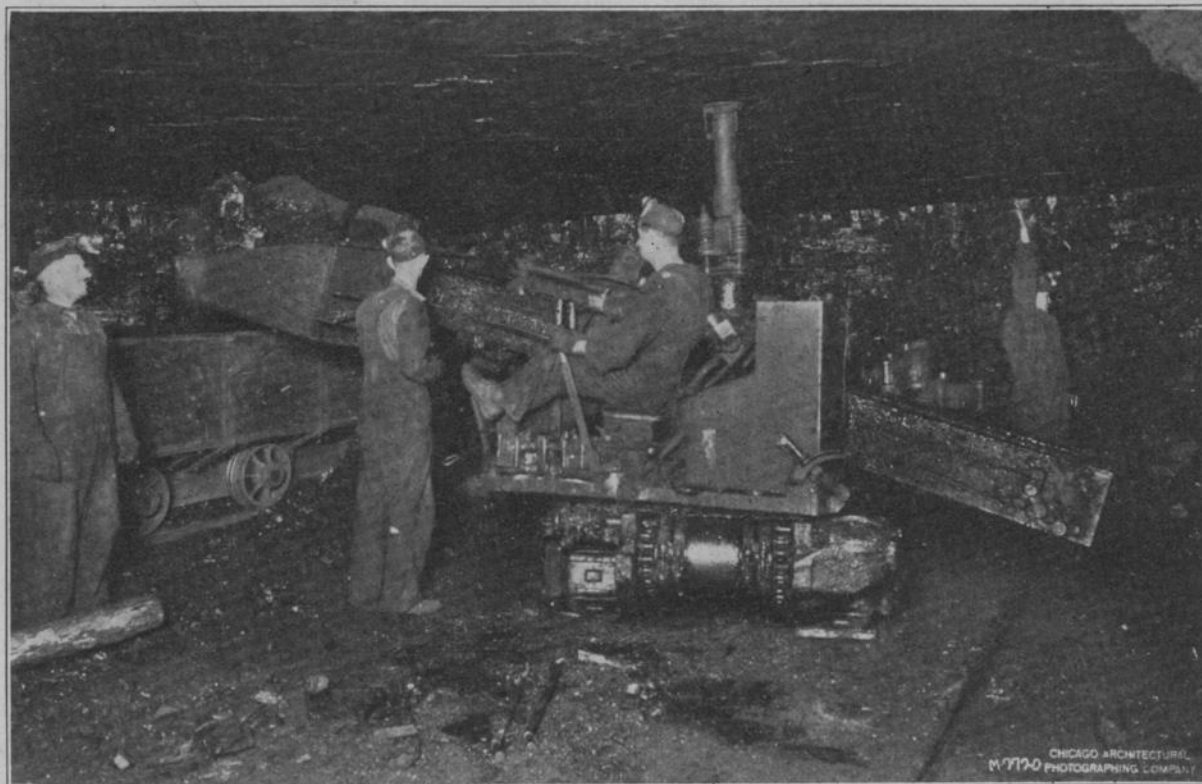

We give the best service possible at all times for the reason that we own the mines that produce the coal we sell, and believe that without honest service we cannot prosper.

Whatever your requirements may be, we invite you to
is covered with coal produced by

DEEP VEIN CO

RAILWAY EXCHANGE BLDG.,
CHICAGO, ILL.

Main Offices

est and purest seams of coal in the Middle West. It lies 500 feet below the surface, averaging in thickness around nine feet. All the coal in this mine is loaded mechanically with electric loading machines. The coal will average under 5% in ash on all prepared sizes and the screenings will average under 8% in ash and 1% in sulphur.

Deep Vein Coal is a very high grade domestic coal especially adapted for steam purposes where they have an extra heavy load.

The Deep Vein Coal Co. has been mine operators for over thirty years, producing the premium coals of Indiana.

get in touch with us. A contract with this company us, assuring complete satisfaction.

BINKLEY HIGH GRADE COALS

No matter what your local problem is on domestic coals we are confident there is a BINKLEY high-grade coal that will fill the bill, satisfy your customers completely, and make money for you. More and more each year Dealers are swinging to the BINKLEY line. And, take our word for it, there are good reasons for this steadily increasing popularity. The present time is most opportune to try a car or two. When you want a good stoker coal

—call on BINKLEY. The right coal for stokers is a matter of knowledge and selection. The coal must be adaptable to the equipment. Our staff of Combustion Engineers will gladly cooperate on your stoker installations and recommend a grade and size of BINKLEY COAL that will be GUARANTEED to give complete operating satisfaction. By all means, look over the BINKLEY line before you place your next order.

Package Car Service

A PIONEER in the establishment of through package cars, the C&EI Railway many years ago inaugurated the practice of loading less-carload traffic into straight cars to move through to some point on connecting line rails to break bulk and distribute from there—the shipments moving as would a straight carload, in through trains, to distributing points. Such cars are called “PACKAGE CARS.”

To illustrate this service—if a less-carload shipment is received by the C&EI at Chicago for Atlanta, Ga., or Little Rock, Ark., it is loaded into a car which each evening is forwarded direct to Atlanta or Little Rock; and it moves through, with other similar “L.C.L.” freight, to destination on a regular through schedule. Shipments for points near Atlanta or Little Rock are likewise loaded in such cars, thus giving through service to a “Break Bulk” point where final destination is but a few hours away in local service of C&EI connecting railroads.

The C&EI Chicago freight house loads daily through cars to 65 stations; and, similarly, other important C&EI stations load similar daily cars to advantageous break bulk points.

This method of handling L.C.L. or package freight saves days of time, minimizes danger of damage or delays in transit and is, in effect, express service at freight rates.

C&EI Package Cars From Chicago

Destination	Destination	Destination
Atlanta, Ga.	Jacksonville, Fla. (SAL)	St. Louis, Mo. (Frisco)

Icing Stations

Regular Icing Stations

Chicago, Ill.

(Initial icing—only for shipments originating on C. & E. I. rails in Chicago. Re-ice inbound shipments received for delivery or reconsignment on C. & E. I. rails in Chicago. Through carload shipments from or to connecting roads for destinations beyond Chicago that require re-icing at Chicago must be delivered via Belt Railway of Chicago for re-icing at Clearing, or via I. H. B. Railroad for re-icing at Blue Island—regular icing stations.)

East St. Louis, Ill.

(On tracks of T. R. R. A. of St. L.)

Evansville, Ind.

St. Louis (Tower Grove), Mo.

(When cars are re-iced at Tower Grove, Mo., for the convenience of the C. & E. I. Ry. Operating Department, they will be considered the same as though the service was performed at East St. Louis.)

Salem, Ill.

Emergency Icing Stations

Altamont, Ill.

Chicago, Ill.

(For traffic other than specified under regular icing station.)

Danville, Ill.

Mt. Vernon, Ill.

Terre Haute, Ind.

Villa Grove, Ill.

Vincennes, Ind.

Icing Stations Operated by the Fruit Growers Express Company along the C&EI Ry.

MAGIC BOILER PRESERVATIVE

"The Film of Protection for Boilers"

What "MAGIC" will do:

Remove scale and prevent scale formation.
Remove oil and grease.
Stop pitting and corrosion.
Increase life and efficiency of boilers and tubes.

What "MAGIC" will not do:

Will not injure metal in boilers or connecting parts.
Will not affect the packing or lubricants.
Will not cause boilers to foam.
Will not evaporate and pass over with the steam.

A. R. A. RULE 66

Was designed to correct a condition of faulty lubrication of freight cars that has been in effect for many years.

Meet its requirements!

IT MEANS ECONOMY

The beauty of scientific renovation of journal-box packing and oil is that it costs less than slip-shod home methods and insures

IMPROVED LUBRICATION

The C. & E. I. was one of the first railroads to meet Rule 66 by properly renovating its packing and oil.

DETAILED DESCRIPTIONS OF CITIES AND TOWNS IN ILLINOIS LOCATED ON THE CHICAGO & EASTERN ILLINOIS RAILWAY

ALANA (BLIND SIDING), PULASKI COUNTY, ILLINOIS

Population 5. Not incorporated. County seat, Mound City, Illinois

SURROUNDING COUNTRY: Brown and yellow silt loam. Price of improved land per acre, \$20.00; unimproved, \$10.00. Principal crops raised are oats, corn and vegetables.

ALLERTON, VERMILION COUNTY, ILLINOIS

Population 480. Not incorporated. County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois Railway.

ELECTRIC LIGHT PLANT: Municipal; Central Illinois Public Service, furnished by Keokuk, Iowa.

TELEPHONE SERVICE: Local and long distance; Illinois Community Telephone Company, Decatur, Illinois.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public high.

BANK: Allerton State Bank.

CHURCHES: 1 Presbyterian; 1 Methodist.

MUNICIPAL BUILDINGS: Post Office, rented, \$10.00 per month.

SURROUNDING COUNTRY: Level, black soil. Price of improved land per acre, \$125.00. Principal crops raised are corn, wheat, oats, beans, barley, timothy and hay.

ALONZO, IROQUOIS COUNTY, ILLINOIS

Not incorporated. County seat, Watseka, Illinois

RAILROAD: Chicago & Eastern Illinois Railway.

SURROUNDING COUNTRY: Level, black loam. Price of improved land per acre, \$140.00; unimproved, \$135.00. Principal crops raised are corn, oats, wheat and some sweet corn.

ALTAMONT, EFFINGHAM COUNTY, ILLINOIS

Population 1,225. Incorporated 1901. County seat, Effingham, Illinois

RAILROADS: Chicago & Eastern Illinois Railway; Baltimore & Ohio; Wabash Railroad.

SEWERAGE SYSTEM: 3 miles.

ELECTRIC LIGHT PLANT: Municipal.

WATER WORKS SYSTEM: Municipal.

STREETS: Paved 3 miles with cement.

TELEPHONE SERVICE: Local and long distance; National Trail Telephone Co., Altamont, Illinois.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public grammar; 1 public high; 1 parochial.

BANKS: First National Bank.

NEWSPAPER: Altamont News, weekly.

OPERA HOUSE: National Theater; capacity 300.

THEATRE: Star; capacity 200.

COMMERCIAL CLUB: Chamber of Commerce; Edgar Huffmeister, secretary.

HOTELS: Midway; American plan. Brown; American plan.

CHURCHES: 1 Methodist; 1 Presbyterian; 1 Catholic; 2 German Lutheran.

MUNICIPAL BUILDINGS: Post Office, rented, \$65.00 per month.

SURROUNDING COUNTRY: Level. Gray, silt loam. Price of improved land per acre, \$50.00; unimproved, \$15.00. Principal crops raised are corn, wheat, oats, soy beans, hay, livestock, poultry.

INDUSTRIES NEEDED: Any kind giving employment to men or women.

ALVIN, VERMILION COUNTY, ILLINOIS

Population 350. Incorporated 1890. County seat, Danville, Illinois

RAILROADS: Chicago & Eastern Illinois; Illinois Central.

ELECTRIC LIGHT PLANT: Central Illinois Public Service Company.

TELEPHONE SERVICE: Local and long distance; Rossville Telephone Co., Rossville, Illinois.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public grammar; 1 public high.

BANK: State Bank of Alvin.

CHURCHES: 1 Christian; 1 Methodist.

SURROUNDING COUNTRY: Level, mostly dark soil. Price of improved land per acre, \$100.00; unimproved, \$30.00. Principal crops raised are corn, oats, some barley, rye, wheat and soy beans.

SPECIAL INDUCEMENT: Good location for some factory.

BUSINESS AND PROFESSIONAL OPENING: Doctor.

ANCRITT (BLIND SIDING), ALEXANDER COUNTY, ILLINOIS

County seat, Cairo, Illinois

SURROUNDING COUNTRY: Mostly brown silt loam. Price of improved land per acre, \$65.00; unimproved, \$30.00. Principal crops raised are strawberries, vegetables, hay and corn.

ARTHUR, DOUGLAS COUNTY, ILLINOIS

Population 1,361. Incorporated 1889. County seat, Tuscola, Illinois

RAILROADS: Chicago & Eastern Illinois; Pennsylvania.

ELECTRIC LIGHT PLANT: Service from Mattoon, Illinois.

WATER WORKS SYSTEM: Municipal.

STREETS: Paved $2\frac{1}{2}$ miles with brick concrete.

TELEPHONE SERVICE: Local and long distance; Arthur Mutual Telephone Co., Arthur, Illinois.

FIRE DEPARTMENT: Volunteers.

PUBLIC LIBRARY: Arthur Public.

SCHOOLS: 1 public grammar; 1 public high.

BANKS: First National; Arthur State.

NEWSPAPER: Arthur Graphic Clarion, weekly.

THEATRE: Garden; capacity 200.

COMMERCIAL CLUB: Arthur Chamber of Commerce; W. P. Boyd, secretary.

HOTELS: Cottage Inn, American plan; Fleming's, American plan.

CHURCHES: 1 Christian; 1 Baptist; 1 Methodist; 1 Pentecostal.

MUNICIPAL BUILDINGS: Post Office, rented, \$65.00 per month.

SURROUNDING COUNTRY: Level, very fertile. Black loam. Price of improved land per acre, \$225.00. Principal crops raised are corn, soy beans, wheat, oats, poultry and live stock.

SPECIAL INDUCEMENTS: Sites, plenty labor, good transportation.

INDUSTRY NEEDED: Plant to handle popcorn; milk condensery, cheese factory.

BAKERVILLE (BLIND SIDING), JEFFERSON COUNTY, ILLINOIS

Population 20. County seat, Mt. Vernon, Illinois

SURROUNDING COUNTRY: Rolling; light gray loam. Price of improved land per acre, \$40.00; unimproved, \$10.00. Principal crops raised are corn, wheat, poultry and live stock.

RAW MATERIAL: Coal; sufficient in quantity to warrant development.

BAXTER (BLIND SIDING), SHELBY COUNTY, ILLINOIS

County seat, Shelbyville, Illinois

SURROUNDING COUNTRY: Hilly, light clay. Price of improved land per acre, \$200.00; unimproved, \$45.00. Principal crops raised are corn, oats and hay.

BEECHER, WILL COUNTY, ILLINOIS

Population 800. Incorporated 1883. County seat, Joliet, Illinois

RAILROADS: Chicago & Eastern Illinois; Chicago, Milwaukee & St. Paul, and Pennsylvania located about three-quarters mile outside corporate limits.

SEWERAGE SYSTEM: Good drainage.

ELECTRIC LIGHT PLANT: Service from Kankakee, Illinois.

WATER WORKS SYSTEM: Municipal.

STREETS: Paved 1 mile with cement.

TELEPHONE SERVICE: Local and long distance; Illinois Bell Telephone Co., Harvey, Illinois.

FIRE DEPARTMENT: Volunteer.

SCHOOLS: 1 public grammar; 1 public high; 2 parochial.

BANKS: First State Bank of Beecher; Farmers State Bank of Beecher.

NEWSPAPER: Beecher Herald, weekly.

OPERA HOUSE: Community Building can seat from 500 to 700; seats removable.

HOTEL: H. Hach & Son; American plan.

CHURCHES: 1 Congregational; 1 Evangelical; 1 German Lutheran.

MUNICIPAL BUILDINGS: Post Office, rent \$35.00 per month.

SURROUNDING COUNTRY: Rolling; black soil. Price of improved land per acre, \$300.00; unimproved, \$150.00. Principal crops raised are corn, oats, barley and hay.

INDUSTRIES NEEDED: Any kind.

BENNETT, VERMILION COUNTY, ILLINOIS

County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois.

TELEPHONE SERVICE: Local and long distance; Illinois Bell Telephone Co., Danville, Illinois.

SURROUNDING COUNTRY: Gently rolling black soil. Price of improved land per acre, \$150.00. Principal crops raised are corn, wheat, oats and soy beans.

BENTON, FRANKLIN COUNTY, ILLINOIS

Population 8,700. Incorporated village 1875; city 1902. County seat

RAILROADS: Chicago & Eastern Illinois Railway; Illinois Central; Missouri Pacific Lines.

SEWERAGE SYSTEM: 10 miles.

ELECTRIC LIGHT PLANT: Service from Grand Tower, Illinois.

GAS PLANT: Piped from Duquoin, Illinois.

WATER WORKS SYSTEM: Private; Central Illinois Public Service Co.

STREETS: Paved 10 $\frac{3}{4}$ miles with brick and concrete.

TELEPHONE SERVICE: Local and long distance; Illinois Southern Telephone Co., Benton, Illinois.

FIRE DEPARTMENT: Paid.

PUBLIC LIBRARY: Benton Public.

HOSPITALS: Moore's; Williams.

SCHOOLS: 6 public grammar; 1 public high; 1 parochial.

NEWSPAPERS: Benton Evening News, daily; Benton Standard, Weekly.

OPERA HOUSE: Capitol, capacity 1,365.

MOVING PICTURES: Star, capacity 500.

COMMERCIAL CLUB: Benton Chamber of Commerce; N. E. Armstrong, secretary.

HOTELS: Franklin, Hudson, Bennett; all European plan.

CHURCHES: 1 Methodist; 1 First Baptist; 1 East Baptist; 2 Primitive Baptist; 1 Christian; 1 St. Joseph Catholic; 1 Nazarene; 1 Lutheran; 1 Christian Science; 1 Church of God; 1 Greek Orthodox.

FEDERAL AND MUNICIPAL BUILDINGS: County Court House, City Hall, State Mine Rescue Station. Post Office rented, \$137.50 per month.

SURROUNDING COUNTRY: Yellow gray silt loam, and gray silt loam on tight clay. Rolling.

Price of improved land per acre, \$30.00; unimproved, \$8.00. Principal crops raised are wheat, corn, oats, hay, livestock and poultry.

RAW MATERIALS: Coal, developed.

SPECIAL INDUCEMENTS: Good sites, plenty labor, good transportation.

INDUSTRIES NEEDED: Diversified industries.

BUSINESS AND PROFESSIONAL OPENINGS: Bank.

BISMARCK, VERMILION COUNTY, ILLINOIS

Population 300. Not incorporated. County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois Railway.

RIVER: One mile east of North Fork; not navigable.

ELECTRIC LIGHT PLANT: Service from Keokuk, Iowa.

STREETS: Paved 2 miles with cement.

TELEPHONE SERVICE: Local and long distance; The Rossville Telephone Co., Rossville, Illinois.

SCHOOLS: 1 public grammar; 1 public high.

BANKS: Farmers and Merchants State Bank.

SURROUNDING COUNTRY: Hilly; clay soil. Price of improved land per acre, \$40.00; unimproved, \$10.00. Principal crops raised are corn, wheat and peas.

RAW MATERIALS: Lime rock; developed.

CHICAGO, THE INDUSTRIAL CENTER OF THE UNION

CHICAGO is the industrial center of America because it combines most advantageously the greatest number of facilities and conditions necessary for successfully manufacturing and merchandising the widest variety of lines. The very fact of this concentration of varied commerce and industry gives Chicago a special and cumulative advantage, widening as the metropolis grows.

The Six Best Industrial Sellers

Six basic elements determine a city's place in industry:

- 1—Raw materials
- 2—Transportation
- 3—Power
- 4—Labor
- 5—Factory Sites
- 6—Market

A Reservoir of Raw Materials

Chicago has ready access to unlimited supplies of coal and the greatest deposits of iron and copper. Chicago is the leading distribution center for wool, hides and meat products. Chicago is the grain and lumber market of the world.

Ninety-five per cent of the nation's iron resources—75,000,000,000 tons—lie in the Lake Superior district, readily reached by water. Eighty-five per cent of all iron mined in 1920—approximately 72,000,000 tons—was taken from the Superior region.

The United States produces over one-half of the world's copper. Michigan was second among the states in 1919, producing over 200,000,000 pounds.

Not far from Chicago are the principal lead-mining areas of the country—southeastern and southwestern Missouri (the Joplin District), in 1919 producing 50 per cent of the American output.

The zinc output of Missouri measured 23 per cent of the nation's supply in 1919. Wisconsin and Illinois contribute a share.

Illinois oil fields have produced steadily since 1907. In 1919, Illinois wells filled 12,000,000 barrels. The area of the Illinois fields is 2,000 square miles.

States on the Great Lakes contain 100,000,000,-000 feet of timber, while the southern-pine region has 25 per cent of the country's supply. Chicago received in 1920, 2,412,887,000 feet of lumber and shipped 958,175,000. The business is larger this year because of increased building.

Sixty million pounds were the estimated receipts of wool during 1919. Shipments were figured at 50,000,000 pounds. Almost 31,000,000 pounds were received in Chicago on the backs of sheep during 1922 and over 10,000,000 pounds were shipped out on the hoof. A strong effort is being made to make Chicago the wool center of the country.

Seventy per cent of the country's supply of hides is used in or distributed from the Chicago

Aerial View of Union Stock Yards, Chicago.

district. The receipts in 1919 were 214,218,000 pounds; the shipments, 208,422,000 pounds. Approximately 145,000,000 pounds of hides came into the city on the hoof in 1919.

Chicago is the natural center of the greatest grain-growing sections of the world. Iowa, Illinois and Texas are the three leading growers of corn; Kansas, Illinois and Nebraska lead in wheat; Iowa, Illinois and Texas in oats; California, South Dakota and Minnesota in barley; Michigan, Wisconsin and Minnesota in rye.

In Illinois, Indiana, Iowa, Michigan and Wisconsin, 2,382,000,000 gallons of milk are produced.

Chicago received nearly 4,000,000 cattle and calves in 1920; over 7,500,000 hogs and more than 4,000,000 sheep.

Chicago's cold storage plants annually store 3,900,000,000 pounds of foodstuffs, valued at \$1,170,000,000.

More than 25 per cent of all the meat and packinghouse products produced yearly in the United

days to New York, Montgomery, Oklahoma City and Aberdeen; four days to Boston, New Orleans, Dallas and Trinidad; to other points, correspondingly fast time.

Chicago daily receives some 9,000 tons less-than-carload freight and ships some 15,000 tons.

Chicago & Eastern Illinois Freight Facilities

The C. & E. I. main freight station is located at Roosevelt Road and South Clark Street, with auxiliary stations at Englewood, Cragin, Clearing, Hawthorne, McCormick, Stock Yards, Central Manufacturing District, etc. Team tracks are adjacent to freight house. The C. & E. I.'s principal team track yard, however, is located at Canal Street and Twenty-third Street, the facilities there including also a platform for use in unloading automobiles, a modern electric crane for use in loading and unloading extremely large and heavy articles, etc.

A Modern Tendency

The modern tendency is to decentralize industry, to build branch factories and warehouses in the

Clearing Yard, Belt Railway of Chicago.

States is dressed and processed at Chicago. This is valued at \$1,083,090,000.

The World's Finest Railroad Facilities

Thirty-nine railroads, including twenty-four great railway systems—40 per cent of the railroad mileage of the United States—terminate in Chicago. In addition, four electric lines furnish passenger and freight service.

Fourteen hundred miles of belt lines—one-third of the belt-line mileage of the Union—encircle the city.

Twenty-five hundred through package-cars, destined for 1,800 points in forty-eight states, leave Chicago daily. In addition, these 2,500 destination-cars give transfer service to more than 60,000 other shipping points.

This through package-car service gives one-day delivery to Detroit, Evansville and Dubuque; two days to Pittsburgh, Nashville and Kansas City; three

leading markets. This is because of freight rate advances.

The manufacturer and distributor must have either an efficient branch or home plant in Chicago in order to control the Great Central market successfully.

The central location of Chicago—so readily accessible to all sections of the country—negatives the effect of increased freight rates considerably. Increases are not felt so sharply in Chicago because freight hauls to the biggest markets are short, when compared to less favorably located sections of the country.

A "spot" in the Great Central Market assures quick turnover.

The Cheapest Water Transportation

Chicago has 101 miles of waterfront—fifty-two miles equipped with both dock and railroad facilities.

In 1920, the lake trade of the Chicago district, comprising vessel arrivals and clearances, totaled almost 21,000,000 tons.

NEW YORK

CHICAGO

Illinois has begun work upon a waterway-development project to connect Lake Michigan with the Gulf of Mexico by a channel deep enough for great freight-carriers. Adoption of the Great Lakes-St. Lawrence seaway agreement seems a near-future certainty.

Chicago then will become a world port—possibly the world's greatest; anticipating that development, a large industrial harbor is being projected on Lake Calumet, at the southern end of the city.

What of the Air

The progress of aeronautics—both airplanes and dirigible balloons—has been relatively slow in this country since the European war, but the industry is due for revival and rapid growth. No one can predict accurately the future of air transport, but many authorities hold out great possibilities.

The central location of Chicago assures her prominent position on the air map; enthusiasts forecast her as the world-center of air travel and freight shipment.

Low-priced Coal Always Available

Illinois coal fields are extensive. In 1921 they mined over 60,000,000 tons, a production surpassed only by Pennsylvania and West Virginia. Illinois coal resources are estimated at 238,500,000,000 tons. The cost of this coal varies, of course, with supply and demand, but, because of proximity and transportation facilities, it is relatively cheaper in Chicago than in most industrial communities. And there is always a supply available.

First in Power Production

In 1921, Chicago's electrical central-station power supply, furnished from three large plants, with an aggregate capacity of 865,000 h. p., was the largest in the world and the cheapest. Now a new plant is planned to greatly increase the power supply. The surveyors of power are finding it exacting to keep pace with Chicago's industrial strides.

In 1921, the central-station supply company had 438,000 customers. The total load connected to the central-station supply lines was 1,896,500 h. p., of which 500,000 was in general power. While Chicago has but 2.5 per cent of the population of the United States, it produces 4.7 per cent of the power.

Chicago's gas rates are based on a sliding scale,

so adjusted to encourage the larger use of gas for commercial and industrial purposes. Rates are the same for gas used for light or power.

The Central Labor Clearing House

During the European war, Chicago felt labor-shortage less than any other city in the country; Chicago is the Great Central Labor market.

Manufacturers find every class of labor plentiful in Chicago and their wage efficiency is high. There are over 500,000 wage earners divided roughly among thirty-five nationalities of which Americans are approximately 31 per cent; Germans, 16 per cent, and Polish, 10 per cent.

Factory Sites Are Plentiful

Chicago has unlimited ground for expansion and more than 20,000 factories producing in 1919 merchandise valued at \$6,500,000,000 (in 1918, \$4,205,914,000; in 1917, \$2,325,914,000) are located in the metropolitan area.

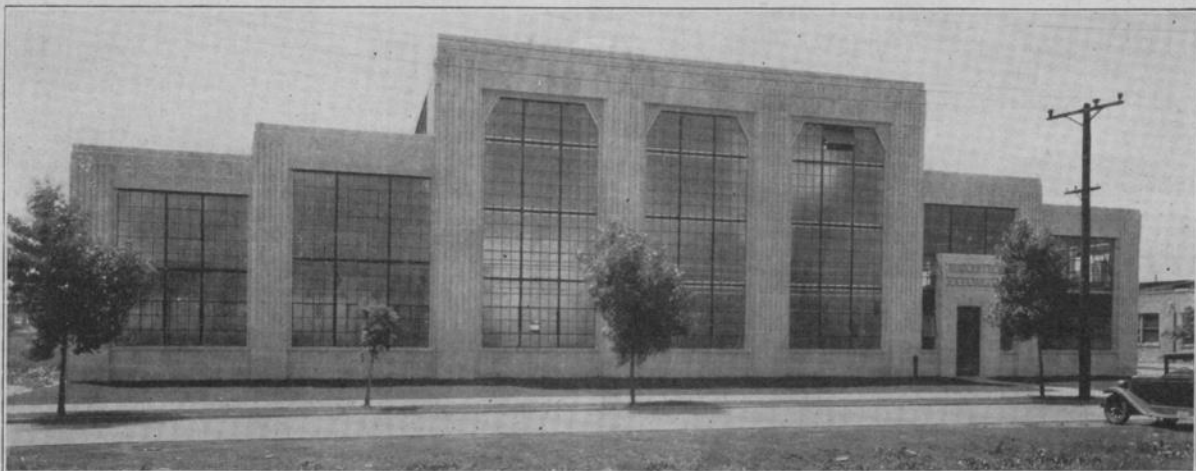

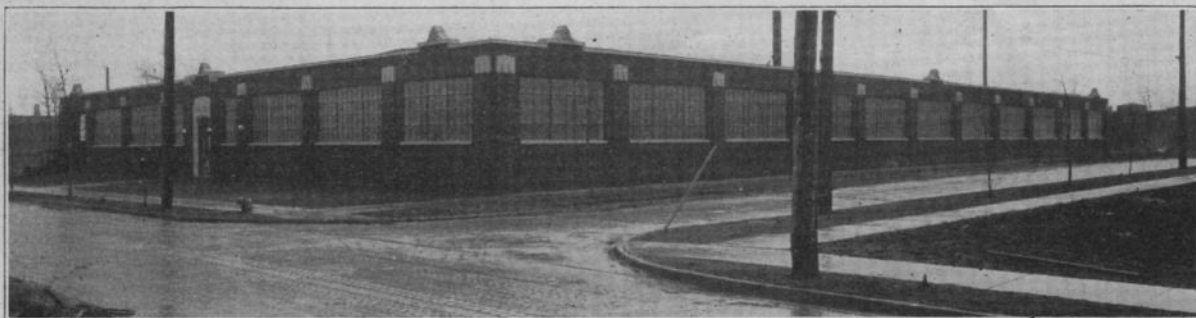

Improved and unimproved factory and warehouse sites, with or without rail and water connections, are readily available in Chicago upon most favorable terms. Responsible concerns can secure the erection of plants to suit their requirements, under term leases, or partial-payment contracts.

During the last year, building conditions have been very satisfactory in Chicago and there is every reason to believe that they will continue. The total number of buildings constructed in the first eleven months of 1922 was 11,777, valued at more than \$193,000,000. Every indication points to a great increase during the next few years.

Chicago is a center for building materials. It is the lumber market. The largest brick company in the country is situated here. Chicago produces 8,500,000 barrels of portland cement annually, nearly 10 per cent of the country's output.

Manufacturers will find attractive land values, low construction and equipment costs and the best banking facilities in Chicago. There are 1,400 miles of belt railroads, docks, sidetracks, trap-car, destination-car, tunnel and lighterage services—everything to make manufacturing convenient and profitable.

Chicago provides an exceptionally attractive environment. It is the educational center of the United

States; libraries, playgrounds, parks, bathing beaches and schools abound.

The Great Central Market

Chicago is the distributing center of the United States. With the improvement of waterways, Chicago will become one of the great ports of the world.

The wholesale trade of Chicago was estimated in 1920 to be \$6,000,000,000. It is the world market for grain, lumber and livestock. Chicago leads in the distribution of drygoods, general merchandise, food stuffs, seeds, machinery, jewelry, pianos, wearing apparel, automobiles, furniture and household utilities.

Chicago has a consuming population of 3,000,000. In the immediately surrounding states—the geographic center of the United States—are 18,000,000. Within a twelve-hour radius of the city live 50,000,000 people, almost half of the nation's population. Chicago serves the richest agricultural section of the country.

Chicago's foreign trade is developing rapidly. Chicago-made or Chicago-sold goods are known and used all over the world. Bankers estimate the foreign trade of the city around \$2,000,000,000. The bulk of this is grain and packing-house products; the remainder is made up largely of agricultural implements, printing presses, machinery of other sorts, hardware, shoes and condensed milk.

The Financial Center of the West

Chicago is the financial center of the West, with

floor loads and large shipping platforms are desirable.

Taxes comparable with the smallest communities in the state produce large savings, as compared to city locations, in both real and personal property taxes.

Furnished by Public Service Company of Northern Illinois.

Ground is perfectly level. No grading required. Subsoil a stiff clay, easy to excavate and carries heaviest foundation without reinforcing.

Moderate concrete sewer system now installed emptying into Sanitary Canal.

The best home labor districts of Chicago, especially those on the South Side and reached by street car lines, one at Sixty-third Street and one on Archer Avenue, at the city fare to all parts of Chicago. A labor residential district at Clearing, within walking distance, comprises a population of about 6,000 and is rapidly growing. This local labor supplemented by the great working population of Chicago to draw from gives Clearing industries an ample, well diversified and dependable supply of both skilled and unskilled labor. The Clearing District is only a short trolley ride from a population center of one million people in the southern part of Chicago.

Chicago's principal belt railway—The Belt Railway Company of Chicago serves all industries in the District by private switch-tracks from Chicago's freight clearing house, its Clearing Yards handling

C. & E. I. Ry. Co., "The Service Road of America."
Local Freight Office, Clark Street and Roosevelt Road, Chicago.

banking resources of almost \$4,000,000,000. Several of the country's foremost banks are located in Chicago and the city holds an important place in world finance.

The deposits in national and state banks in Chicago in 1920 totaled over \$2,000,000,000, of which savings ran almost \$492,000,000. Bank clearances for 1920 figured \$32,669,333,535.72.

Weather Stops No Industry

Chicago winters are never severe enough to stop manufacturing; summer heat never interferes with production processes. Rare, indeed, is the snow that blocks Chicago transportation; lake ports are closed by ice but a short time each year.

The Clearing Industrial District, comprising over 3,000 acres, is outside and immediately adjoins the city limits of Chicago in the vicinity of Sixty-third Street and Central (56th) Avenue. The district is a 35 minute drive from the downtown part of Chicago.

The Clearing District is under one ownership and management and is planned and developed for the definite purpose of creating an ideal factory and warehouse center; to provide ready for use the facilities and conditions essential to successful plant operation. It has ample capital, and through its experienced organization can carry out a building project so that manufacturers or warehousemen have no more trouble or effort than moving into an existing building.

Standard factory and warehouse buildings to suit individual requirements are erected by the District under term lease or purchase contract.

The moderate land value makes it practicable to construct one-story factory buildings where heavy

and classifying 6,000 cars a day, making empty cars always available, and allowing them to be handled from and to the industries to points outside of Chicago with greater dispatch than when they have to pass through the various smaller and more congested yards. The thirteen trunk lines, owners of the Belt Railway of Chicago, as listed on the back of the folder operate into the Clearing Yard with their own trains for classification, and also pull out classified trains to destination points. (Exceptionally good switching and transferring service to and from all lines is furnished.)

A universal L.C.L. station is maintained by the Belt Railway at Clearing for both inbound and outbound L.C.L., with trap car privileges to and from the industries.

Daily package cars for principal cities are made up at Belt Ry. freight house.

Clearing is in the Chicago Switching District. The Chicago basis of rates applies on carload traffic and on outgoing and incoming L.C.L. shipments to and from practically all points via all railways.

The Landon Cartage Company, operating 100 trucks, has a station in the District for the prompt and economical handling of local deliveries. All shipments received up to 12:00 noon are delivered within the city limits the same day. Shipments received after 12:00 noon are delivered within the city limits the following morning.

Shipments to suburban points within 35 miles of the Clearing District are delivered the following day. There are several smaller companies operating throughout the District.

The Goodrich Transit Lines and the Goodrich Westport Lines operate a station in the District for inbound and outbound freight.

The Universal Carloading & Distributing Co. and the Judson Freight Forwarding Co. pick up daily

freight for their consolidated cars on the same basis as from any other point in Chicago.

The American Railway Express Co. has a daily pickup and delivery service in the District.

The North Shore Electric Railroad picks up freight for their line and delivers freight to Clearing industries without expense to shipper.

Street names and numbers conform to Chicago practice. Mail for Clearing addressed same as if in Chicago. Carrier service from Clearing Station of Chicago Post Office, located at the entrance to the District at W. Sixty-Fifth Street and Central Avenue.

THE IMMENSITY OF CHICAGO'S FREIGHT TRAFFIC

(Excerpts from a booklet published by the Chicago Tunnel Terminal Corp.)

A first idea of the volume of traffic that is created by trade and manufacture in Chicago may be obtained from the statement that over 70,000 teams, motor trucks and delivery cars are engaged in carrying it. That is the number of vehicles of those kinds licensed by the city.

A considerable part of the freight carrying done by these vehicles is to and from railroad terminals. Activities at railroad freight terminals consist in the gathering and loading and the unloading and distributing of freight which is to be or has been transported.

In addition to teams and trucks, this gathering and distributing process calls for a great variety of other facilities, such as side tracks, loading platforms, hoisting apparatus, docks, warehouse equipment and so forth.

Freight is of many kinds. In transportation parlance it is divided into two main classes—bulk freight and package freight. Package freight is again divided into car load lots and less than car load lots, commonly abbreviated as l. c. l.

For present purposes we may dismiss all consideration of bulk freight for railroad carriage, and of package freight in car load lots. We are not concerned with transportation by railroads, but with the gathering of package freight for such shipment, its passage from points of origin within Chicago to railroad terminals for loading and from those terminals for distribution to consignees.

We are to some extent concerned with the carriage of package freight from city stores to their customers, with the hauling of bulk freight of some special kinds within the city, coal and cinders, for instance, and with the disposal of excavated material from new buildings and structures within the central business district, known in the vernacular as the "loop."

Tunnels Important Part of Chicago's Scheme of Trade and Transportation

The gathering and distributing of package freight and the hauling of coal, cinders and excavated material in the districts they reach, are the

particular services rendered by the Chicago tunnels which are owned and operated by the Chicago Tunnel Company and the Chicago Warehouse and Terminal Company. The facilities of these companies have been developed and are operated for the purposes mentioned.

The operation of the tunnels and the transportation of the kinds of freight mentioned under the streets of Chicago have far-reaching consequences. In their economic aspects, the tunnels are an integral part of Chicago's great scheme of trade and transportation and they are savers of time, labor and money.

In their civic aspects they relieve street congestion, eliminate wear on the pavements and reduce the volume of noise and dirt. They offer sanitary advantages in the movement of foods and perishables because the tunnels are clean and the air is pure and of even temperature. They are an influence in lowering the much-discussed cost of distribution and cut down the waste.

The tunnels are forty feet under the surface. They are below the sewers, below the mazes of pipes, wires, cables and conduits, below the level of any subway that may be built. They are unheard as well as unseen. Unlike a tunnel through a hill or under a stream, they emerge nowhere. They are reached only by elevators and they end against blank walls of concrete. They are apparently known to few beyond the ranks of those whom they serve. Some of their most pronounced virtues—the relief of traffic congestion, for instance—are negative. They would have to vanish or cease operating to be missed but, alive and present, they are a commonplace and conventional drudge, an accepted public servant which does its work so well that it causes no trouble. Other franchised corporations call attention to themselves in many ways and often enough. Their services reach into the homes. They are in sight on the streets. Their equipment includes such things as poles, wires, cars and elevated structures. The tunnel company, however, never digs through the pavements. It never interferes with street traffic. It never litters the streets with repair gangs and equipment. It is underground, silent and, unfortunately, little known.

Gathering of Package Freight Is a Problem of Many Complexities

The great business of the smokeless, noiseless, unseen tunnels is the transportation of package freight. By the testimony of those who use them, they have brought nearer to solution the extremely complex problem of gathering and delivering this kind of freight in the crowded section of a crowded commercial city. Transportation is an essential accessory of trade and commerce in the means it affords of reaching distant places as well as in the gathering of the freightage from the thousands of points where it originates.

A long freight train is a finished work. There is nothing but a journey ahead of it. Behind it, however, is the great task of gathering together the materials with which it is laden. The materials come from many sources. If they consist of package freight, the problem of gathering is perhaps no more difficult than in the case of bulk freight,

but it is more complex. Package freight comes in dribblets—in hundredweights or less, more often than in tons. It comes from everywhere and it goes everywhere. Twenty-five hundred cars of it, in less than car load lots, leave Chicago every day over twenty-eight railroads for an unreckoned number of destinations. Perhaps as much more arrives every day from an unreckoned number of points for distribution throughout the city. And, through Chicago, a great railroad center where all railroads end, or begin, there pass every day thousands of consignments, transferred from railroad terminal to railroad terminal, much of it through the tunnels and much of it by truck through the streets. Often it is through the streets of the central business district.

This package freight has many handlings in the course of its preparation for shipment. It moves from shipping room to truck, from truck to freight house, from freight house to railroad car. If it is delivery from store to customer, or from freight

Entrance to Union Stock Yards, Chicago.

terminal to consignee, the process differs but little. In the latter case it is the reversal of the one first stated, while deliveries from stores are made by motor truck to a substation and from there by delivery car to the customer's residence.

In the process of gathering for shipment by railroad, the freight of each shipper does not go to one freight terminal or in one direction. One shipper may send goods in all directions and over many railroads.

Preparing Freight for Shipment Over 28 Railroads in 2,500 Cars Every Day

A truck laden with package freight may visit half a dozen terminals; more likely, three or four trucks, none fully loaded, will be used, but however many the trucks, there will be delays in congested streets, waits at each freight warehouse and the time of their performance may not be estimated with any degree of accuracy.

When we consider, somewhat blindly, of course, the great number of shippers, the vast number of shipments, the equally great number of consignees and destinations, we may conclude, without being very particular about totals, that the gathering of twenty-five hundred car loads of miscellaneous package freight involves many thousands of separate operations, many thousands of acts of selecting, wrapping, boxing, bundling, marking, checking, loading, trucking, unloading and reloading, to say nothing of making records, before the contents of the twenty-five hundred cars are ready to proceed to their many destinations. And then we must consider the reverse of the process for the in-bound freight.

It should be added that each of these processes costs something. Every movement of the arm of labor, every turn of a rubber-shod tire, every puff of a motor, every splash of ink, every use of equipment, adds its mite to the cost of the goods which

are sent on their way. Conversely, every movement, turn, puff or splash that is eliminated reduces the cost and adds to the profit. In its entirety the process of preparing for shipment and the shipment constitutes an important part of the pressing problem of the cost of distribution which frets economists and is of great concern to all business men. For several years business has been studying and investigating this problem of wastage which in its entirety was recently estimated by the director of the Bureau of Foreign and Domestic Commerce to reach the astounding amount of eight billion dollars a year. Anything that will reduce the sum of it is regarded as an achievement of great moment.

Equipment of the Tunnels and Devices Which Make Them Safe, Dry and Airy

As an engineering project the tunnels measure up to the highest standard. The tubes are six feet wide inside and seven and one-half feet high, shaped like a horseshoe. They are bored through a stratum of blue clay and the walls are faced with concrete a foot thick. There has been no perceptible settling and the foundations of the buildings adjacent to the tunnels have remained unaffected.

It would be the natural expectation that these long, dim corridors, forty feet below the street levels, would be damp and thick with heavy air. As a matter of fact they are dry, cool and airy. The ventilation is sometimes too good. Currents of air, rushing for the shafts, are stirred by the trains and from the river drifts they blow with chilling vigor. The temperature is practically constant at 55 degrees.

As a provision against dampness there are sixty-three electric pumps and a complete system of pipes and eleven hundred sumps from which any accumulations of water are raised to the sewers above. There is very little seepage. The tunnel floors are dry and clean. Waterproof and fireproof doors are provided to isolate connections with buildings and commercial terminals in case of fire or water from above.

Scientific tests have shown that the air in the tunnels is remarkably pure. It is drawn up from them through shafts for the ventilating and cooling of many buildings and theaters.

Exchange Building, Union Stock Yards, Chicago.

The noise made by moving trains is all that breaks the silence in the tunnels. They are a railroad in their organization and everything in their operations suggests order and system. The designation of lines as "one way streets" gives some liberty in the operating of trains, but the motorman of one train will probably tell you what another train, passing an intersection, is loaded with, where it is from and where it is going. The loading of coal and refuse material is mechanical and one man can load a train. Of the source of the material nothing is observable except the end of the chute. Cars de-

CONTINENTAL ICE CO.

Railroad Icing Contractor

31-33 South Clark Street

CHICAGO, ILL.

livered to their destinations pass on to higher levels and trains are made up of cars that descend on elevators from shipping rooms above. There are no interferences, no crossing gates, no other kind of traffic, no congestion, no delays.

Relieving Congested Streets of the Equivalent of 5,000 Truck Movements

The tunnels are lighted at all connections and elsewhere when other than the train lights are needed. Signal lights protect the trainmen when delivering or switching cars. Glass reflectors at all intersections give warning of an approaching train from lateral lines. Electric lighted signs announce "curve ahead," and warn to "go slow" or "come to full stop." Each "river drift" is protected by an automatic block signal. The motormen are thoroughly familiar with right-of-way rules and the tunnels are all "one-way streets." Signs at the corners show what streets one is under but it is of little consequence. The trainmen know the corners and it doesn't seem to matter that each one is exactly like all the others.

Nothing has been spared to make operation safe as well as efficient. A train dispatcher in the central station controls all train movements. He has over 300 telephone connections with the tunnels and keeps a dispatcher's regular sheet of train locations and movements.

The rolling stock of the tunnels comprises 150 electric locomotives and about 3,300 freight cars of all classes. The usual car is open and fitted with stakes and bands to protect the load. The car is about four feet wide and twelve feet long and will carry from one to six tons, depending on the commodity. The coal cars hold four tons and those used for the disposal of excavated material and cinders hold three and one-half yards.

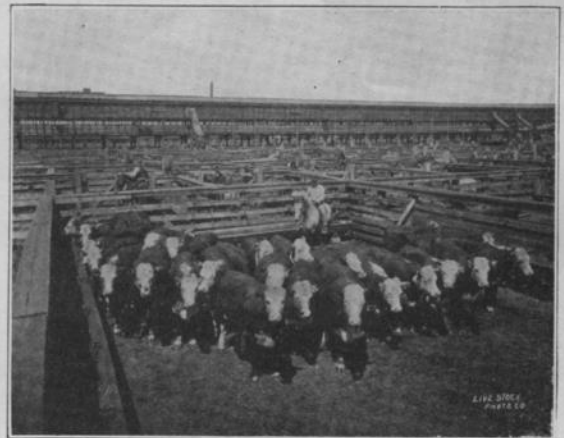

It appears that a tunnel car carries about as much of a load as a motor truck. In the tunnels there is an average of about 300 train movements a day and a train is from ten to fifteen cars. The movement of freight in the tunnel is about equal to 5,000 motor truck movements on the streets. If the tunnel freight were carried on the surface these 5,000 truck movements would occur in the streets of the loop and the district immediately adjacent every day.

Coupled together the trains that pass through the tunnels daily would extend over ten miles. Motor trucks, carrying the same amount of freight, if allowance is made for spacing between them, would stretch along the highways in a continuous line for something more than three times that distance. Without the tunnels there would be added to the traffic in the loop and immediate vicinity a line of motor trucks that would extend from Madison Street to Waukegan. Tunnel service is the one reason why that additional traffic is not in the loop streets.

Economy of Tunnel Freight Service and an Illustration of the Saving

Tunnel service is practically indispensable to the great warehouses whose storage space is necessarily supplemented by shipping facilities. These ware-

houses are at once cause and result of Chicago's pre-eminence as a distributing center and a market. The tunnels serve the Railway Terminal Warehouse, the Currier-Lee Warehouse, the Crooks Warehouse, the Chicago & Alton Terminal Warehouse, the Western Warehouse, the Soo Terminal Warehouse, the Tooker Storage and Warehouse, the Central Cold Storage Warehouse and the warehouses of the North Pier Terminal Company which extend over 1,200 feet along Illinois Street, with the Michigan Canal giving ship landing facilities on the opposite side. Tunnel tracks run the entire length of this building and, from its office there, a tunnel company representative receipts bills of lading for shippers. These buildings have many tenants, jobbers and manufacturers as well as users of storage space. The tunnel service is rated as a distinct advantage to both the warehouse company and its tenants. One of the warehouse company's officers said that the tunnel

Scene in Union Stock Yards, Chicago.

facilities were about equal in value to all of their other facilities. He illustrated it by saying that one of the new tenants who, in another location had used trucks for carting, had found his costs for freight delivery reduced by an amount equal to 65 per cent of his rent. The use of the tunnels brings advantages which are expressed in terms of cash as well as in the savings of time and labor.

Two Thousand Tunnel Cars of Freight Delivered Railroad Terminals Daily

The same department store receives sixty tons of coal a day by tunnel and loads its ashes and cinders mechanically into tunnel cars for disposal. Altogether the development and use of tunnel facilities by this one concern relieves the streets of the loop of more than one hundred truck movements a day.

Naturally the largest business of the tunnels is with the railroads. Two thousand tunnel cars of freight are delivered to the various railroad ter-

minals daily and eight hundred cars are loaded for delivery to local consignees and other railroads. In a year the tunnels deliver to railroad freight terminals about 650,000 tons of package freight—enough to load approximately 100,000 ordinary freight cars.

Connections with railroad freight terminals are universal. They are in the usual form in use by commercial houses but with larger track facilities. This business generally affords a great relief to street traffic, but it is also apparent that, without the tunnel service, the business of thousands of shippers would be sent direct to the freight terminals and their teams and trucks would congest the railroad team yards and receiving doors. This additional business on the surface would, in many instances, necessitate additional facilities at the railroad terminals.

Four Universal Freight Stations Open the Tunnels to All Shippers

The Chicago Tunnel Company's four public receiving depots, known as Universal Freight Stations, are outside the loop, but each of them is strategically located for business from that district. Station No. 1 is at 746 West Jackson Boulevard, where the general offices of the company are also located; No. 2 is at Erie and Kingsbury streets, No. 3 is at Seneca and North Water streets, and No. 4 is at Canal street and Roosevelt Road.

These stations are for the use of shippers who have no private connections with the tunnel right of way. At their doors freight is received for shipment over all railroads and the entire job of shipping is completed there. The Tunnel Company is a common carrier, subject to the supervision of the Interstate Commerce Commission and issues through bills of lading.

The operation of receiving freight at one of these stations has a significance.

The driver registers upon arrival with his load and the time is noted on the clerk's sheet. He gives the bill of lading for his load to the revising clerk who checks the routing. During the unloading the tunnel clerk checks the freight against the bill of lading, which is then signed and returned to the driver, and the time is entered on the clerk's sheet. Shipping orders are manifested and travel with the freight from the tunnel station to the terminal of the railroad over which it is routed.

At the universal stations freight for forwarding over several railroads and for several destinations may be received from the truck. The tunnel force sorts it and delivers each consignment to the railroad designated. The shipper, or his representative, completes the entire task of shipping at the tunnel station.

The alternative method is in striking contrast with this single, simple proceeding. Instead of one delivery of a dozen consignments to the tunnel station, a truck, or several trucks, with the dozen consignments are loaded and start on their way to perhaps a dozen railroad freight terminals—through the streets of the loop and around it, through the congestion, stopped by traffic lights, from traffic jam to traffic jam.

Dearborn Street Station, Chicago, Ill., the Passenger Terminal of the C. & E. I. Railway.

A CENTURY OF PROGRESS
Chicago International Exposition of 1933

PURPOSE

A Century of Progress is a Corporation, not for profit, organized under the laws of the State of Illinois. Its function is to conduct an International Exposition to be held in Chicago in 1933, in celebration of the Centennial Anniversary of the granting of the charter organizing the inhabitants of the little settlement on the shores of Lake Michigan into a corporate village.

Theme of Exposition

The century which has encompassed the life of Chicago is the century in which man has made his greatest progress toward understanding the laws of nature and using its force for his own purposes. It has witnessed the general introduction of steam and electricity and all those modern conveniences that have ministered to human comfort. The distinctive character of the century to be celebrated has suggested the name "A Century of Progress" and has required that the central idea or theme of the Exposition should be to attempt to demonstrate to an

life as a municipality is not a local matter. The announcement of its plans has attracted national and even world-wide interest. Its objects and aims are of such a nature as to have induced congress to recognize that national support is in all respects desirable and could not, in justice to federal activities, be withheld. The Exposition is therefore in every sense an international one sponsored by the Federal government.

Location

The Exposition has secured, by negotiation with the South Park Commissioners in Chicago, the right to use for exhibition purposes as much as may be necessary of some six or seven hundred acres of newly made land destined to become an important link in the park system of Chicago. This land lies along the lake front opposite the very heart of the city and only two or three city blocks therefrom; in fact, the main business section of Chicago is separated from Lake Michigan only by the park system itself.

To be included within the grounds of the Exposition, and already in full operation, are the Adler Planetarium and a great stadium known as Soldier

Main facade of the Administration Building of Chicago's 1933 Century of Progress Exposition, where approximately 200 workers are now engaged on exposition plans. The building is 350 by 150 feet, of modernist design and located on sloping filled-in land between the lake shore and the outer drive at Fourteenth street. On the lake side, three wings are stepped down in terraces to the water's edge. On this side the building is three stories high. On the

opposite side (shown above), it is two stories high. The central wing contains a restaurant for exposition employes, the president's and manager's suites, trustees quarters and a reception room for distinguished guests. The building, first exposition structure to be completed, was designed by the three Chicago members of the World's Fair Architectural Commission—Edward H. Bennett, Hubert Burnham and John A. Holabird.

international audience the nature and significance of scientific discoveries, the methods of achieving them and the changes which their application has wrought in industry and in living conditions.

An International Exposition

The international character of the Exposition is indicated by the fact that on February 5, 1929, a joint resolution of Congress was approved authorizing the president, on assurance that five million dollars had been raised by the corporation, to invite the nations of the world to participate in the Exposition. This assurance having been given to the president the invitation was sent through our diplomatic officers to all nations on January 10, 1930.

The Century of Progress, held in connection with the completion of the first century of Chicago's

Field, having a seating capacity of over 100,000. At the gates of the Exposition are the Field Museum of Natural History and the Shedd Aquarium, and a few blocks to the north is the Art Institute of Chicago, an art center of international reputation.

The features above enumerated are permanent structures, which could not be duplicated without the expenditure of enormous sums of money.

Progress of Construction

Through the collaboration of a committee composed of some of the most eminent architects in the United States, representing various sections of the country, a unified and harmonious plan of the buildings and grounds has been evolved. The work of preparing the ground and erecting some of the more important Exposition buildings is well ad-

vanced. The Administration Building is completed and is now occupied by the administrative staff of the Exposition; the Transportation Building, constructed of steel, with a floor area of approximately eight acres, with its dominating feature a departure from ordinary engineering practice, consisting of a steel dome two hundred feet in diameter suspended from a catenary system of cables, is practically finished; and an exact replica of old Fort Dearborn, destroyed by the Indians in 1812, with its palisades and log-walled block house and barracks is now available for use.

Convenience of Location

All transportation lines in and to the city, both land and water, converge at or near the site of the Exposition, thus affording ample facilities to a population in the city of Chicago of 3,400,000, with approximately 4,700,000, in what may be called the Metropolitan District, and with nearly half the population of the United States within a night's ride. It is believed that no Exposition has ever been favored with a site so easily accessible to such a large number of people.

Collaboration of Scientists

In order to carry out the theme of the Exposition as previously outlined, the cooperation of the National Research Council of the United States was obtained. Under its guidance and assisted by over four hundred of the leading scientists of the country a general plan of exhibits has been formulated.

Basic Science Exhibits

The central feature of the Exposition will be the exhibits in the Basic Sciences. These will demonstrate, in a readily understandable manner, those fundamental discoveries in pure science which now form the basis of human progress.

The aim of the Exposition is to put these results before the public in words of one syllable, so to speak. Here the visitor will be able to see those

electric and magnetic phenomena which have proved so valuable to the engineer. Here he will be shown the new fields of chemistry opened up by the easy production of liquid air and by the discovery of radio activity. Those biological discoveries which have made possible the recent advances in medicine and public health will also here be seen.

Applied Science or Collective Exhibits

This central feature will be supplemented by exhibits showing the development, especially during the last hundred years, of various industries, resulting from the application of scientific discoveries. These exhibits are to be made through the cooperative effort of each industry as a whole, presenting for each industry shown, a picture of its origin or genesis, development, service and needs.

Individual Exhibits

Since each industry in its present stage of development must necessarily be presented in order that a true picture of that industry may be obtained, producers will be permitted to make individual exhibits, which will be shown in as close proximity to the applied science or collective exhibit or the particular industry as conditions permit.

Social Science Exhibits

Insofar as may be practical, the general plan for industrial exhibits will be applied to others demonstrating the changes in social relations which have been the natural consequence of the discoveries in science, and which have culminated in our present civilization, together with the changes which present trends indicate may logically be anticipated in the near future.

The past century has witnessed nearly the entire development of popular education, the progress made in the prolongation of human life, the planning of modern cities, and the realization of the vast importance of providing for the welfare of the child.

REPRODUCTION OF FORT DEARBORN.
CENTURY OF PROGRESS, 1933.
D. H. BURNHAM, DIRECTOR OF WORKS.
ERSKINE-SIMPSON, INC. BUILDERS.
TAKEN BY L. AND NEG. NO. 2512.

Blockhouse and soldier's barracks of the "third Fort Dearborn," reappear on the shore of Lake Michigan at 26th Street as part of the 1933 Century of Progress Exposition. Near here stood the original

blockhouse and barracks of the old fort whose inhabitants were victims in 1812 of the Dearborn massacre—eventful day in Chicago's pioneer history.

Agriculture

Chicago is the center of one of the largest agricultural sections of the country, and is indeed itself largely the product of the farm. It is therefore the intention that this branch of industry on which the life and welfare of our people depend shall receive special recognition, with particular attention to science and its past and future application to agriculture.

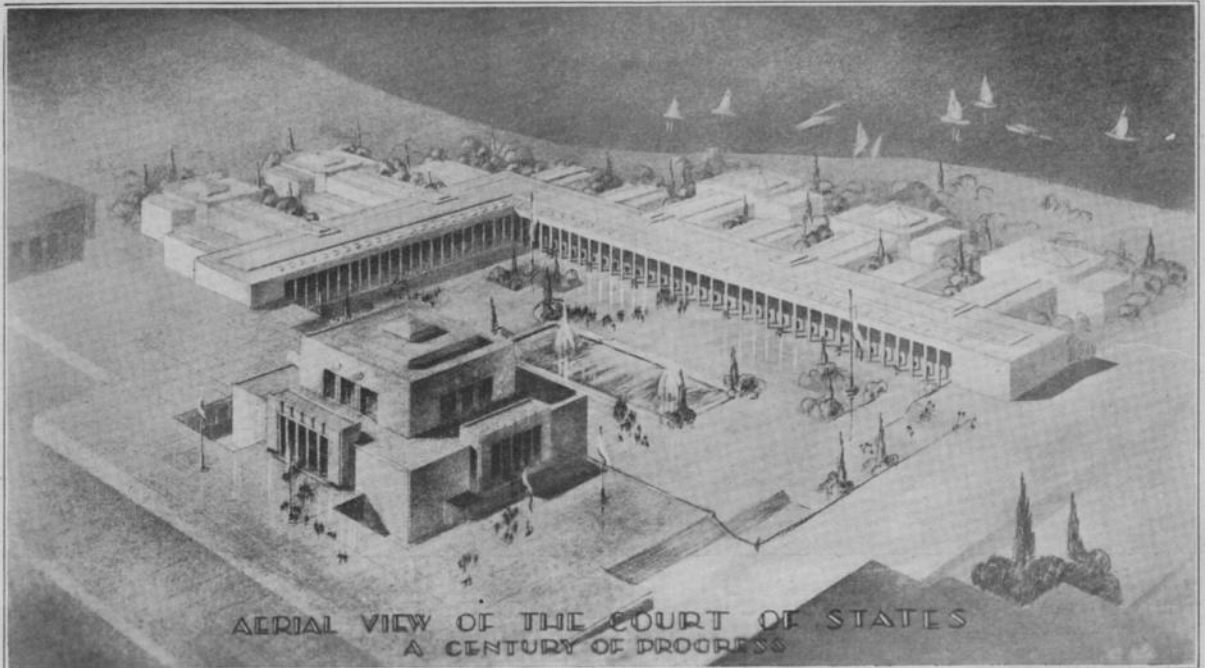

Art

There will be an Art exhibit, for which it is desired to secure the best works of art from public

states are taking active steps looking towards participation. Many of them have introduced appropriation bills into their legislatures or are otherwise taking steps to raise the money necessary for complete and adequate representation. Of the states that have done nothing so far, the majority do not have meetings of their legislatures until the coming summer, which is a sufficient explanation for no action being taken up to the present time.

Foreign Participation

Before approaching foreign governments, the Exposition authorities gave serious study to the

Artist's conception of the proposed Court of States at Chicago's 1933 Century of Progress Exposition. In this structure, the states and territories will exhibit not only their resources and present development, but the possibilities of future progress opened up by the application of scientific principles to indus-

trial and social problems. Architects are considering a plan to group the Court of States about a central unit to be occupied by the federal government exhibits, so as to symbolize the essential unity of state and federal governments.

and private collections in this country and throughout the world.

Housing Exhibits

A housing exhibit is in course of preparation, which will demonstrate the best methods and means of securing attractive homes for people of moderate and small means.

Concessions

Concessions will be granted for various services, for amusements and other sources of comfort and entertainment.

Other Features

The program of the Exposition also includes congresses and conventions, music, sports, pageants and other features of general interest.

Federal and State Participation

The United States government and practically all of the states of the Union are also expected to participate by making exhibits. Legislation providing for government participation, with an appropriation for \$1,725,000.00, is pending. It has passed the Senate, but, owing to parliamentary technicalities, failed to come before the House of Representatives for a vote at the session just concluded. The House was unable to give it consideration in the hurry of the closing hours of the last session. The United States is practically committed to participate and it is anticipated that there will be no difficulty in the final passage of the legislation at the next session. Up to date, although no negotiations with the states were begun until a few months ago, thirty-eight

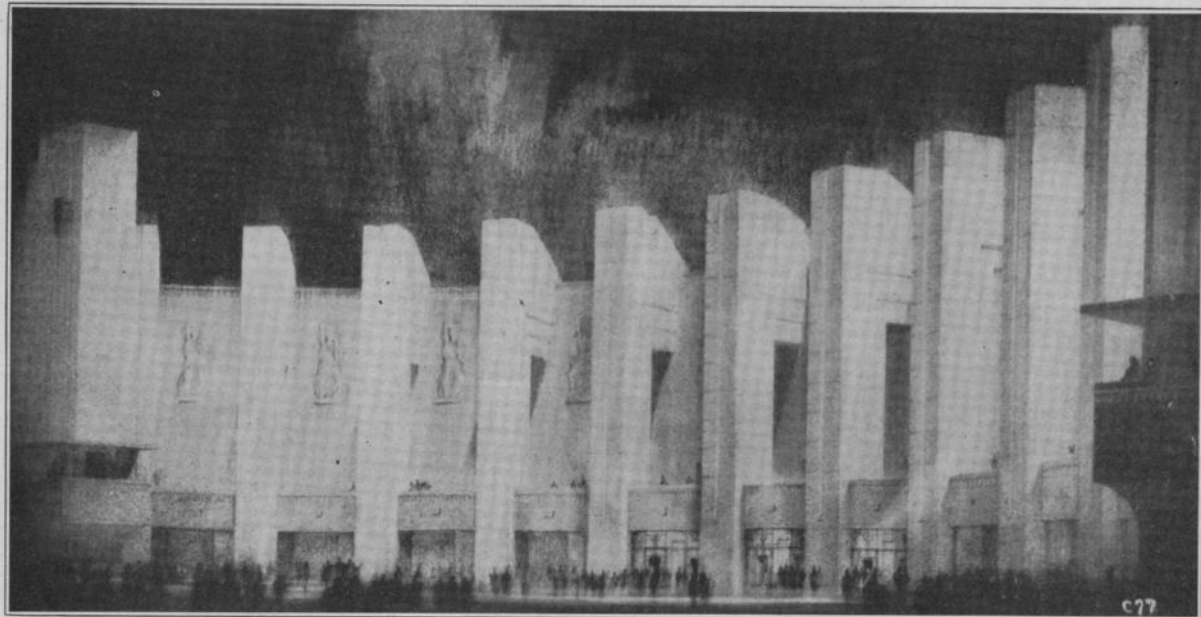

question of a form of participation which might be advantageous to the participating governments themselves. They also established an office in London so that there might be a point in Europe where participating governments could secure authoritative information without the necessity of sending representatives all the way to Chicago.

The basic science exhibit previously mentioned will be collected and arranged by the Exposition. Where any of the important steps to be shown have been made by a citizen or citizens of a foreign country they will be placed in their proper places, with legends giving credit to the country of origin and to the responsible individual or individuals. It is hoped that foreign governments and men of science will cooperate in making these exhibits complete. Generally the question of what is deemed necessary to include in each of these exhibits will be decided by the Exposition authorities, in consultation with expert scientific advisers, giving due consideration to suggestions or recommendations which may be made by men of science in other countries. In other words, these basic science exhibits will be truly international in character, and so far as practicable, a truthful representation of the historic facts. In the case of scientific exhibits the cost of exhibiting any article, model or piece of apparatus from any source whatsoever supplied on written request of the exhibition authorities will be borne by the Exposition itself.

The collective exhibits showing the application of science to industry will also be world-wide in their scope. This can be accomplished best by cooperation between those associations in the United States which accept the responsibility of demonstrating

industrial progress during the past century, and their conferees in the same or similar industries abroad. The Exposition authorities will lend their assistance to further any such cooperation desired by foreign industrial associations. In these historical industrial exhibits, the advantages which each industry concerned will derive from presenting to the public the details of its growth, the care taken in the preparation of its products, and the various uses of those products, justify the expectation that the various

industries will gladly defray the necessary expenses involved in collecting, preparing, installing, and, where necessary, demonstrating, such features as may be needed to make each exhibit complete. Many of the great industries of the United States have already accepted this principle, and are preparing to expend large sums of money for this purpose. Participation by foreign nations in the collective or applied science industrial exhibits is invited on the terms above indicated.

North facade of the Cret building, fourth Chicago 1933 World's Fair building, construction of which will commence early in April at Sixteenth St. and Leif Eriksen Drive. The twelve tall pylons arranged in a semicircle, form a striking architectural feature.

Architect's drawing of the fourth Chicago 1933 World's Fair Building, construction of which will commence early in April. Designed by Paul Cret, eminent Philadelphia architect, the structure will present the appearance of a metal and glass creation, rising from colored terraces, and brilliantly illuminated.

The building will be 700 by 400 feet, two stories and a mezzanine in height, and will probably house the basic and medical science exhibits. It will be u-shaped, the open part facing east and surrounding

a huge rostrum capable of accommodating several thousand persons. At one corner will rise a 176-foot tower fitted with a carillon.

The Cret building will be located at Sixteenth St. and will stand across Leif Eriksen Drive. The north end will be joined to Northerly island by means of a bridge.

The Cret building is the first of a group of exhibition buildings which will rise along Leif Eriksen drive. It will be completed by Fall of 1931.

In those cases in which the Exposition authorities feel that the collective exhibit prepared by the industry is incomplete, they may make request of individuals, either in this country or abroad, for particular exhibits, in which case no charge for space for such items will be made.

Individual exhibits presenting to the public the present state of each industry will necessarily include marketable articles illustrating current practice and will serve the purpose of increasing the market for the exhibitors' products. Exhibitors of foreign nations will be treated on exactly the same basis as to terms and allotment of space as those of the United States. What is said above in this paragraph applies to those industries which may be selected for exhibition purposes because of the great part which scientific discoveries have played in their development. It is these industries especially in which individual exhibits of their present state are desired. However, it may be that other industries may desire to make exhibits designed primarily to increase the market for their products. Such exhibits will be permitted, subject to the condition that they are not inconsistent with the underlying philosophy of the Century of Progress. The expense of all such exhibits will be borne by the exhibitors, under the usual regulations, which will provide, among other things, that the exhibitors in such cases shall pay the standard rates for space required. As the primary object of the Exhibition is non-competitive, industries which are not necessary to the historical exhibits will not be urged to participate, but voluntary participation on their part will be welcomed under the conditions set forth above.

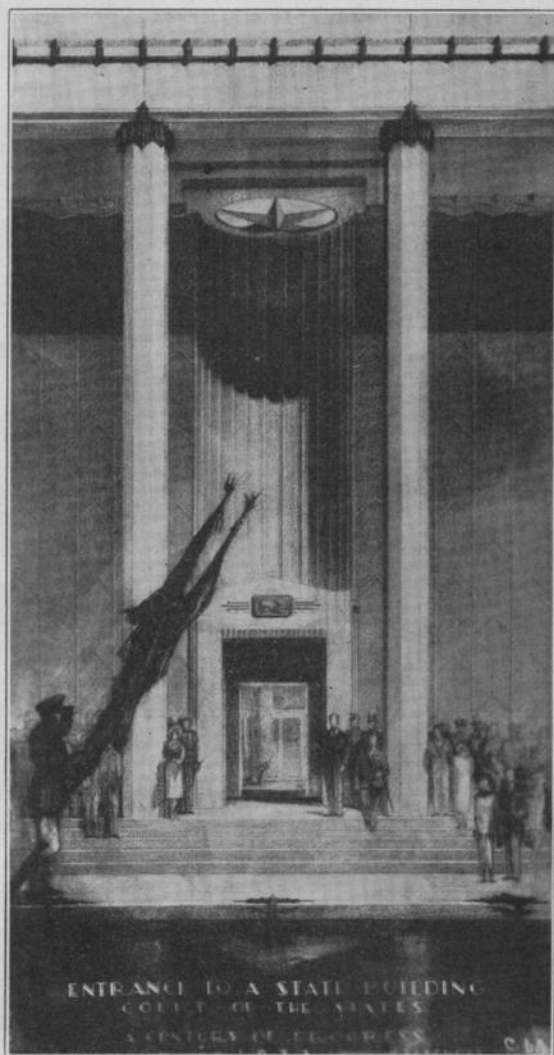

In case a foreign government desires to make an exhibit of its own, the necessary ground will be placed at their disposal without any charge. No difficulty is anticipated in finding a sufficient area for the use of any government desiring to participate. An area having been allotted, the sewers, water connections, power and light connections, etc., will be brought to the boundaries of the area so that it remains only for the participating government to extend these services to whatever buildings or structures they may elect to erect.

Should a participating government prefer to erect a national pavilion, such as has been customary in the past, they will be more than welcomed on those terms. We have taken the liberty of suggesting, however, that a more advantageous form of participation would be an exhibit illustrating the life of the people, such, for example, as a replica of typical buildings such as are found in the cities and towns of the country concerned. Our idea is that this would be a suitable setting in which the products of the arts and handicrafts of the country might be exhibited, in which the attractions of the country for tourists might be exhibited and in which the participating government might make such other exhibits as they might desire, showing their activities directed towards the welfare of their people. An exhibit of this sort is much more nearly in accord with the fundamental philosophy of this Exposition than has been the case with many national pavilions erected in the past.

Features which might be included in such an exhibit are, national theatrical performances and other entertainments of a similar nature; a typical national restaurant; then the wonderfully artistic products which your people make could well be displayed in a setting typical of the country itself.

In case a participating nation decides to adopt this plan, the use of the space within their own buildings is entirely at their own disposal. If they let concessions to their merchants and others for the display of the national handicrafts and domestic arts, any revenue resulting therefrom will accrue to the government itself. The same would be true of any concessions for restaurants, theatrical entertainments, etc. In short, the Century of Progress Exposition would derive no revenue whatsoever from any such participation by a foreign government, beyond the additional visitors which such a feature might bring to the Exposition.

In regard to the plan suggested above, past experience in exhibitions has shown that only about one-third of the ground taken up as a site is actually covered by buildings, the remainder being given up to landscaping, roads, courtyards, etc. Taking an acre site as a basis, it is estimated that the cost would come to approximately \$85,000. This allows for two-story buildings 30 feet high of one facade. The second story would be unfinished, and not intended for exhibition purposes, but could be used as storerooms. The estimated cost includes landscap-

Architect's study of facade of portal in proposed Hall of States at Chicago's 1933 Century of Progress Exposition. Each state and territory is to be represented by its own portal, leading to its own particular exhibit.

ing, roads, connecting to services such as water, light, power, etc., which will be brought up to a corner of the plot allotted, plumbing, indoor finish to receive decoration for one story.

Our Congress has already passed a law admitting articles intended for exhibit purposes only free of charge. Of course, if at the close of the Exposition such articles are sold, the regular duty would have to be paid at that time. If orders are taken for the delivery of articles similar to those exhibited, arrangements could be made for handling this business through local merchants or otherwise, but of course the duty on such articles would have to be paid as in the regular course of business.

In case any foreign government participates, no one will be permitted to set up exhibits or to secure concessions with a view to selling different merchandise alleged to come from the country concerned, without the approval of the participating government. Requirement to this effect is contained in the recent convention relative to world's fairs which was recently ratified in Paris, but wholly apart from that, and before the convention was ratified, the management of the Century of Progress had determined that the course above outlined should be so pursued so that in the event of your country deciding to participate and to utilize some of its space to permit your people to show the products of their handicrafts, you will not be subjected to any irresponsible competition.

Additional legislation will be introduced at the next session of Congress, which will protect foreign

exhibitors in such matters as patents, copyrights, patterns, etc., and in view of existing precedents, we are confident that this legislation will be passed as a matter of course.

So far as location within the Exposition grounds is concerned, we believe that if other nations decide to participate in the manner indicated, the general location should be at the beginning of that part of the Exposition which is devoted to subjects of more than ordinary human interest, that is to say, our exhibits in social science and welfare, model housing, etc., all of which will be in the vicinity of old Fort Dearborn, which we have already erected on the shores of the lake at a point south of Twenty-third Street. In order to insure the largest possible attendance for any exhibits made by foreign governments, we believe that the best place to locate such exhibits is in this part of the grounds and to so arrange them that the people who are on the way to see our own exhibits on social welfare, etc., as well as those who are bent on recreation and nothing else, will all have to pass through these foreign exhibits on the way to these other objects in which they are primarily interested. From our point of view, and our estimate of our own people who will constitute the bulk of the visitors, it seems to us that the advantages which may accrue to a foreign government are:

1) The creation of a better understanding and a more widespread good will between the people concerned and our people.

2) The exploitation of the attractiveness of the foreign country for tourists will undoubtedly increase the number of Americans visiting the country concerned, which is not only financially advantageous to the people of the said country, but also

tends to promote a more complete feeling of fellowship and good will.

3) By utilizing the space for features such as restaurants and entertainments of a national character and also having a display of the domestic arts and handicrafts of the participating country, there is a possibility of securing a direct financial return probably equal to the cost of participation.

If all of these objects can be attained, in addition to that of cooperating with us in exhibiting to the entire human race the story of progress during the last hundred years, it seems to us that the results would be altogether satisfactory.

In case your country should decide to participate in any form calling for the erection of any building, if our Department of Works could be furnished with drawings of a few typical buildings, they will be glad to find out for you what the cost of such building would be in this country, and they will then cooperate with you in every possible way to get the work done at the very lowest possible cost.

Rules and Regulations

Rules and Regulations covering all phases of foreign participation are now in course of preparation and will be available, on request, at an early date. These Rules will, among other matters, include information relative to allotment of and charges for space.

COMMERCIAL CLUBS: Chicago Heights Chamber of Commerce; W. G. Bonvouloir, secretary.

HOTELS: Thomas, American & European plan; Victoria, European plan.

CHURCHES: 11 Protestant; 6 Roman Catholic; 2 Jewish; 4 Colored.

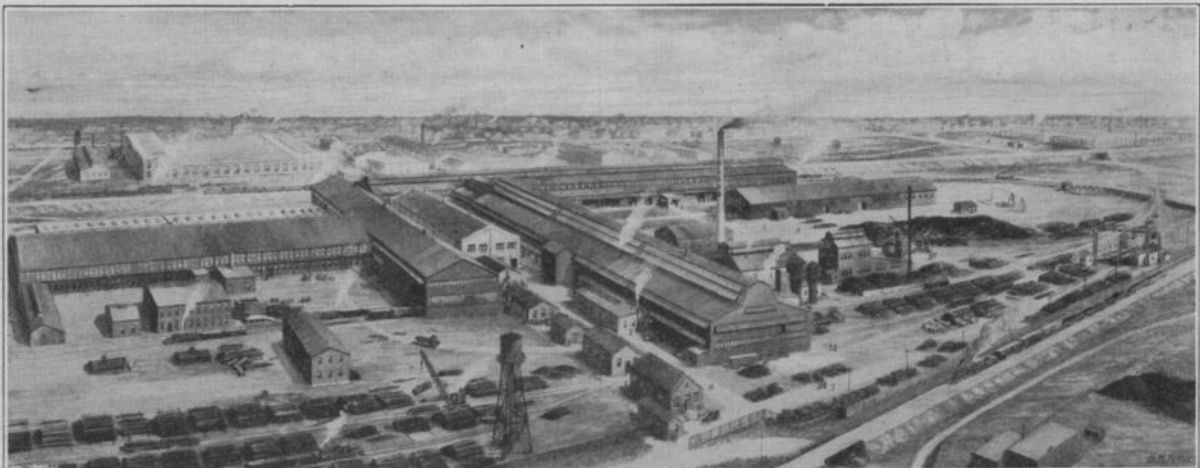

MUNICIPAL BUILDINGS: Post Office; Public Library; City Hall.

SURROUNDING COUNTRY: Rolling; sandy loam, clay subsoil. Price of land variable. Principal crops raised are corn, wheat and oats.

RAW MATERIALS: Clay, developed.

SPECIAL INDUCEMENTS: Exceptional market and transportation facilities.

INDUSTRIES NEEDED: Manufacturing.

Plant of the Inland Steel Co., Chicago Heights, Ill.

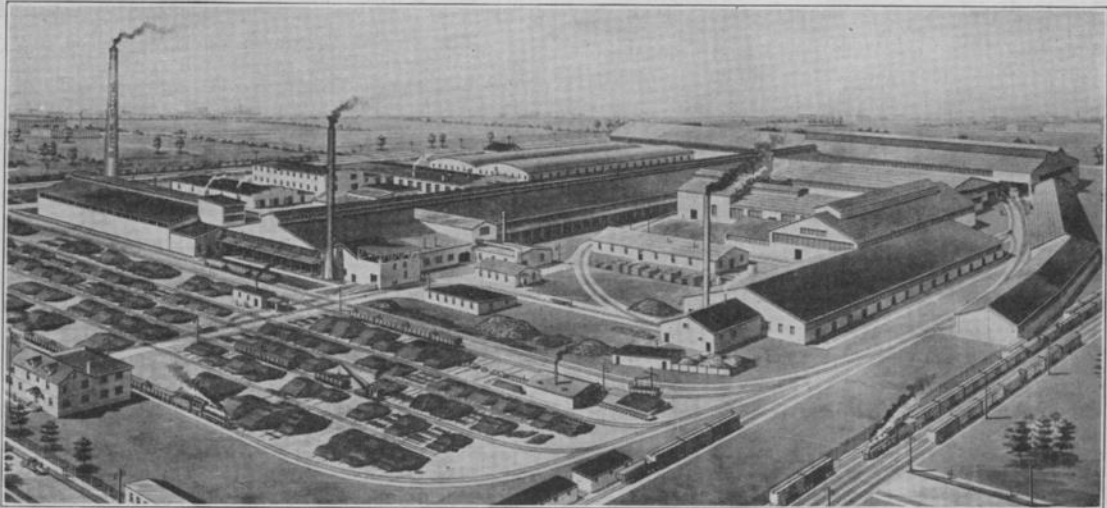

CHICAGO HEIGHTS, ILL.

Combining the attractive advantages of both an industrial and residential district Chicago Heights forms a veritable southern gateway to the Chicago area. Although located only 27 miles from the heart of the Chicago loop, it is an entirely independent city separated from the extreme southern boundaries of the world's fifth city by attractive residential settlements, golf courses and forest preserves.

Located on the two famous transcontinental highways, the Dixie and Lincoln highways, the city has been advertised as the Crossroads of America.

fame to Chicago Heights as a manufacturing center. In fact the magnitude of its industrial side has so impressed those not entirely familiar with the city that many have naturally overlooked the extent and potentialities of residential sections where homes, that compare favorably with those in many of Chicago's fine suburbs, are enhanced by beautiful natural surroundings.

The attractiveness of the city as a residential center is emphasized by adjacent forest preserves, an extensive system of parks and playgrounds, numerous golf courses, the two famous horse racing establishments—Lincoln Fields and Washington

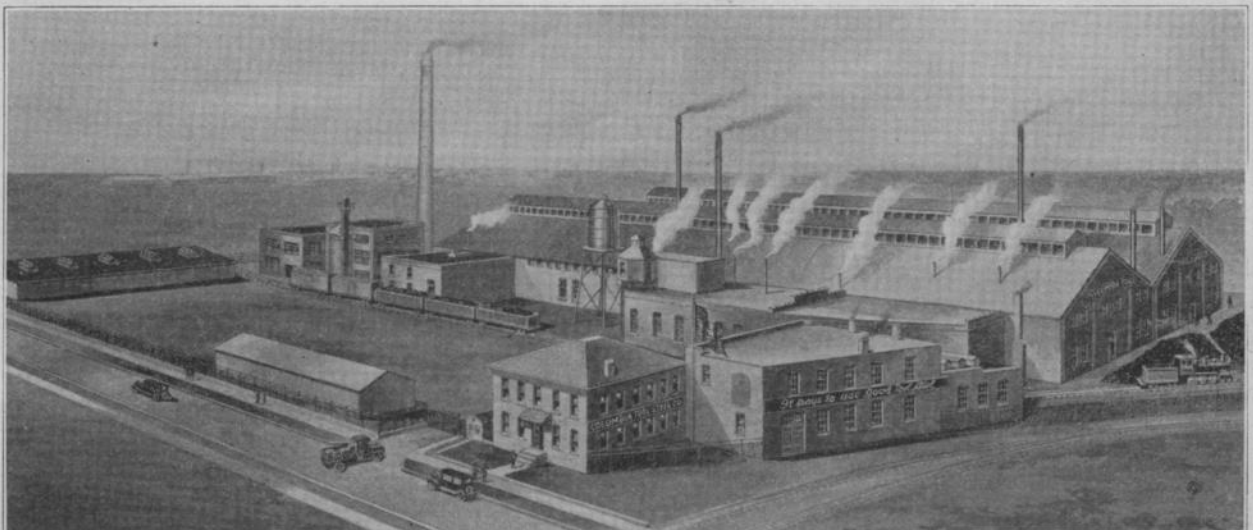

Plant of the Calumet Steel Co., Chicago Heights, Ill.

Originally it was a settlement on the old Vincennes Trail and at its present southern extremity was located an Indian trading post where the Redman traveled back and forth over the historic Sauk Trail. Originally known as Thorn Grove, the city's early history is rich in the lore created by the sturdy pioneers who settled the middle west. It was incorporated as a city in 1891 and its early development was largely due to the exploitation of the Chicago Heights Land Association of which the late Charles H. Wacker, was president.

The products of its 63 industries have brought

Park and numerous other recreational facilities advantageous to the modern community. Mary H. McElowney Park, comprising six acres of wooded, gently rolling land along Thorn Creek, which flows through the heart of the residential districts is supervised by the city. The Chicago Heights Park Board has jurisdiction over three well equipped playgrounds and two unimproved as yet playground sites. The Chicago Heights playground system is considered to be one of the best in the Chicago area and through trained supervisors offers regulated play hours for hundreds of Chicago Heights children.

Columbia Tool Steel Co., Chicago Heights, Ill.

CHICAGO HEIGHTS, ILL.—Continued

Some of the best timber lands in the Cook County Forest Preserve system are within or adjacent to the boundaries of the city. The preserves are easily accessible to every Chicago Heights resident and only a short distance from the city's southern limits is located the newly completed artificial lake built by the Cook County Board.

Within a six-mile radius of the city hall are located more than a dozen country clubs, including, in addition to several daily fee courses, the Chicago Heights Country Club, Olympia Fields, Flossmoor, Lincolnshire, Ravislloe, and Idlewild.

Chicago Heights has a school system of high standing. There are six elementary schools housed in modern buildings. Construction is well under way on a new \$1,000,000 building for Bloom Township High School. There are seven parochial schools.

Retail business in Chicago Heights of nearly \$12,000,000 was reported in the recent United States Government census. There are 359 stores employing nearly 1,000 men and women with an annual payroll of \$1,350,000. A well organized Chamber of Commerce with a retail merchants division and credit bureau serves the business interests of the city. In addition there are several commercial or service clubs including Rotary, Kiwanis, and Lions.

Chicago Heights has numerous churches, fraternities and clubs which form the nucleus of many religious and social activities. There are 11 Protestant churches, six Roman Catholic, two Jewish congregations, four colored churches. Practically every nationally known fraternity is represented in the city and several own their buildings. The Chicago Heights American Legion post is active in the affairs of the community and is at present represented in the American Legion, Department of Illinois, by Commander Arthur G. Poorman. An active chapter of the Izaak Walton League has been established and one of its members, Dr. P. R. Blodgett is president of the Illinois Division of the League. The Chicago Heights Women's Club is a factor in many community activities and has a garden department that had much to do with increasing the attractiveness of the city.

As an industrial center the city is particularly favored from the standpoint of motor, rail, air and water facilities. The main line of the Chicago and Eastern Illinois Railroad passes through the heart of the business district and connects with the Chicago Heights Terminal Transfer Railroad, a Chicago and Eastern Illinois Railroad property. Other railroads serving the city include: the Michigan Central, the E. J. & E., and the Chicago, Milwaukee and St. Paul. Chicago switching district freight rates pre-

vail. Electrified I. C. Suburban service from 211th Street is available through regular bus connections. Concrete highways, including many of the principal arterial routes, bisect the city in all directions. The Ford Airport is located just northeast of the city limits. Direct connection, to the entire Calumet industrial area through Chicago Heights, with the Illinois waterway junction at Joliet will be available over two railroads. Chicago Heights industries at the time of the last industrial census had a payroll of nearly \$8,000,000 and had an annual output of all parts of the world of more than \$44,000,000. The industrial interests of the city are served by the Chicago Heights Manufacturers' Association which operates a traffic bureau. (Other facts may interest the listener.)

The City Government operates under the Commission form with a mayor and four commissioners. The police department is well equipped and manned by a force of 12 patrolmen, six officers and a chief. The fire department is well equipped and only recently a large aerial ladder was added to the list of modern vehicles.

There are 56.6 miles of paved streets covering an area five square miles.

The St. James hospital has 125 beds in a new building six stories in height.

A well organized Boy Scout organization under a trained executive serves the youth of the city. The organization maintains a summer camp on its own property near Buchanan, Michigan. The Girl Scouts, too, have a regularly employed supervisor.

There are two newspapers, the Chicago Heights Star and the Standard.

A free public library contains more than 16,000 volumes and each year many new volumes are added.

There are good hotel facilities with excellent dining room and restaurant service.

Chicago Heights, it will be shown from these facts is a good place in which to live and work. Further information regarding this growing community will be gladly furnished by addressing the Chicago Heights Chamber of Commerce.

Industrial Census—1930

DANVILLE, ILLINOIS

Danville, the county seat of Vermilion County, Illinois, is located in the eastern part of the state, four miles from the Indiana state line. It is 124.4 miles due south of Chicago, and 260.4 miles (by rail) north of Cairo. It is 187.1 miles northeast of St. Louis and 85 miles west of Indianapolis, Ind. It is in the center of the corn belt and in the important coal field known in the industrial world as the "Danville" district.

The site of Danville—then occupied by a village of Piankeshaw Indians—was first settled by Dan Beckwith, in 1824, whose trading post was situated within the limits of the present Ellsworth park. When the County of Vermilion was formed in 1826 he and Guy Smith donated the eighty acres of land required for the "Seat of Justice" and the town was christened "Danville" in his honor. It came into official being April 10, 1827, was incorporated as a city in 1869, and organized under the Alder-

manic form of government. This continued until February, 1927, when by a large majority the Commission Form of Government was adopted. The details of this form are now being worked out.

Buying Power of Danville

The wide diversity of the industries of Danville, together with its situation in the heart of the Illinois-Indiana black dirt farming belt, enables the City, as a whole, to prosper, even when one or more of the chief industries are in a business depression. A real hub in the network of hard roads which has made Danville the trading point for the dweller of the towns and farms within a radius of fifty miles is another factor for stabilization of business conditions.

The purchasing power of the people of Danville is greater than that of many cities of equal or greater population because of the distribution of certain payrolls by institutions not usually located in cities of this size. Danville is an important railroad center, with a large number of employees. In normal times the mine operators' payroll is large. The public utilities also employ a large number of people. The Hegeler Smelter and the Western Brick Company, the largest in the United States, are a big factor. The headquarters of the U. S. court for the Eastern District of Illinois, with the various offices located here, adds materially, while the Danville Branch of the National Soldiers' Home, with its monthly payroll of \$65,000 in pensions to its members and its monthly payroll to the 422 employees is a year-round source of joy to our business houses.

By combining the above payrolls with the industrial payroll of Danville, the cause of the City's retail business prosperity is apparent.

Concentrated Markets

The fact that more than 21,000,000 people are within 300 miles of Danville is an indication that the City is the logical center of a great potential market. Almost one-fifth of the Nation's buying power

is within less than twenty-four hour freight service of Danville. Chicago, St. Louis, Kansas City, Indianapolis, Cleveland, Cincinnati, Detroit, Milwaukee and Louisville, with a combined population of 6,997,010, are all within thirty-six hour freight service of Danville. These large cities offer one of the world's largest markets for a great variety of manufactured goods.

Manufacturers who are producing products for the principal agricultural sections of the United States would be nearer the center of their potential markets if located in Danville. Consequently, with transportation charges on their finished product at a minimum, Danville offers a decided advantage over many other cities. Agricultural products are the raw material used by a great many industries, and

DANVILLE, ILL.—Continued

Danville's location should be given serious consideration from this standpoint.

National Distribution

A nationally advertised and consumed article can be marketed for the lowest cost, other things being equal, at the center of population. The aggregate freight haul to the ultimate consumer will be less than from any other point. This is an important factor, since the freight rate on the finished product is higher than on the raw material or semi-finished product.

The present center of population of the United States is near the Illinois-Indiana state line, and within 50 miles of Danville. This economic center is gradually moving westward and will be in Illinois for many years. Danville, therefore, because of its nearness to the center of population, offers a desirable location for industries producing nationally consumed articles.

The excellent railroad facilities at Danville makes it possible to ship goods in any direction, with direct freight service to all the principal markets. A total of eleven freight carrying lines radiate in every direction from the City. These lines are operated by six companies.

Danville is in the center of the great Mississippi Valley, a production zone without which the United States could hardly exist.

Industries of Danville

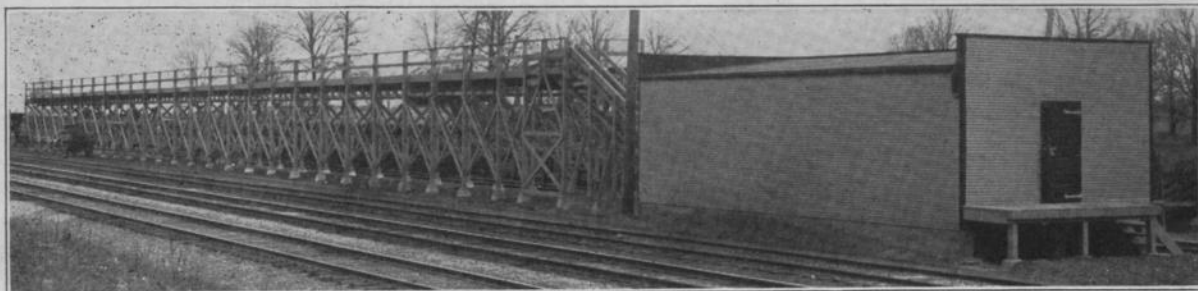

Danville is essentially an important center of trade and industry. The City has 92 industries of a very diversified character. They are so diversified that an ideal employment situation exists to the advantage of the established concerns and the commercial activity of the community, as well as being of vital interest to new industries considering this City as a location.

The conditions have produced an excellent supply of labor adaptable to and experienced in nearly any type of manufacturing. More than 4,700 people are engaged as wage earners in the industries of Danville, exclusive of the coal mines.

Transportation

Danville, due to its unusual location in the transportation world, with the resulting low freight

rates, has much to offer as a potential industrial center for industries catering to the immense buying power of the great Middle West. Six rail lines, comprising the Big Four, the Wabash, C. & E. I., New York Central, C., T. H. & S. E. and the Illinois Traction System, lead to and from Danville in every direction, connect with all the leading Transportation Arteries of the United States, and bring the producing fields of raw materials and the consuming centers of finished products within easy access.

per cent group rates, as against the higher rates applying to Decatur, East and West bound; 110 per cent; Peoria, 110 per cent; Champaign, 110 per cent; St. Louis, 117 per cent; Paris, 103 per cent; Bloomington, 110 per cent; Springfield, East bound, 117 per cent; West bound, 113 per cent.

To the South and Southeast, with rare exceptions, the rates are in favor of Danville.

To and from the Southwest Danville takes the same rates as Chicago.

To and from the Pacific Coast and a consider-

Allith Prouty Co. and Danville Malleable Iron Co., Danville, Ill.

The freight rate situation is worthy of serious consideration. Compared with Chicago—where higher labor costs, higher living expenses and higher costs of doing business discourages new industries—Danville, almost without exception, offers a marked decrease in living and in business overhead, with freight rates equal or lower than those of the metropolis.

Danville and Chicago are both located in what is known as the Central Freight Association territory. To and from points beyond that territory Danville generally enjoys equal rates with Chicago or lower.

To and from New England and Eastern Trunk Line Territories Danville takes Chicago basis of 100

able portion of the Northwest Danville takes the same rates as Chicago, Decatur, Peoria, Springfield, Champaign, Paris and Bloomington. These rates are lower than Terre Haute, Crawfordsville and Lafayette, Ind., whereas, to the East, Danville rates to and from the New England and Eastern Trunk Line territories are no higher than these Indiana cities.

To and from the North and the immediate Northwest rates do not exceed the St. Louis group.

Distribution by Rail

No city in America possesses advantages superior to Danville as a distribution center offering

Sugar Creek Creamery, Danville, Ill.

DANVILLE, ILLINOIS—Continued

cheap comprehensive means of reaching by rail all the population of the country.

It is in the heart of the country's rail transportation system.

It is served by rail routes diverging to all points of the compass with short line mileage to St. Louis, Kansas City and Chicago, the three greatest railroad centers in the world, with fast trains timed to match the arrival and departure of most of the great trans-continental and other long distance trains having terminals in those centers. For points East there are fast trains making close connections at Indianapolis, Buffalo and Toledo. In other words, the service between Danville and distant points reached through these junction points may be said to constitute continuous movement.

EAST ST. LOUIS

East St. Louis is a city of 74,315 population within its limits and over 25,000 in the territory immediately adjacent. St. Clair County's population according to the census just completed, is 133,000.

East St. Louis, while largely devoted to industry, has many beautiful homes, a splendid park system, a first-class school system and all the other elements which go to make up a thriving mid-western industrial community.

Transportation

1. East St. Louis is the second largest transportation center in America—surpassed by Chicago only.

2. Twenty-three railroads serve East St. Louis. Here is the list: Chicago & Eastern Illinois; Alton and Southern (Terminal); Baltimore & Ohio; Big Four; Chicago & Alton; Chicago, Burlington & Quincy; East St. Louis, Chester & Western; East St. Louis Junction Ry. (Terminal); East St. Louis & Suburban (electric); Illinois Central; Litchfield & Madison; Louisville & Nashville; Missouri Pacific; Mobile & Ohio; Pennsylvania; Southern; St. Louis & Ohio River; St. Louis & Southwestern; St. Louis &

EAST ST. LOUIS, ILL.—Continued

O'Fallon; St. Louis, Troy & Eastern; Terminal Railroad Association; Toledo, St. Louis & Southwestern, Wabash.

3. East St. Louis is the Western Terminus of the following roads: Big Four; C. & E. I.; Wabash; Illinois Central; Toledo, St. Louis & Western; Pennsylvania; B. & O.; L. & N.; Southern; Mobile & Ohio.

4. East St. Louis has 85 team tracks with capacity for 1285 cars.

5. The railroads employ in East St. Louis 8,415 people with annual payrolls of \$13,250,000.

6. Each month East St. Louis terminals handle over 500,000 freight cars. There are 223 freight trains in and out daily. Passengers are cared for by 77 daily trains.

7. The Railroads have now perfected plans for the expenditure of \$4,000,000 in East St. Louis for the improvement of freight and passenger service. Of this amount, \$750,000 will be spent on a new Union Station and the remainder on rerouting of tracks, bridge approaches, etc.

River Transportation

In addition to railway transportation East St. Louis is served by the Mississippi-Warrior Service with adequate terminals.

Aviation

Parks Airport—East St. Louis has long been noted as an aviation center and the home of Parks Airport and Air College situated only three miles from the business district. This air college has prepared, and is still preparing, more men for aviation than any similar institution in the world. Parks Airport is a well-equipped landing field of 100 acres receiving heavy patronage because of its close proximity to both East St. Louis and St. Louis.

Curtis-Steinberg Field—June 28 and 29, 1930, the Curtis-Steinberg Field, the home of Curtis-Wright Flying Service, was formally dedicated. This field consists of 569 acres perfectly drained and equipped with hangars, repair shops, concrete runways, etc. It is one of the finest fields in the Middle West and located only 15 minutes from downtown East St. Louis or St. Louis, Missouri.

Water Supply

East St. Louis secures its water supply through the East St. Louis and Interurban Water Company several miles north of the city. This water is sterilized, softened and filtered before being pumped into the mains. The capacity of the plant is 44,000,000 gallons per day.

In addition to the regular city water, East St. Louis territory has an unlimited supply of water running through the gravel which underlies the city at a depth of only 50 or 60 feet. By sinking wells into this gravel, industrial plants are able to secure large quantities of water for cooling and other industrial purposes at very low cost.

Power and Fuel

East St. Louis is served by the great Cahokia Power Plant situated just below the free bridge on the east side of the Mississippi. This plant insures to manufacturers an inexhaustible supply of electric energy available at all times.

In St. Clair County, in close proximity to East St. Louis, are located coal mines capable of almost unlimited production. This coal is high volatile, free burning, long flame, bituminous, and is available in a large variety of sizes for steam and domestic use.

Natural Gas

Recently a pipe line has been completed from the Louisiana fields bringing an abundant supply of natural gas for industrial uses to East St. Louis. This new service has already attracted, to this locality, industries requiring large supplies of natural gas at low rates.

Labor

The fact that East St. Louis is in the midst of a great industrial area attracts high class labor to this community. Close at hand there are hundreds of concerns employing skilled labor. There is a population of 1,250,000 people within a radius of 25 miles to draw from for labor supply. All industries are operated on the American Plan, open shop.

East St. Louis Industrial Plants

The value of the annual products of industries located within the limits of East St. Louis amounts to over \$81,000,000 annually. In the city proper and the industrial area immediately adjacent, the annual value of the industrial output reaches more than \$175,000,000 and in the entire county, nearly \$200,-

000,000. These figures convey some idea of the magnitude of this city's industrial development. Because of its central location, unexcelled transportation facilities, unlimited supply of electrical energy and abundance of skilled labor, the present decade will show an increase in production far in excess of any previous period of similar length.

New Industries

Notwithstanding the recent business depression, East St. Louis has continued to take on new industries. During the past few months the following nationally known concerns have selected sites for plants in this city: Wailes-Dove-Herminston Corporation (bituminous enamel), Phillips Petroleum Company (large refinery), Philip Carey Mfg. Co. (insulating material), Auto Stove Works, Eagle Foundry Company.

Banking Facilities

The resources of the four banks and two trust companies, serving the East St. Louis area, total nearly \$40,000,000 with deposits of \$35,000,000. There are four building and loan associations with total assets of \$1,900,000.

Conclusion

This is not intended as a complete picture of East St. Louis but it touches some of the high spots. If interested, write the East St. Louis Chamber of Commerce, 805 Spivey Building, for further information.

ELLIS, VERMILION COUNTY, ILLINOIS

Population 35. Not incorporated. County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois.

TELEPHONE SERVICE: Local and long distance; Potomac Telephone Co., Potomac, Illinois.

SCHOOLS: 1 public grammar.

CHURCHES: 1 Methodist.

SURROUNDING COUNTRY: Level; sandy loam. Price of improved land per acre, \$150.00; unimproved, \$100.00. Principal crops raised are corn, oats, clover, soy beans and hay.

FAIRLAND, DOUGLAS COUNTY, ILLINOIS

Population 127. Not incorporated. County seat, Tuscola, Illinois

RAILROAD: Chicago & Eastern Illinois.

ELECTRIC LIGHT PLANT: Service from Central Illinois Public Service, Mattoon, Illinois.

TELEPHONE SERVICE: Local; Illinois Commercial Telephone Co., Murphysboro, Illinois.

SCHOOLS: 1 public grammar.

CHURCHES: 1 Methodist.

MUNICIPAL BUILDINGS: Post Office, rented, \$4.00 per month.

SURROUNDING COUNTRY: Level; black soil. Price of improved land per acre, \$200.00; unimproved, \$160.00. Principal crops raised are wheat, corn, oats and soy beans.

FAYVILLE, ALEXANDER COUNTY, ILLINOIS

Population 50. Not incorporated. County seat, Cairo, Illinois

RAILROADS: Chicago & Eastern Illinois; Missouri Pacific Lines.

RIVER: Mississippi, navigable.

TELEPHONE SERVICE: Local and long distance; Southeast Missouri Telephone Co., Cape Girardeau, Missouri.

SCHOOLS: 1 public grammar.

SURROUNDING COUNTRY: Hilly; gray and yellow sandy loam. Price of improved land per acre, \$45.00; unimproved, \$10.00. Principal crops raised are wheat, corn, vegetables, livestock and poultry.

RAW MATERIALS: Pottery clay, silica, ochre, moulding sand; developed in a small way; sufficient in quantity to warrant development.

SPECIAL INDUCEMENTS: Sites; good transportation.

INDUSTRIES NEEDED: Pottery or silica plant.

SPECIAL INDUCEMENTS: Site, good transportation.

INDUSTRIES NEEDED: Canning factory.

BUSINESS AND PROFESSIONAL OPENINGS: Doctor.

GRANITE CITY, ILL.

Granite is the name of a city; it is also the generic for a district embracing 4 incorporated places and one unincorporated village, constituting, with adjacent territory, the southwest corner of Madison County, Illinois, lying opposite the north part of the City of St. Louis, Missouri. Granite City's population by the 1930 census was 25,130, an increase since 1920 of 70 per cent; of the district, 42,500, a gain of 63 per cent; thus making it one of the most rapidly developing industrial communities in America. The 40-odd industries of the district employ on the average 15,000 workers who receive in annual pay around \$20,000,000.

Iron and steel major, whence the district is oft referred to as "The Pittsburgh of the Mid-West," and no less than Charley Schwab once declared it was destined to become the greatest such center in America, due to its outstanding asset of centrality, its splendid transportation facilities by all means, close proximity to exhaustless Illinois coal and handiness to the ores of Missouri and Minnesota. It also enjoys natural gas and is supplied by one of the largest power pools in the world. Nearby St. Louis affords virtually an unlimited labor supply and supplemental services to meet every requirement. The sole coker of Illinois coal and only producer of pig iron in the Mississippi Valley is located at Granite.

The town owes its origin and name to the Niedringhauses, who, back in the early nineties, located the first factory here, for the manufacture of granite ware. This plant is now a unit of the National Enameling and Stamping Company, leading producer

GRANITE CITY, ILL.—Continued

of sheet metal ware, both enamelled and galvanized. An offshoot, the Granite City Steel Company, has become one of the largest independent producers of sheets and tinplate. There are several steel foundries, the best known being the Commonwealth Steel, now a division of General Steel Castings Corporation, the only company in the world capable of making locomotive beds and car frames in one piece of cast steel.

Building materials and food products are other important industries in the Granite City District.

Eight trunk line railroads reach the St. Louis terminal through the Granite City District and through belts it has ready connections with the other eleven trunks and twelve short lines focusing at St. Louis. Among the serving railroads is the Chicago & Eastern Illinois.

Full information regarding the facilities and advantages of the Granite City District will gladly be furnished by the Industrial Bureau of the Granite City District, Inc., to whom we are indebted for this brief sketch.

Facts About Granite City Furnished by the Industrial Bureau of the Granite City District

Granite City takes its name from granite ware, the first product to be made in the vicinity.

Granite City was only a corn field at the time of the Chicago World's Fair (1893); incorporated in 1896, it has grown to be a city of 25,130 (1930 census), an increase in the last decade of 70 per cent. With adjacent urban areas, the population is around 43,000.

Granite City is located across the Mississippi River from St. Louis, in Madison County, Illinois. Madison County ranks second in manufacturers and third in population in the State. Illinois is third in the nation in both population and manufactures, among the first also in mineral production and agriculture.

Granite City is in the St. Louis switching zone, hence has the use of all 29 rail outlets making this the second greatest rail center in America; 12 of these lines traverse the Granite City District. The hub also of air, water and highways—one of the nation's principal crossroads of trade and travel.

Fifty million people—fifty billion dollars buying power—within 500 mile radius, overnight by train, 5 hours by air; very heart of the world's richest country, accounting for upwards 50 per cent of its manufactured and 70 per cent of its agricultural products.

Five million people within 150 mile circle, "the 49th State," claimed to excel in wealth and variety of natural resources any like area on earth; 1,300,000 in the "close-in," or Metropolitan area, with native element heavily predominant; a premier local market.

Principal Gateway to the Southwest, most rapidly developing section in the United States.

Freight rates "break" at the Mississippi River, giving the shipper in this area special advantages in serving his market both East and West; water competition has made for a very favorable rate structure.

Topography on east (Illinois) side is ideally suited for industry; land values are still relatively low; and there is room for a very large additional development.

Water—filtered and treated river water generally available through district; well water (100—130 ft.) furnishes a good secondary source, supply seems unlimited. Plants near the river have that as a third source.

Fuel—operating mines in the great Illinois coal fields within teaming distance. Fuel oil available from nearby Wood River refineries. Coke and gas from local by-products ovens. Natural gas also available and is used by many of the plants. Most of these fuels are cheaper on the east side than across the river; coal 25c less.

Electric energy—serving utility is part of the greatest power pool in the United States; rates for industry compare with lowest anywhere.

Taxes in the district—as actually assessed against industry—are relatively low, especially for new establishments. The state law, moreover, is friendly, thanks largely to the vigilance of a powerful manufacturers' association. Insurance classification favorable, due to ample water supply and efficient community protection service.

Granite City is site of only blast furnaces and by-product coke ovens (coking Illinois coal) in the Mississippi Valley proper.

Iron and steel industry majors, but non-ferrous metals, building materials and food products are

also important. Over 100 different products are manufactured in the 40-odd plants of the district, employing normally 15,000 workers with an annual payroll of \$20,000,000; products \$30,000,000.

Industries are needed to utilize the district's surplus female and less able-bodied labor, and to give greater diversity.

Granite City's retail volume in 1929, according to the United States Census of Distribution, exceeded \$11,000,000; estimate for district, \$15,000,000. Considered a very good showing in view of proximity—20 minutes by electric or bus—to downtown St. Louis.

Granite City is fully functioning in every way; yet St. Louis is handy to supplement any lacks, enabling the community to offer typical "small town advantages" plus big city conveniences.

GRANT PARK, KANKAKEE COUNTRY, ILLINOIS

Population 468. Incorporated 1883. County seat, Kankakee, Illinois

RAILROAD: Chicago & Eastern Illinois.

SEWERAGE SYSTEM: 5 miles.

ELECTRIC LIGHT PLANT: Service from Northern Illinois Public Service Co.

GAS PLANT: Northern Illinois Public Service Co. is now building a line to Grant Park.

TELEPHONE SERVICE: Local and long distance; Illinois Bell Telephone Co., Springfield, Illinois.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public grammar; 1 public high.

BANK: First National Bank of Grant Park.

NEWSPAPER: Anchor, weekly.

HOTEL: Grant Park, European plan.

CHURCHES: 1 Methodist; 1 Evangelical.

MUNICIPAL BUILDINGS: Post Office, rented, \$30.00 per month.

SURROUNDING COUNTRY: Rolling; black soil. Price of improved land per acre, \$125.00; unimproved, \$200.00. Principal crops raised are wheat, corn and oats.

GRAPE CREEK, VERMILION COUNTY, ILLINOIS

Population 300. Not incorporated. County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois.

RIVER: Vermilion, not navigable.

TELEPHONE SERVICE: Local and long distance; Illinois Telephone Co., Springfield, Illinois.

SCHOOLS: 1 public grammar.

CHURCHES: 1 Baptist; 1 Christian.

SURROUNDING COUNTRY: Hilly; sandy loam. Price of improved land per acre, \$100.00; unimproved, \$50.00. Principal crops raised are corn, oats and wheat.

RAW MATERIALS: Coal, developed.

INDUSTRIES NEEDED: Coal mines.

GRINNELL (BLIND SIDING), MASSAC COUNTY, ILLINOIS

Population 20. Not incorporated. County seat, Metropolis, Illinois

RAILROAD: Chicago & Eastern Illinois.

SURROUNDING COUNTRY: Yellow and black silt loam. Price of improved land per acre, \$35.00; unimproved, \$15.00. Principal crops raised are fruit, live stock and poultry.

HASTINGS, VERMILION COUNTY, ILLINOIS

County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois.

SURROUNDING COUNTRY: Level; black loam. Principal crops raised are corn, oats, wheat and soy beans.

RAW MATERIALS: Coal, sufficient quantity to warrant development.

HENNING, VERMILION COUNTY, ILLINOIS

Population 287. Incorporated 1909. County seat, Danville, Illinois

RAILROADS: Chicago & Eastern Illinois; Illinois Central.

ELECTRIC LIGHT PLANT: Service from Springfield, Illinois.

TELEPHONE SERVICE: Local and long distance; Ohio Valley Utilities Co., Roseville, Illinois.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public grammar; 1 public high.

BANK: Lane Brothers State.

HENNING, ILL.—Continued

CHURCHES: 1 Methodist; 1 Grace Methodist; 1 Christian.

MUNICIPAL BUILDINGS: Post Office, rented, \$15.00 per month.

SURROUNDING COUNTRY: Level; black loam. Price of improved land per acre, \$125.00; unimproved, \$85.00. Principal crops raised are corn, oats, beans and hay.

INDUSTRIES NEEDED: Tile and brick factory.

HENTON, SHELBY COUNTY, ILLINOIS

Population 90. Not incorporated. County seat, Shelbyville, Illinois

RAILROAD: Chicago & Eastern Illinois.

TELEPHONE SERVICE: Local and long distance; Ridge Telephone Co., Westervelt, Illinois.

SCHOOLS: 1 public grammar.

CHURCHES: 1 M. E. Church; 1 Christian.

MUNICIPAL BUILDINGS: Post Office, rented, \$6.00 per month.

SURROUNDING COUNTRY: Level; black loam to east and north. Mostly rolling to south and west. Light clay soil. Price of improved land per acre, \$45.00 to \$70.00; unimproved, \$30.00. Principal crops raised are wheat, oats, corn, soy beans, hay, live stock and poultry.

RAW MATERIALS: Coal; gravel. Both sufficient in quantity to warrant development.

INDUSTRIES NEEDED: Grain elevator.

HICKMAN, IROQUOIS COUNTY, ILLINOIS

County seat, Watseka, Illinois

RAILROAD: Chicago & Eastern Illinois.

SURROUNDING COUNTRY: Level; black loam. Price of improved land per acre, \$140.00; unimproved, \$135.00. Principal crops raised are corn, oats, wheat and sweet corn.

HILLSBORO, MONTGOMERY COUNTY, ILLINOIS

Population 4,433. Incorporated 1855. County seat.

RAILROADS: Chicago & Eastern Illinois; Cleveland, Cincinnati, Chicago & St. Louis; Illinois Terminal.

INTERURBAN LINES: Illinois Terminal; general freight and passenger.

SEWERAGE SYSTEM: 9 miles.

ELECTRIC LIGHT PLANT: Private; Illinois Power & Light Corp.

GAS PLANT: Private; Illinois Power & Light Corp.

WATER WORKS SYSTEM: Municipal.

STREETS: Paved 5 miles with brick and asphalt.

TELEPHONE SERVICE: Local and long distance; Illinois Consolidated Telephone Co., Mattoon, Illinois.

FIRE DEPARTMENT: Volunteers.

NEWSPAPER: Hoopeston Chronicle-Herald, daily.

OPERA HOUSE: McFerren Opera House, capacity 1,500.

MOVING PICTURES: Lorraine Theatre, capacity 800.

COMMERCIAL CLUB: Chamber of Commerce, G. H. Finch, secretary.

HOTELS: Cunningham, European plan; Hoopeston, European plan.

CHURCHES: 1 First Church of Christ; 1 Methodist; 1 Catholic; 1 Universalist; 1 Presbyterian; 1 United Presbyterian; 1 Baptist; 1 Church of God; 1 Nazarene, 1 Free Methodist.

SURROUNDING COUNTRY: Level; black loam. Price of improved land per acre, \$150.00. Principal crops raised are corn, oats and hay.

SPECIAL INDUCEMENTS: City will pay moving expenses for small industries; will furnish site for large industries; if necessary, will build new buildings, to be paid for by industry in ten years without interest.

INDUSTRIES NEEDED: Various manufacturing.

BUSINESS AND PROFESSIONAL OPENINGS: Poultry packing plant.

HOPKINS PARK, KANKAKEE COUNTY, ILLINOIS
Population 35. Not incorporated. County seat, Kankakee, Illinois

RAILROAD: Chicago & Eastern Illinois.

SCHOOLS: 1 white public grammar; 1 colored public grammar.

CHURCHES: 1 Baptist.

SURROUNDING COUNTRY: Level to rolling; light sandy loam. Price of improved land per acre, \$65.00; unimproved, \$20.00. Principal crops raised are wheat, corn and oats.

HUDGENS (BLIND SIDING), JOHNSON COUNTY, ILLINOIS

Population 12. Not incorporated. County seat, Vienna, Illinois

SURROUNDING COUNTRY: Hilly; yellow silt loam. Price of improved land, \$35.00; unimproved, \$20.00. Principal crops raised are oats, corn and hay.

INA, JEFFERSON COUNTY, ILLINOIS

Population 458. Incorporated 1898. County seat, Mt. Vernon, Illinois

RAILROAD: Chicago & Eastern Illinois.

ELECTRIC LIGHT PLANT: Service from Cahokia, or Grand Tower, Illinois.

TELEPHONE SERVICE: Local and long distance; Tri-County Telephone Corp., Waltonville, Illinois.

SCHOOLS: 1 public grammar; 1 public high.

BANKS: Ina State Bank.

NEWSPAPER: Ina Observer, weekly.

CHURCHES: 1 General Baptist; 1 Methodist; 1 Presbyterian; 1 Freewill Baptist.

MUNICIPAL BUILDINGS: Post Office, rented, \$10.00 per month.

SURROUNDING COUNTRY: Level; soil, gray silt loam. Price of improved land per acre, \$25.00; unimproved, \$15.00. Principal crops raised are corn, wheat, oats, hay, live stock and poultry.

RAW MATERIALS: Coal.

SPECIAL INDUCEMENTS: Low rent and cheap labor.

INDUSTRIES NEEDED: Small factory of any kind.

BUSINESS AND PROFESSIONAL OPENINGS: Doctor.

INDIANOLA, VERMILION COUNTY, ILLINOIS

Population 300. Incorporated 1881. County seat, Danville, Illinois

RAILROAD: Chicago & Eastern Illinois.

ELECTRIC LIGHT PLANT: Service from Danville, Illinois.

STREETS: Paved 2 miles with rock.

TELEPHONE SERVICE: Local and long distance; Illinois Bell Telephone Co., Springfield, Illinois.

SCHOOLS: 1 public grammar; 1 public high.

SCHOOLS: 2 public grammar; 1 public high; 1 parochial.

NEWSPAPER: Johnston City Progress, weekly.

MOVING PICTURES: Fox-Palace, capacity 1,200; Fox-American, capacity 300.

COMMERCIAL CLUBS: Rotary Club, W. P. Wells, secretary; Lion Club, Ira E. Jones, secretary.

HOTELS: Arlington, European plan; Main, European plan.

CHURCHES: 3 Baptist; 1 Methodist; 1 Christian; 1 Church of God; 1 Church of Christ; 1 Pentecostal; 1 Evangelical.

MUNICIPAL BUILDINGS: City Hall; Post Office, rented, \$150.00 per month.

**Steamer W. J. Jackson,
Joppa, Ill.**

This steamboat is owned and operated by the Chicago and Eastern Illinois Railway. It is used for towing between Paducah, Ky., and Joppa, Ill., also for harbor service at the port of Joppa, in connection with the handling of river traffic of all kinds. This boat performs the same service on the river that a switch engine performs in a railroad yard.

JOHNSTON CITY, ILL.—Continued

SURROUNDING COUNTRY: Rolling to hilly sandy loam. Price of improved land per acre, \$40.00 to \$60.00; unimproved, \$25.00 to \$35.00. Principal crops raised are corn, hay, soy beans, cowpeas, oats, poultry and live stock.

RAW MATERIALS: Coal, developed.

SPECIAL INDUCEMENTS: Abundance of power, fuel, water; excellent transportation, well located sites.

INDUSTRIES NEEDED: Factories using female labor.

BUSINESS AND PROFESSIONAL OPENINGS: Up-to-date ladies' ready-to-wear and dry goods. Bank.

JOPPA, MASSAC COUNTY, ILLINOIS

Population 460. Incorporated 1905. County seat, Metropolis, Ill.

RAILROAD: Chicago & Eastern Illinois.

RIVER: Ohio, navigable.

BOAT LINES OPERATING: Mississippi Valley Barge Line; American Barge Line; Union Barge Line.

ELECTRIC LIGHT PLANT: Service from Grand Tower, Ill.

TELEPHONE SERVICE: Local and long distance; Illinois Commercial Telephone Co., Murphysboro, Ill.

FIRE DEPARTMENT: Volunteers.

SCHOOLS: 1 public grammar; 1 public high.

MOVING PICTURES: Logan Theatre, capacity 200.

HOTELS: Rooming house.

CHURCHES: 1 Methodist; 1 Christian.

MUNICIPAL BUILDINGS: Post Office, rented, \$10.00 per month.

SURROUNDING COUNTRY: Rolling for about 3 miles, then hilly. Yellow to black silt loam. Price of improved land per acre, \$35.00; unimproved, \$15.00. Principal crops raised are corn, hay, stock peas, fruit, live stock and poultry.

RAW MATERIALS: Gravel; sand; sufficient quantity to warrant development.

SPECIAL INDUCEMENTS: Excellent river facilities with two double track inclines for transfer of freight between cars and barges.

INDUSTRIES NEEDED: All kinds.

BUSINESS AND PROFESSIONAL OPENINGS: Dry goods store.

KARNAK, PULASKI COUNTY, ILLINOIS

Population 771. Incorporated 1912. County seat, Mound City, Ill.

RAILROADS: Chicago & Eastern Illinois; Cleveland, Cincinnati, Chicago & St. Louis.

ELECTRIC LIGHT PLANT: Private; Main Brothers Box and Lbr. Co.

TELEPHONE SERVICE: Local and long distance; Illinois Commercial Telephone Co., Murphysboro, Ill.

SCHOOLS: 1 public grammar; 1 public high.

HOTEL: Walker, American plan.

CHURCHES: 1 Methodist; 1 Baptist; 1 Pentecost.

MUNICIPAL BUILDINGS: Post Office, rented, \$10.00 per month.

SURROUNDING COUNTRY: Bottom land, fertile brown silt loam and gray silt loam; hilly. Price of improved land per acre, \$20.00; unimproved, \$10.00. Principal crops raised are corn, wheat, vegetables, fruit, poultry and live stock.

RAW MATERIALS: White clay; sand; timber. Timber developed. Others sufficient in quantity to warrant development.

SPECIAL INDUCEMENTS: Good sites; plenty of labor.

INDUSTRIES NEEDED: Wood products plant; canning factory.

BUSINESS AND PROFESSIONAL OPENINGS: Bank; dentist.

KELL, MARION COUNTY, ILLINOIS

Population 400. Incorporated 1925. County seat, Salem, Ill.

BUSINESS AND PROFESSIONAL OPENINGS: Opportunities at all times. Evansville is a city of steady onward growth and a bright future.

EVANSVILLE, INDIANA

(By A. P. Eberlin, Secretary Evansville Chamber of Commerce)

Located at the extreme southern end of the C. & E. I. system, and built on the crescent of the Ohio River, Evansville, Indiana, is approximately 90 miles south by west of the center of population of the United States. Over half of the population of the United States, or about sixty million people live within a radius of 600 miles of Evansville.

Agriculture

Evansville is located in the center of a very fertile and productive agricultural district. From the rich fields of the Ohio River Valley comes a production of grains which is equalled in very few districts of the Central United States.

To the north where we have a more rolling land, we not only find an abundance of grains being produced, but large orchards of apples and peaches and numerous market gardens which produce garden vegetables during the most of the year. In the outskirts of the city many large greenhouses are found which are engaged in the production of vegetables during the entire year.

In addition to this district being a great grain producing section, it also produces thousands of dollars worth of live stock, each year. Besides being a great dairy section, many of the farmers are engaged in the raising of swine, some in sheep, and in

the past few years poultry has become one of the leading industries of the farming sections. A large percentage of this stock finds a ready market at the Evansville Stock Yards.

Manufacturing

Evansville is primarily an industrial city; in fact, a great manufacturing center having within its boundaries more than 230 industries. Among the products manufactured are: auto trucks, auto bodies, steam shovels, electric and gas refrigerators, gas engines, agricultural implements, tools, glass bottles, electric headlights, infant foods, grain products, brick, brooms, stoves, cigars and furniture. Some of these products are known and used the world over.

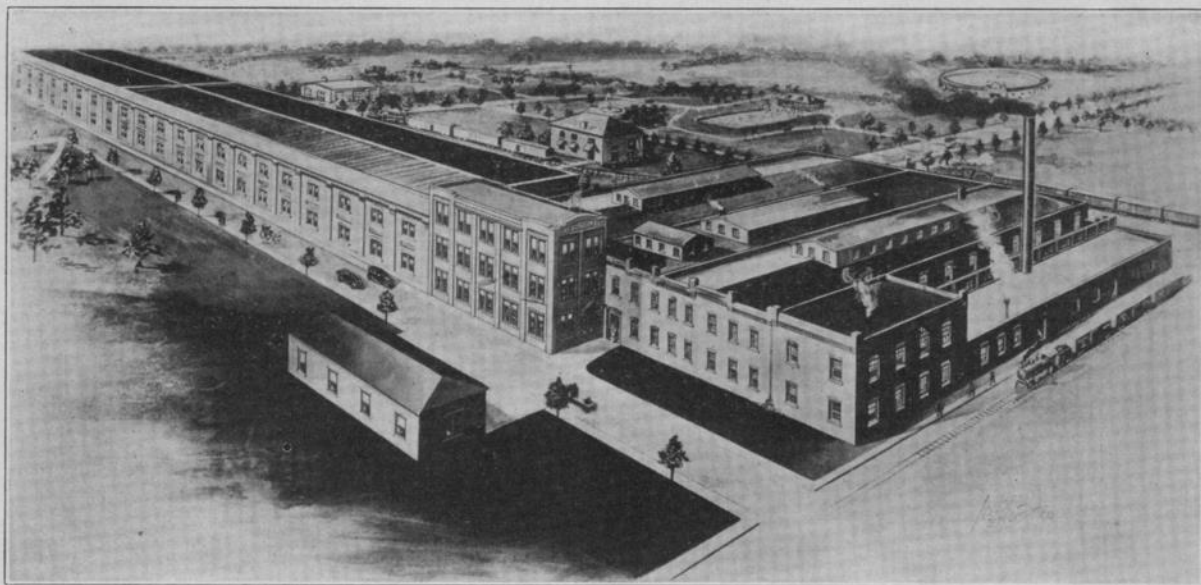

Industrial Possibilities

Evansville's location is ideal for manufacturing; near the center of population, with an abundant labor supply, small labor turnover, cheap fuel, good rail and water transportation and proximity to large markets make it a good industrial city. Industries seeking new locations are invited to look over the manufacturing advantages this city has to offer. Good industrial sites are available at reasonable cost.

Finance

There are fourteen national and state banks in the city of Evansville having combined resources of more than \$66,784,005. In addition, there are ten building and loan associations with combined assets of \$7,100,000, and three finance and industrial loan companies with combined assets of more than \$1,600,000. This gives Evansville a total banking strength of \$75,484,005.

Evansville is a sound financial city, in that its industries are widely diversified and of such a nature that this city suffers none of the so-called slumps,

EVANSVILLE, IND.—Continued

to any noticeable extent. Production is constantly increasing, with bank clearances growing steadily with it.

Building and Housing

Evansville's housing conditions are good. The shortage of homes that existed during the war has been overcome by the steady building that has been going on for the past ten years, and today the new-comer is assured of finding a pleasant home at reasonable rental. Building construction for the year 1930 totalled \$278,614,002. Fifty per cent of the

C. & E. I. Main Freight Station, Evansville, Ind.

people own their own homes. There are three modern hotels in Evansville.

Utility Service

Power, light and gas is furnished by the Southern Indiana Gas & Electric Company. This plant served in 1930, 29,813 individuals and industries with light and power and 16,383 consumers with gas. Capacity power plant 32,800 K. W. Capacity gas plant 6,000,000 Cubic Feet Daily

Power rates are very reasonable; an abundance of cheap fuel, up-to-date machinery and efficient management and labor are mainly responsible for our low rates.

Natural gas is now in our city limits.

Schools

Under the constructive and capable direction of the Board of Education, Evansville's educational system has developed to a high state of efficiency. The public schools have an average of one teacher to every twenty-six pupils. The high schools of the city have Student Government. Under this form of government the students govern themselves in all matters relating to conduct; it has developed a sense of responsibility and honor among the older students and has proven very satisfactory.

Ample recreational facilities and playgrounds are provided at all schools and the management encourages the students in sports of all kinds. There are:

- | | |
|-----------------------|--------------------|
| 5 High Schools. | 1 Business School. |
| 12 Parochial Schools. | 2 Music Schools. |

18 Elementary Public Schools.

Colleges

Evansville College is one of the outstanding educational landmarks of Southwestern Indiana. Situ-

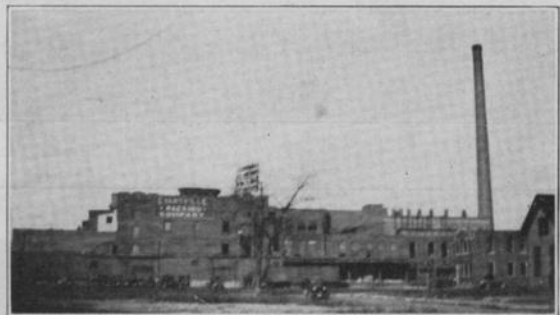

ated within the city limits, the college grounds comprising 70 acres present a wonderful setting for the Administration Building which cost \$350,000.

As a result of efficient administration the College is increasing in popularity. During 1930 the enrollment numbered more than 1,000. The following courses are furnished: Liberal Arts, Engineering, Business Administration, Music, Education, Teachers' Training and Extension work. Work done by the College in the engineering department on the co-operative plan with local industries is very unusual and gives the boys advantage of partical experience.

Recreation

Evansville has an abundance of good wholesome entertainment and recreation. The City Park Board recently created a Recreation Department with a Director in Charge. This Department has done much to stimulate the public's interest in sports and entertainment. We have:

- | | |
|---------------------------------------|---------------------|
| 14 Parks. | 3 Golf Courses. |
| 1 Zoo. | 1 Amusement Park. |
| 5 Swimming Pools. | 1 League Ball Park. |
| 14 Tennis Courts. | 15 Movie Houses. |
| 1 College Stadium. | |
| 4 High School Stadiums for Athletics. | |
| 1 Bathing Beach on the Ohio River. | |
| 1 Museum of Fine Arts and History. | |

Evansville Packing Co.

The cultural values are recognized and developed for the community at large by the Society of Fine Arts and History, at its Temple, which was established in 1926, and is located at 216 N. W. Second street.

The Society has an art gallery; among its treasures of pioneer history are a wooden chest of drawers made by Abraham Lincoln, a corner cupboard made of cherry wood, by his father, Thomas Lincoln; large collections of Indian relics and Oriental and South American objects; war relic gallery; natural history collections of local fauna; lectures every Thursday night on industrial application of the fine arts; also their historical development; the Evans-

ville Pallette and Chisel Club holds studio classes Friday nights. Museum open to public, admission free, hours 10:00 to 12:00 A. M. and 1:00 to 5:00 P. M. daily; Sunday 2:00 to 5:00 P. M. Public invited.

Evansville Zoo

The Evansville Zoo, one of the most up-to-date of its kind in the Central West, draws thousands of visitors from the Tri-State section each year. Located in Mesker Park, it is one of Evansville's outstanding attractions.

The Zoo has in its collections, elephant, lions, buffalo, elk, deer, bear, puma, aoudad, sasin antelope, ocelet, coat of mundi, monkey, coyotes, fox and many other smaller animals and quite a variety of birds. Many other birds and animals are being added from time to time. The animals are housed in the recently erected Main Animal Building.

Municipal Golf Course

Because of its natural hazards, the Municipal Golf Course ranks third best in the United States.

The Chicago & Eastern Illinois Railway in Evansville

The C. & E. I. Railway Co. affords exceptional facilities for handling freight throughout the city and its environs. It owns and operates a belt line encircling the city, and on the belt line are provided team tracks at three points for the convenience of shippers and receivers in the loading and unloading of their cars. The company also operates freight stations and team tracks at Eighth and Locust streets and at 19th and West Franklin streets.

INDUSTRIES NEEDED: Textile, canning plant and greenhouse.

BUSINESS AND PROFESSIONAL OPENINGS: Opportunities considered favorable for all.

TERRE HAUTE, IND.

By Morton Hayman, Executive Secretary,
Terre Haute Chamber of Commerce

Terre Haute, Ind., is situated on the east bank of the Wabash river, on the main lines of traffic from Chicago to the South and between New York and St. Louis. Four trunk line railroad systems serve Terre Haute—C. & E. I. main line north and south, the main lines east and west of the Pennsylvania and New York Central systems, and into the northwest, the lines of the C., M., St. P. & P.

Dresser Field, Terre Haute's municipal airport, is located less than three miles from the downtown business district on U. S. highway No. 41. This airport is one of the outstanding airports of the country. It is the intersection of the Chicago-Atlanta air mail route and the New York-Los Angeles route of the Transcontinental & Western Air.

The 1930 U. S. census gives Terre Haute and its environs a population of 74,214. Trade area around the city is larger than other Indiana cities because of a metropolitan location in what is known as the "Wabash Valley Empire"—a rich agricultural and mining area.

One hundred and fifty-seven (157) well diversified industries are located in Terre Haute. The largest of these are plants of the American Car & Foundry Company, American Can Company, Columbian Enameling & Stamping Company, Commercial Solvents Corporation, J. W. Davis & Co., Grasselli Chemical Company, Highland Iron & Steel Company, Indiana Consumers Gas & By-Products Company, Indiana Wood Preserving Company, Loudon Packing Company, F. Prox Boiler Works, Quaker Maid Company, Inc., Root Glass Company, Smith-Alsop Paint & Varnish Company, Terre Haute Advertising Company, Terre Haute Boiler Works, Terre Haute Electrotypes Company, Terre Haute Engraving Company, Terre Haute Malleable & Manufacturing Company, Terre Haute Paper Company, Terre Haute Terminal Elevator Corporation, Unique Printed Products Com-

Terre Haute, Ind.

TERRE HAUTE, IND.—Continued

pany, U. S. Powder Company, Wabash Fibre Box Company and the Winslow Scale Company.

The Dresser Super-Power plant of the Indiana Electric Corporation is located at Terre Haute on the Wabash river. This power plant has a 60 K.W.H. capacity and is a \$17,000,000 concern.

Terre Haute industries have a wage payroll annually of \$11,761,699.70 and employ 9,645 people. The value of its annual production is \$68,409,561.69. Terre Haute industries are not in competition with the labor market of the large industrial metropolises of the central west because of its location with none of these centers within 75 miles. Its labor is intelligent, contented and plentiful—drawing as it does from its "Wabash Valley" population of 250,000.

Over 65 per cent of Terre Haute's families are home owners.

Its financial institutions are known throughout the Central West for their conservatism and strength. In its eight banks are deposits of over \$32,000,000.00. Bank clearings for 1930 were \$281,393,408.68. Fourteen Building and Loan associations with resources of \$24,070,464.87 have 13,517 borrowing members and 18,533 depositing members.

Educational opportunities in Terre Haute are outstanding with three colleges—Indiana State Teachers' College with an annual enrollment of over 3,000; Rose Polytechnic Institute with a limited enrollment of 350; and St. Mary-of-the-Woods, a Roman Catholic girls' college, with an investment of nearly \$10,000,000.00 in its buildings. The public schools of Terre Haute rank high in educational opportunities—two Senior High schools, a Technical High school, three Junior High schools and nineteen Grammar schools with an enrollment of 13,000 students. Six Parochial schools have an enrollment of 1,265.

Two important U. S. transcontinental highways intersect in Terre Haute—the National highway, now known as U. S. Route No. 40, and the Dixie B highway, now known as U. S. Route No. 41, besides 220 miles of paved highways entering Terre Haute within the county.

in two excellent municipal golf courses, two large swimming pools, a municipal stadium seating 16,000 people and 520 acres of public parks. The largest of these is Deming Park, located on the bluffs east of the city, which is one of the beautiful natural parks in this country, equipped with picnic ovens well stocked with cord wood for the convenience of tourists and citizens of Terre Haute. Three private country clubs and golf courses, all members of the Western Golf Association, provide a means of more exclusive recreation. Two of them are open during the entire year.

Five large downtown theaters offer a varied

RAW MATERIALS: Limestone and timber, both sufficient in quantity to warrant development.

SPECIAL INDUCEMENTS: Provide factory site, help finance.

INDUSTRIES NEEDED: Any kind of factory employing male labor.

ST. LOUIS, MO.

St. Louis is well known for its production of shoes, assembling of automobiles, printing and publishing, slaughtering, reduction of aluminum, zinc and lead ores, manufacture of patent and proprietary medicines and compounds, electric apparatus, electric and steam railroad cars, foundry products, chemicals and clay products.

St. Louis is not a "one industry city." Its great strength and stability lie in the wide variety and diversification of its products and commerce.

St. Louis is a great primary market for raw materials, one of the leading industrial centers of this country and an important jobbing point. The growing importance of St. Louis as a distributing center is shown by the increased warehousing facilities now under construction, the St. Louis Mart, a twenty-story \$5,000,000 structure, combining under one roof offices, display and storage rooms and the Industrial Terminal Building with twelve main stories covering a city block with four offset office stories above. In this building storage and shipping will be concentrated on the lower floors, the upper floors being reserved for manufacturers and distributors.

The Phillips Pipe Line are building a \$3,000,000 terminal in the district for their eight-inch pipe line that will bring gasoline from West Texas to St. Louis for distribution over a wide section. This is only one of a number of pipe lines reaching the St. Louis district from the Southwest bringing crude oil, natural gas and gasoline in ever increasing volume.

The St. Louis district constitutes the second largest railroad terminal in the United States, served by nineteen trunk line railroads, operating thirty lines. These trunk lines, with the parent and subsidiary companies, constitute 49.64 per cent of the total railroad mileage in this country.

The St. Louis package car system has been developed into the best delivery service radiating from any city in this country.

ST. LOUIS, MO.—Continued

St. Louis is served by one of the largest interconnected electrical power systems in America and this supply is being further increased by the thirty-million-dollar hydro-electric power plant now being completed at Bagnell, Mo., which will have an initial capacity of 200,000 horse power.

St. Louis industries are served with natural gas from the Monroe and Richland gas fields of Louisiana by a 450-mile pipe line, 22 inches in diameter, having an initial capacity of 100,000,000 cubic feet of gas per day.

St. Louis lies at the west-central edge of the extensive Eastern Interior coal field, the natural focus of large tonnages at comparatively low freight cost.

St. Louis has a larger percentage of native-born industrial workers than any other large city in the Middle West and a much larger percentage than most Eastern manufacturing cities, large or small.
