SOUTHERN RAILWAY SYSTEM

FREIGHT TRAIN SCHEDULES AND BLOCKING INSTRUCTIONS

The instructions contained herein pertaining to schedules and blocking are the basic guidelines for the movement of traffic within a modern transportation system.

The advancements made in the transportation field in the past years have resulted in a highly competitive industry. In order to be a successful competitor in the flow of traffic moving through the territory we serve, it is most important that every employee perform his assignment to the utmost of his ability.

The instructions contained herein are to be used to bring about a dependable movement of traffic over our system. The timely dispatch of trains from terminals and moving traffic in the proper block on the proper train are the primary goals of each and every employee.

Only by maintaining our schedules and blocking of traffic can we be successful in our endeavors to be a successful competitor. The success of our performance can only be measured by our continual growth in the transportation industry.

No changes are to be made in schedules or blocking without authority from the proper party.

P. R. Rudder
Vice President
Transportation
