**SOUTHERN PACIFIC
INDUSTRIAL NUMBERING SYSTEM**

HOUSTON
NUMERICAL

REVISED
OCTOBER 10, 1975

SOUTHERN PACIFIC COMPANY
TEL. LINES

OFFICE OF THE TERMINAL SUPERINTENDENT

HOUSTON
TERMINAL INDUSTRIAL DIRECTORY

The Industrial Directory is prepared both Numerically and Alphabetically under the "S-P-I-N-S-V-S-T-E-M". Spins is a standard method of identifying industries and switching zones, tracks and consignee loading and unloading spots. By giving zones, tracks and spots certain designated numbers, we are able to print switch list with the exact location to which a customer's car is to be spotted.

A Spins number contains up to six digits. The first two digits indicate the zone to which the car is destined, the next two digits indicate the track number within the zone, the last two digits are the actual spot or coded spot.

EXAMPLE: Spins coded 274104 means that the car is for Zone 27, Track 41, Spot 04 on that track.

Zone and track number appear on switch targets, spot signs are placed where customers normally load or unload their cars.

Spot signs are 6"x6" Green metal signs with 4" white reflectorized numbers. These signs are placed at the center of a car spot for spotting if possible from either side of car.

Procedures listed below must be complied with in filling out the printed lists.

1. Cars properly spotted or placed opposite each show the letter "S" and write time placed to the nearest hour.
2. Cars not spotted according to list, opposite each show "00" for off spot code, actual location-track and or where car was placed and reason why car could not be spotted.
3. Cars pulled from the industry opposite each show the letter "P" write the time to the nearest hour, if car is left in the industrial area, show track and time.
4. Respotted or switched car, opposite each show the letter "R" write the time to the closest hour, show new location (Zone, Track and Spot).
5. Write job number, date, name and on duty time on all list in space provided.
6. Any cars not shown on the printed list and are pulled from an industry, write car initial and number as well as track pulled from on the Zone-Pull list.
7. Return finished printed spot, pull list and Industry Switch list as soon as possible to instructed office.

NUMERICAL LISTING:

Track numbers are listed in four digits. The first and second digits are the "ZONE" number, the third and fourth digits indicating the Track number, the fifth and sixth digits indicate spot numbers for the industry.

ALPHABETICAL LISTING:

This is the same as Numerical listing.

SPECIAL SPOT NUMBERS:

The last two digits of a SPINS number may convey a special meaning and listed below:

89	Tank Spot
90	Team Track Spotting
91	Storage Track
92	Industries that do their own switching or put out a switch list
93	Crane Spotting
94	Hopper dump for feed, grain, cement, etc.
95	Dock Spotting
96	Piggy Back Ramp
97	Auto Ramp
98	Interchange to other railroads
99	For spotting cars on a track or a mill run basis where it is not possible to place a spot sign
00	When a car cannot be spotted according to the switch list and left off spot, 00 will be indicated on the returned list. If car is left on a track other than designated on list, track number where car is left will be shown in addition to 00.

(*) Asterisk on each side of spot number indicates preferred spot.
